Chapter 2

Investing and Financing Decisions and the Accounting System

ANSWERS TO QUESTIONS

1.
 - (a) The separate entity assumption requires that business transactions are separate from the transactions of the owners. For example, the purchase of a truck by the owner for personal use is not recorded as an asset of the business.
 - (b) The monetary unit assumption requires information to be reported in the national monetary unit without any adjustment for changes in purchasing power. That means that each business will account for and report its financial results primarily in terms of the national monetary unit, such as Yen in Japan and Australian dollars in Australia.
 - (c) Under the going concern assumption, businesses are assumed to operate into the foreseeable future. That is, they are not expected to liquidate.
 - (d) The historical cost principle is a measurement model that requires assets to be recorded at the cash-equivalent cost on the date of the transaction. Cash-equivalent cost is the cash paid plus the dollar value of all noncash considerations. TBEXAM.COM
2. Accounting assumptions are necessary because they reflect the scope of accounting and the expectations that set certain limits on the way accounting information is reported.
3.
 - (a) An asset is an economic resource owned or controlled by a company; it has measurable value and is expected to benefit the company by producing cash inflows or reducing cash outflows in the future.
 - (b) A current asset is an asset that will be used or turned into cash within one year.
 - (c) A liability is a measurable obligation resulting from a past transaction; it is expected to be settled in the future by transferring assets or providing services.
 - (d) A current liability is a short-term obligation that will be paid in cash (or other current assets) within the current operating cycle or one year, whichever is longer.
 - (e) Additional paid-in capital is the owner-provided financing to the business that represents the amount of contributed capital less the par value of the stock.
 - (f) Retained earnings are the cumulative earnings of a company that are not distributed to the owners and are reinvested in the business.

4. An account is a standardized format used by organizations to accumulate the dollar effects of transactions on each financial statement item.
5. The accounting equation is: $\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$
6. A business transaction is:
 - (a) an exchange of resources (assets) and obligations (debts) between a business and one or more outside parties, and
 - (b) a measurable internal event that directly affects the entity but where there is no exchange with external parties.

An example of situation (a) is the sale of goods or services to customers.

An example of situation (b) is the use of equipment in operations.

7. Debit is the left side of a journal entry and T-account and credit is the right side of a journal entry and T-account. A debit is an increase in assets and a decrease in liabilities and stockholders' equity. A credit is the opposite -- a decrease in assets and an increase in liabilities and stockholders' equity.

8. Transaction analysis is the process of studying a transaction to determine its economic effect on the entity in terms of the accounting equation:

$$\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$$

The two principles underlying the process are:

- * every transaction affects at least two accounts.
- * the accounting equation must remain in balance after each transaction.

The three steps in transaction analysis are:

- (1) determine what the company **received**: identify and classify accounts and the direction and amount of the effects.
- (2) determine what the company **gave**: identify and classify accounts and the direction and amount of the effects.
- (3) determine that the accounting equation ($A = L + SE$) remains in balance.

9. The equalities that must be maintained in transaction analysis are:
 - (a) $\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$
 - (b) $\text{Debits} = \text{Credits}$
10. A journal entry is an accounting method for expressing the effects of a transaction on accounts in a debits-equal-credits format. The title(s) of the account(s) to be debited is (are) listed first and the title(s) of the account(s) to be credited is (are) listed underneath the debited accounts. The debited amounts are placed in a left-hand column and the credited amounts are placed in a right-hand column.

11. The T-account is a tool for summarizing transaction effects for each account, determining balances, and drawing inferences about a company's activities. It is a simplified representation of a ledger account with a debit column on the left and a credit column on the right.
12. The current ratio is computed as current assets divided by current liabilities. It measures a company's liquidity -- the ability of the company to pay its short-term obligations with current assets. A ratio above 1.0 normally suggests that the company has sufficient current assets to settle short-term obligations. Sophisticated cash management systems allow many companies to minimize funds invested in current assets and have a current ratio below 1.0. However, a ratio that is too high in relation to other competitors in the industry may indicate inefficient use of resources.
13. Investing activities on the statement of cash flows include the buying and selling of productive assets and investments. Financing activities include borrowing and repaying debt, issuing and repurchasing stock, and paying dividends.

* Due to the nature of these cases and projects, it is very difficult to estimate the amount of time students will need to complete the assignment. As with any open-ended project, it is possible for students to devote a large amount of time to these assignments. While students often benefit from the extra effort, we find that some become frustrated by the perceived difficulty of the task. You can reduce student frustration and anxiety by making your expectations clear. For example, when our goal is to sharpen research skills, we devote class time to discussing research strategies. When we want the students to focus on a real accounting issue, we offer suggestions about possible companies or industries.

