Managerial Accounting Edition 18 by Garrison

CORRECT ANSWERS ARE LOCATED IN THE 2ND HALF OF THIS DOC.

MULTIPLE CHOICE - Choose the one alternative that best completes the statement or answers the question.

- 1) Which of the following statements are true?
 1. A cost driver is a factor, such as machine-hours, beds occupied, computer time, or flight-hours, that causes direct costs.
 2. Job-order costing systems often use allocation bases that do not reflect how jobs actually use overhead resources.
 3. An employee time ticket is an hour-by-hour summary of the employee's activities throughout the day.
 - A) Only statement I is true.
 - B) Statements I and II are true.
 - C) Statements II and III are true.
 - D) All of the statements are true.
- 2) Which of the following statements are true?
 1. The formula for computing the predetermined overhead rate is: $\text{Predetermined overhead rate} = \text{Estimated total amount of the allocation base} \div \text{Estimated total manufacturing overhead cost}$
 2. Generally speaking, when going through the process of computing a predetermined overhead rate, the estimated total manufacturing overhead cost is determined before estimating the amount of the allocation base.
 - A) Only statement I is true.
 - B) Only statement II is true.
 - C) Both of the statements are true.
 - D) Neither of the statements are true.
- 3) Which of the following statements are true?
 1. If a job is not completed at year end, then no manufacturing overhead cost would be applied to that job when a predetermined overhead rate is used.
 2. Actual overhead costs are not assigned to jobs in a job costing system.
 3. The amount of overhead applied to a particular job equals the actual amount of overhead caused by the job.
 - A) Only statement I is true.
 - B) Only statement II is true.
 - C) Statements II and III are true.
 - D) All of the statements are true.

Managerial Accounting Edition 18 by Garrison

- 4) Which of the following statements are true?
1. Job cost sheets contain entries for actual direct material, actual direct labor, and actual manufacturing overhead cost incurred in completing a job.
 2. A job cost sheet is used to record how much a customer pays for the job once the job is completed.
- A) Only statement I is true.
 B) Only statement II is true.
 C) Both of the statements are true.
 D) Neither of the statements are true.
- 5) Which of the following statements are true?
1. In a job-order costing system, indirect labor is assigned to a job using information from the employee time ticket.
 2. If the allocation base in the predetermined overhead rate does not drive overhead costs, it will nevertheless provide reasonably accurate unit product costs because of the averaging process.
 3. In a job-order costing system, costs are traced to individual units of product. The sum total of such traced costs is called the unit product cost.
- A) Only statement I is true.
 B) Statements I and II are true.
 C) Statements II and III are true.
 D) None of the statements are true.
- 6) Which of the following statements are true?
1. The fact that one department may be labor intensive while another department is machine intensive explains in part why multiple predetermined overhead rates are often used in larger companies.
 2. A company will improve job cost accuracy by using multiple overhead rates even if it cannot identify more than one overhead cost driver.
 3. The appeal of using multiple departmental overhead rates is that they presumably provide a more accurate accounting of the costs caused by jobs.
- A) Only statement I is true.
 B) Statements I and III are true.
 C) Statements II and III are true.
 D) None of the statements are true.

Managerial Accounting Edition 18 by Garrison

- 7) Which of the following statements are true?
1. The costs attached to products that have not been sold are included in ending inventory on the balance sheet.
 2. In absorption costing, nonmanufacturing costs are assigned to units of product.
 3. Most countries require some form of absorption costing for external reports.
- A) Only statement I is true.
 B) Only statement II is true.
 C) Statements I and III are true.
 D) All of the statements are true.
- 8) Which of the following statements are true?
1. A bill of materials is a document that lists the type and quantity of each type of direct material needed to complete a unit of product.
 2. An employee time ticket is used to record points that are earned by employees based on the hours they worked that can be used to pay for coffee, food in the cafeteria, and even in some cases for vacation travel.
- A) Only statement I is true.
 B) Only statement II is true.
 C) Both of the statements are true.
 D) Neither of the statements are true.
- TBEXAM.COM
- 9) In a job-order costing system that is based on machine-hours, which of the following formulas is correct?
- A) $\text{Predetermined overhead rate} = \text{Actual manufacturing overhead} \div \text{Actual machine-hours}$
 - B) $\text{Predetermined overhead rate} = \text{Actual manufacturing overhead} \div \text{Estimated machine-hours}$
 - C) $\text{Predetermined overhead rate} = \text{Estimated manufacturing overhead} \div \text{Estimated machine-hours}$
 - D) $\text{Predetermined overhead rate} = \text{Estimated manufacturing overhead} \div \text{Actual machine-hours}$

Managerial Accounting Edition 18 by Garrison

- 10) Which of the following is the correct formula to compute the predetermined overhead rate?
- A) Predetermined overhead rate = Estimated total units in the allocation base ÷ Estimated total manufacturing overhead costs
 - B) Predetermined overhead rate = Estimated total manufacturing overhead costs ÷ Estimated total units in the allocation base
 - C) Predetermined overhead rate = Actual total manufacturing overhead costs ÷ Estimated total units in the allocation base
 - D) Predetermined overhead rate = Estimated total manufacturing overhead costs ÷ Actual total units in the allocation base.
- 11) Assigning manufacturing overhead to a specific job is complicated by all of the below except:
- A) Manufacturing overhead is an indirect cost that is either impossible or difficult to trace to a particular job.
 - B) Manufacturing overhead is incurred only to support some jobs.
 - C) Manufacturing overhead consists of both variable and fixed costs.
 - D) The average cost of actual fixed manufacturing overhead expenses will vary depending on how many units are produced in a period.
- 12) Which of the following statements about using a plantwide overhead rate based on direct labor is correct? TBEXAM.COM
- A) Using a plantwide overhead rate based on direct labor-hours will ensure that direct labor costs are correctly traced to jobs.
 - B) Using a plantwide overhead rate based on direct labor costs will ensure that direct labor costs will be correctly traced to jobs.
 - C) It is often overly simplistic and incorrect to assume that direct labor-hours is a company's only manufacturing overhead cost driver.
 - D) The labor theory of value ensures that using a plantwide overhead rate based on direct labor will do a reasonably good job of assigning overhead costs to jobs.

Managerial Accounting Edition 18 by Garrison

13) Which of the following would usually be found on a job cost sheet under a normal cost system?

	Actual direct material cost	Actual manufacturing overhead cost
A)	Yes	Yes
B)	Yes	No
C)	No	Yes
D)	No	No

- A) Choice A
- B) Choice B
- C) Choice C
- D) Choice D

14) Which of the following statements is not correct concerning multiple overhead rate systems?

- A) A multiple overhead rate system is more complex than a system based on a single plantwide overhead rate.
- B) A multiple overhead rate system is usually more accurate than a system based on a single plantwide overhead rate.
- C) A company may choose to create a separate overhead rate for each of its production departments.
- D) In departments that are relatively labor-intensive, their overhead costs should be applied to jobs based on machine-hours rather than on direct labor-hours.

15) Johansen Corporation uses a predetermined overhead rate based on direct labor-hours to apply manufacturing overhead to jobs. The Corporation has provided the following estimated costs for the next year:

Direct materials	\$ 6,000
Direct labor	\$ 20,000
Rent on factory building	\$ 15,000
Sales salaries	\$ 25,000
Depreciation on factory equipment	\$ 8,000
Indirect labor	\$ 12,000
Production supervisor's salary	\$ 15,000

Jameson estimates that 20,000 direct labor-hours will be worked during the year. The predetermined overhead rate per hour will be:

- A) \$2.50 per direct labor-hour
- B) \$2.79 per direct labor-hour
- C) \$3.00 per direct labor-hour
- D) \$4.00 per direct labor-hour