MINI-EXERCISES

M2-12.

**JonesSpa Corporation
Balance Sheet
At January 31**

Assets*Current assets:*

Cash	\$ 16,400
Notes receivable	11,000
Total current assets	<u>27,400</u>

Equipment	30,100
	<u> </u>

Total Assets	<u>\$ 57,500</u>
---------------------	-------------------------

Liabilities*Current liabilities:*

Notes payable	\$ 43,000
Dividends payable	2,000
Total current liabilities	<u>45,000</u>

Stockholders' Equity

Common stock	1,010
Additional paid-in capital	3,490
Retained earnings	8,000
Total stockholders' equity	<u>12,500</u>

Total Liabilities & Stockholders' Equity	<u>\$ 57,500</u>
---	-------------------------

M2-13.

Current Ratio =

	<u>Current Assets</u>	÷	<u>Current Liabilities</u>	
2018	<u>\$280,000</u>	÷	<u>\$155,000</u>	= <u>1.806</u>
2019	<u>\$270,000</u>	÷	<u>\$ 250,000</u>	= <u>1.080</u>

This ratio indicates that Matteo's Taco Company has sufficient current assets to settle current liabilities, but that the ratio has also decreased between 2018 and 2019 by .726 (40%). Matteo's Taco Company ratio of 1.080 is lower than Chipotle's 2019 ratio of 1.609, indicating that Matteo's Taco Company appears to have weaker liquidity than Chipotle. Because the restaurant industry typically has high immediate cash inflows from customers, both companies can maintain a lower current ratio.

M2-14.

- (a) F
- (b) I
- (c) F
- (d) I

Transaction (e) for the declaration of cash dividends creates an obligation. Thus, it would not be included on the statement of cash flows because no cash was paid in January.

Req. 1

	<u>Received</u>	<u>Given</u>
(a)	Cash (A)	Common stock and Additional paid-in capital (SE)
(b)	Equipment (A) <i>[or Delivery truck]</i>	Cash (A)
(c)	<i>No exchange transaction</i>	—
(d)	Equipment (A) <i>[or Computer equipment]</i>	Notes payable (current) (L)
(e)	Building (A) <i>[or Construction in progress]</i>	Cash (A)
(f)	Intangibles (A) <i>[or Copyright]</i>	Cash (A)
(g)	Retained earnings (SE) <i>[Received a reduction in the owners' claims to the company's assets]</i>	Dividends payable (L) <i>[a promise to pay]</i>
(h)	Land (A)	Cash (A)
(i)	Intangibles (A) <i>[or Patents]</i>	Cash (A) and Notes payable (current) (L)
(j)	<i>No exchange transaction</i>	—
(k)	Investments (A)	Cash (A)
(l)	Cash (A)	Notes payable (current) (L)
(m)	Notes payable (L) <i>[Received a reduction in its promise to pay]</i>	Cash (A)

Req. 2

The truck in (b) would be recorded as an asset of \$18,000. The land in (h) would be recorded as an asset of \$50,000. These are applications of the historical cost principle.

Req. 3

The agreement in (c) involves no exchange or receipt of cash, goods, or services and thus is not a transaction. Since transaction (j) occurs between the owner and others, there is no effect on the business because of the separate entity assumption.

E2-3.

Req. 3

Since transaction (d) is a personal purchase, not purchased by Precision Builders, there is no effect on the business due to the separate entity assumption.

Req. 4

Market value per share = Total assets received ÷ Number of shares issued
 = \$95,000 ÷ 3,000 shares issued
 = \$31.67 per share

E2-11.

Req. 1

Transaction	Brief Explanation
1	Issued common stock to shareholders for \$15,000 cash. (FastTrack Sports Inc. is a corporation because it issues stock. Par value of the stock was \$0.10 per share because \$1,500 common stock amount divided by 15,000 shares issued equals \$0.10 per share).
2	Borrowed \$75,000 cash and signed a short-term note for this amount.
3	Leased assets for \$135,000; paid \$5,000 cash and signed a long-term operating right-of-use lease for the balance.
4	Loaned \$1,000 cash; borrower signed a short-term note for this amount (Note Receivable).
5	Purchased store fixtures for \$9,500 cash.
6	Repaid \$4,000 cash on the notes payable.

Ending balances are reflected in the balance sheet in Requirement 2.

Req. 2

FastTrack Sports Inc.

Req. 4

Higgins Company Trial Balance For the Year Ended December 31		
	Debit	Credit
Cash	11,200	
Short-term investments	1,000	
Property and equipment	1,500	
Notes payable (<i>current</i>)		2,200
Dividends payable		0
Notes payable (<i>noncurrent</i>)		4,800
Common stock		500
Additional paid-in capital		4,000
Retained earnings		2,200
Totals	13,700	13,700

Req. 5

Higgins Company Balance Sheet At December 31	
Assets	
<i>Current Assets:</i>	
Cash	\$11,200
Short-term investments	1,000
Total current assets	12,200
Property and equipment	1,500
Total assets	\$13,700
Liabilities and Stockholders' Equity	
<i>Current Liabilities:</i>	
Notes payable	\$ 2,200
Total current liabilities	2,200
Notes payable	4,800
Total liabilities	7,000
<i>Stockholders' Equity</i>	
Common stock	500
Additional paid-in capital	4,000
Retained earnings	2,200
Total stockholders' equity	6,700
Total liabilities and stockholders' equity	\$13,700

E2-15. (continued)

Req. 6

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$11,200 + \$1,000}{\$2,200} = \frac{\$12,200}{\$2,200} = \mathbf{5.55}$$

This ratio indicates that, for every \$1 of current liabilities, Higgins maintains approximately \$5.55 of current assets. Higgins' ratio is higher than the industry average of 1.50, indicating that Higgins maintains a lower level of short-term debt compared to its current assets and has higher liquidity. However, maintaining such a high current ratio also suggests that the company may not be using its resources efficiently. Increasing short-term obligations would lower Higgins' current ratio, but this strategy alone would not help its efficiency. Higgins should consider investing more of its cash in order to generate future returns.

Total Liabilities	32,000

Stockholders' Equity

Common stock	10,000
Additional paid-in capital	<u>30,000</u>
Total Stockholders' Equity	40,000

Total Liabilities & Stockholders' Equity \$72,000

E2-16. (continued)

Req. 4

	<u>Current Assets</u>	÷	<u>Current Liabilities</u>	=	<u>Current Ratio</u>
2021	\$39,000	÷	\$16,000	=	2.44
2022	\$52,000	÷	\$23,000	=	2.26
2023	\$47,000	÷	\$40,000	=	1.18

The current ratio has decreased over the years, suggesting that the company's liquidity is decreasing. Although the company still maintains sufficient current assets to settle the short-term obligations, this steep decline in the ratio may be of concern – it may be indicative of more efficient use of resources or it may suggest the company is having cash flow problems.

Req. 5

The management of Bailey Delivery Company has already been financing the company's development through additional short-term debt, from \$16,000 in 2021 to \$40,000 in 2023. This suggests the company is taking on increasing risk. Additional lending to the company, particularly short-term, may be too much risk for the bank to absorb. Should the bank lend the \$50,000, Bailey Delivery Company's current ratio would be 1.08 (97,000 ÷ 90,000) immediately after the financing. Based solely on the current ratio, the bank's vice president should consider not providing the loan to the company as it currently stands. Of course, additional analysis would provide better information for making a sound decision.

E2-17.

Transaction	Brief Explanation
(a)	Issued 100,000 shares of common stock (par value \$0.02 per share) to shareholders in exchange for \$20,000 cash and \$5,000 of tools and equipment.
(b)	Loaned \$1,800 cash; borrower signed a note receivable for this amount.
(c)	Purchased a building for \$40,000; paid \$10,000 cash and signed a \$30,000 note payable for the balance.
(d)	Sold tools and equipment for \$900 cash (their original cost).

P2-2.

Req. 1

East Hill Home Healthcare Services was organized as a corporation. Only a corporation issues shares of common stock to its owners in exchange for their investment, as in transaction (a).

Req. 2 (On next page)

Req. 3

The transaction between the two stockholders (Event e) was not included in the tabulation. Since the transaction in (e) occurs between the owners, there is no effect on the business due to the separate entity assumption.

Req. 4

$$(a) \quad \text{Total assets} = \$119,500 + \$18,000 + \$5,000 + \$510,500 + \$160,000 + \$65,000 \\ = \$878,000$$

$$(b) \quad \text{Total liabilities} = \$108,000 + \$180,000 \\ = \$288,000$$

$$(c) \quad \text{Total stockholders' equity} = \text{Total assets} - \text{Total liabilities} \\ = \$878,000 - \$288,000 = \$590,000$$

$$(d) \quad \text{Cash balance} = \$50,000 + \$90,000 - \$9,000 + \$3,500 - \$18,000 - \$5,000 + 8,000 \\ = \$119,500$$

$$(e) \quad \text{Total current assets} = \text{Cash } \$119,500 + \text{Short-Term Investments } \$18,000 + \text{Notes} \\ \text{Receivable } \$5,000 = \$142,500$$

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$119,500 + \$18,000 + \$5,000}{\$108,000} = \frac{\$142,500}{\$108,000} = 1.32$$

For every \$1 in current liabilities, East Hill maintains approximately \$1.32 in current assets. The ratio suggests that East Hill is likely maintaining adequate liquidity and using resources efficiently.

P2-2. (continued)

Additional paid-in capital	46,641
Retained earnings	34,188
Total stockholders' equity	80,831

Total liabilities and stockholders' equity**\$359,661**

P2-5. (continued)

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$168,783}{\$118,254} = 1.43$$

For every \$1 of short-term liabilities, Apple Inc. has approximately \$1.43 of current assets. This suggests that Apple has sufficient current resources to pay current liabilities. Apple has a very efficient cash management system and keeps its current resources at lower levels to maximize investment opportunities.

AP2-2.

Req. 1

Russeck Incorporated was organized as a corporation. Only a corporation issues shares of common stock to its owners in exchange for their investment, as Russeck did in transaction (c).

Req. 2 (On next page)

Req. 3

Since the transaction in (g) occurs between the owners and others outside the company, there is no effect on the business due to the separate entity assumption.

Req. 4

$$(a) \text{ Total assets} = \$56,000 + \$2,000 + \$85,000 + \$110,000 + \$310,000 = \$563,000$$

$$(b) \text{ Total liabilities} = \$32,000 + \$211,000 = \$243,000$$

$$(c) \text{ Total stockholders' equity} = \text{Total assets} - \text{Total liabilities} \\ = \$563,000 - \$243,000 = \$320,000$$

$$(d) \text{ Cash balance} = \$120,000 + \$11,000 - \$3,000 + \$20,000 - \$5,000 - \$2,000 \\ - \$85,000 = \$56,000$$

$$(e) \text{ Total current assets} = \$56,000 + \$2,000 = \$58,000$$

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$56,000 + \$2,000}{\$32,000} = \frac{\$58,000}{\$32,000} = 1.81$$

This suggests that Russeck has sufficient liquidity to cover its current obligations. For every \$1 of current liabilities, Russeck has \$1.81 in current assets.

Retained earnings	76,442

Total stockholders' equity	<u>103,055</u>
----------------------------	----------------

Total liabilities and stockholders' equity	<u>\$255,543</u>
---	-------------------------

AP2-5. (continued)

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$74,692}{\$76,732} = 0.97$$

For every \$1 of short-term liabilities, Kiwi Inc. has approximately \$0.97 of current assets. This suggests that Kiwi has nearly sufficient current resources to pay current liabilities. It is likely that Kiwi has a very efficient cash management system and keeps its current resources at lower levels to maximize investment opportunities.

CON2-1. (continued)

Req. 6

	<u>Current Assets</u>	÷	<u>Current Liabilities</u>	=	<u>Current Ratio</u>
On March 31	\$11,500	÷	\$4,000	=	2.875

With a current ratio of 2.875, PPSS has liquidity with sufficient current assets to settle short-term obligations. However, this may change as the inventory is received in April and operations begin requiring paying cash for inventory purchases from suppliers, advertising, utilities, employee salary, and other operating needs, and paying notes payable when due. One of the most significant problems for new small businesses is generating sufficient cash from operations to pay obligations and maintain liquidity.

FINANCIAL REPORTING AND ANALYSIS CASES**CP2-4.**

Dollars are in thousands:

1. (a) Chipotle's total assets for the quarter ended June 30, 2020 are \$5,370,129.

(b) Current liabilities increased over six months from \$666,593 at December 31, 2019, to \$723,178 on June 30, 2020.

$$(c) \text{ Current Ratio at } 6/30/20 = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$1,150,343}{\$723,178} = 1.591$$

Chipotle's current ratio decreased from the level of 1.609 on December 31, 2019 (as discussed in the chapter) to 1.591 on June 30, 2020. This indicates that, between December 31, 2019, and June 30, 2020, Chipotle decreased its liquidity slightly. Current assets increased by 7.3% while current liabilities increased by a greater percentage of 8.5%. When the denominator increases at a higher rate than the numerator, the ratio decreases.

2. (a) For the six months ended June 30, 2020, Chipotle spent \$165,455 on the purchase of leasehold improvements, property, and equipment.

TBEXAM.COM

(b) The total cash flows used in financing activities was a cash outflow of \$104,203, over half of which was from the \$54,501 repurchase of Chipotle's stock from investors (called "treasury stock").

CP2-5.

The major deficiency in this balance sheet is the inclusion of the owner's personal residence as a business asset. Under the separate entity assumption, each business must be accounted for as an individual organization, separate and apart from its owners. The improper inclusion of this asset as part of Frances Sabatier's business:

- Overstates total assets by \$300,000; total assets should be \$105,000 rather than \$405,000, and
- Overstates stockholders' equity that should be only \$5,000, rather than \$305,000.

Since current assets and current liabilities were not affected, the current ratio remains the same. However, other ratios involving long-term assets and/or stockholders' equity will be affected.

CP2-6.

Dollars are in thousands:

1. The company is a corporation because its owners are referred to as "stockholders."

$$2. \quad \text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$$

$$\$12,703,389 = \$3,999,003 + \$8,704,386$$

$$3. \quad \frac{\text{Current Assets}}{\text{Current Liabilities}} = \text{Current Ratio}$$

2019	\$7,620,075	\$ 832,476	9.154
2018	\$7,111,036	\$1,516,311	4.690

In 2019, for every \$1 of current liabilities, Twitter maintained approximately \$9.15 of current assets, suggesting that Twitter is highly liquid and has the ability to pay its short-term obligations with current assets in the upcoming year. Since 2018, the current ratio has increased from 4.69. The interpretation of this ratio would be more useful given information on the company's current ratio compared to the current ratio for the industry and/or competitors and additional years of data to observe trends.

$$4. \quad \begin{array}{l} \text{Accounts payable (-L)} \dots\dots\dots 161,148 \\ \text{Cash (-A)} \dots\dots\dots 161,148 \end{array}$$

5. Until 2019, Twitter reported an **Accumulated Deficit**, suggesting that the company was not profitable through 2018. It appears that Twitter was profitable in 2019, based on a positive amount in Retained Earnings of \$11,586. Note that the Accumulated Deficit account in 2018 represented the cumulative losses of the firm since the business began, assuming no dividends were declared (likely given its deficit position). The current year's retained earnings represents the cumulative earnings of the company that are not distributed to the stockholders and are reinvested in the business.

In addition, Twitter appears profitable in the most recent year because the company's Accumulated Deficit became retained earnings (due to further profits). It is possible to determine the amount of net income by using the following equation, assuming no dividends were declared:

(in thousands)

Beginning	For the Year			Ending		
<u>Accum. Deficit</u>	+	<u>Net Income(Loss)</u>	-	<u>Dividends declared</u>	=	<u>Retained Earnings</u>
\$(1,454,073)	+	\$?	-	\$ 0	=	\$11,586

Thus, net income for the most recent year was \$1,465,659.

CP2-7. (continued)

Req. 2

Dear _____,

I corrected the balance sheet for LettuceDoThis.Com, Inc. Primarily, I reduced the amount reported for buildings to \$60,000, which is the historical cost less any depreciation. Estimated market value is not a generally accepted accounting principle for recording property, plant, and equipment. The \$38,000 difference (\$98,000 – \$60,000) reduces total assets and reduces retained earnings. In fact, retained earnings becomes negative suggesting that there may have been several years of operating losses.

Before making a final decision on investing in this company, you should examine the past three years of *audited* income statements and the past two years of *audited* balance sheets to identify positive and negative trends for this company. You can also compare this company's current ratio to that of the industry to assess trends in liquidity, and compare how this company's long-term debt as a proportion of stockholders' equity has changed over time. You should also learn as much about the industry as you can by reviewing recent articles on economic and technological trends that may have an impact on this company.

TBEXAM.COM

CP2-8.

1. The most obvious parties harmed by the fraud at Celadon Group, Inc., were the stockholders and creditors. Stockholders were purchasing shares of stock that were inflated due to the fraud. Creditors were lending funds to the company based on inflated income statement and balance sheet information. When the fraud was discovered, the stock price dropped causing the stockholders to lose money on their investments. In addition, the creditors have a lower probability of receiving full payment on their loans.

Those who were helped initially by the fraud included the former executives who were able to receive substantial bonuses based on the inflated results of operations. However, several of the top executives at Celadon and its subsidiaries have been charged with fraud and other violations.

2. Celadon likely set certain financial goals and tied the former executives' bonuses to meeting the goals. Adopting targets is a good tool for monitoring progress toward goals and identifying problem areas, such as rising costs or sagging sales. Better decision making can result by heading off potential problems before they grow too large. However, setting unrealistic financial targets, especially in poor economic times, can result in those responsible for meeting the targets circumventing appropriate procedures and policies for their own benefit.