Managerial Accounting Edition 18 by Garrison

- 16) The Silver Corporation uses a predetermined overhead rate to apply manufacturing overhead to jobs. The predetermined overhead rate is based on labor cost in Department A and on machine-hours in Department B. At the beginning of the year, the Corporation made the following estimates:

	Department A	Department B
Direct labor cost	\$ 60,000	\$ 40,000
Manufacturing overhead	\$ 90,000	\$ 45,000
Direct labor-hours	6,000	9,000
Machine-hours	2,000	15,000

What predetermined overhead rates would be used in Department A and Department B, respectively?

- A) 67% and \$3.00
 - B) 150% and \$5.00
 - C) 150% and \$3.00
 - D) 67% and \$5.00
- 17) Purves Corporation is using a predetermined overhead rate that was based on estimated total fixed manufacturing overhead of \$121,000 and 10,000 direct labor-hours for the period. The company incurred actual total fixed manufacturing overhead of \$113,000 and 10,900 total direct labor-hours during the period. The predetermined overhead rate is closest to:
- A) \$10.37
 - B) \$12.10
 - C) \$11.10
 - D) \$11.30

Managerial Accounting Edition 18 by Garrison

- 18) Reamer Corporation uses a predetermined overhead rate based on machine-hours to apply manufacturing overhead to jobs. The Corporation has provided the following estimated costs for next year:

Direct materials	\$ 1,000
Direct labor	\$ 3,000
Sales commissions	\$ 4,000
Salary of production supervisor	\$ 2,000
Indirect materials	\$ 400
Advertising expense	\$ 800
Rent on factory equipment	\$ 1,000

Reamer estimates that 500 direct labor-hours and 1,000 machine-hours will be worked during the year. The predetermined overhead rate per hour will be:

- A) \$6.80 per machine-hour
- B) \$6.00 per machine-hour
- C) \$3.00 per machine-hour
- D) \$3.40 per machine-hour

- 19) Baj Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company considers all of its manufacturing overhead costs to be fixed and it has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year	\$ 534,000
Estimated activity level from the beginning of the year	30,000 machine-hours
Actual total fixed manufacturing overhead	\$ 487,000
Actual activity level	27,400 machine-hours

The predetermined overhead rate per machine-hour would be closest to:

- A) \$17.80
- B) \$19.49
- C) \$16.23
- D) \$17.77

Managerial Accounting Edition 18 by Garrison

- 20) Giannitti Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the upcoming year appear below:

Estimated machine-hours	72,700
Estimated variable manufacturing overhead	\$ 3.10 per machine-hour
Estimated total fixed manufacturing overhead	\$ 838,800

The predetermined overhead rate for the recently completed year was closest to:

- A) \$9.30 per machine-hour
- B) \$14.64 per machine-hour
- C) \$8.67 per machine-hour
- D) \$6.83 per machine-hour

- 21) Giannitti Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the upcoming year appear below:

Estimated machine-hours	36,000
Estimated variable manufacturing overhead	\$ 3.01 per machine-hour
Estimated total fixed manufacturing overhead	\$ 1,058,040

The predetermined overhead rate for the recently completed year was closest to:

- A) \$29.39 per machine-hour
- B) \$32.40 per machine-hour
- C) \$32.81 per machine-hour
- D) \$3.01 per machine-hour

- 22) Gilchrist Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. At the beginning of the most recently completed year, the Corporation estimated the machine-hours for the upcoming year at 28,100 machine-hours. The estimated variable manufacturing overhead was \$4.47 per machine-hour and the estimated total fixed manufacturing overhead was \$789,048. The predetermined overhead rate for the recently completed year was closest to:

- A) \$32.55 per machine-hour
- B) \$31.55 per machine-hour
- C) \$4.47 per machine-hour
- D) \$28.08 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 23) Gilchrist Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. At the beginning of the most recently completed year, the Corporation estimated the machine-hours for the upcoming year at 79,000 machine-hours. The estimated variable manufacturing overhead was \$7.38 per machine-hour and the estimated total fixed manufacturing overhead was \$2,347,090. The predetermined overhead rate for the recently completed year was closest to:
- A) \$37.09 per machine-hour
 - B) \$36.07 per machine-hour
 - C) \$7.38 per machine-hour
 - D) \$29.71 per machine-hour
- 24) Dearden Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$144,000, variable manufacturing overhead of \$2.00 per machine-hour, and 60,000 machine-hours. The predetermined overhead rate is closest to:
- A) \$2.40 per machine-hour
 - B) \$6.40 per machine-hour
 - C) \$4.40 per machine-hour
 - D) \$2.00 per machine-hour
- TBEXAM.COM
- 25) Longobardi Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the Corporation estimated the labor-hours for the upcoming year at 30,700 labor-hours. The estimated variable manufacturing overhead was \$5.09 per labor-hour and the estimated total fixed manufacturing overhead was \$724,827. The actual labor-hours for the year turned out to be 27,300 labor-hours. The predetermined overhead rate for the recently completed year was closest to:
- A) \$28.70 per labor-hour
 - B) \$23.61 per labor-hour
 - C) \$5.09 per labor-hour
 - D) \$32.27 per labor-hour

Managerial Accounting Edition 18 by Garrison

26) Longobardi Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the Corporation estimated the labor-hours for the upcoming year at 46,000 labor-hours. The estimated variable manufacturing overhead was \$6.25 per labor-hour and the estimated total fixed manufacturing overhead was \$1,026,260. The actual labor-hours for the year turned out to be 41,200 labor-hours. The predetermined overhead rate for the recently completed year was closest to:

- A) \$28.56 per labor-hour
- B) \$22.31 per labor-hour
- C) \$6.25 per labor-hour
- D) \$31.16 per labor-hour

27) Valvano Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$440,000, variable manufacturing overhead of \$2.20 per machine-hour, and 50,000 machine-hours. The estimated total manufacturing overhead is closest to:

- A) \$440,000
- B) \$110,000
- C) \$440,002
- D) \$550,000

TBEXAM.COM

28) Brothern Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the most recently completed year appear below:

Estimates made at the beginning of the year:

Estimated machine-hours	41,000
Estimated variable manufacturing overhead	\$ 5.21 per machine-hour
Estimated total fixed manufacturing overhead	\$ 1,228,770
Actual machine-hours for the year	37,600

The predetermined overhead rate for the recently completed year was closest to:

- A) \$34.75 per machine-hour
- B) \$35.18 per machine-hour
- C) \$5.21 per machine-hour
- D) \$29.97 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 29) Brothern Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the most recently completed year appear below:

Estimates made at the beginning of the year:

Estimated machine-hours	39,000
Estimated variable manufacturing overhead	\$ 6.76 per machine-hour
Estimated total fixed manufacturing overhead	\$ 794,430
Actual machine-hours for the year	42,700

The predetermined overhead rate for the recently completed year was closest to:

- A) \$25.37 per machine-hour
- B) \$27.13 per machine-hour
- C) \$6.76 per machine-hour
- D) \$20.37 per machine-hour

- 30) Steele Corporation uses a predetermined overhead rate based on machine-hours to apply manufacturing overhead to jobs. Steele Corporation has provided the following estimated costs for next year:

Direct materials	TBEXAM.COM	\$ 20,000
Direct labor		\$ 60,000
Sales commissions		\$ 80,000
Salary of production supervisor		\$ 40,000
Indirect materials		\$ 8,000
Advertising expense		\$ 16,000
Rent on factory equipment		\$ 20,000

Steele estimates that 10,000 direct labor-hours and 16,000 machine-hours will be worked during the year. The predetermined overhead rate per hour will be:

- A) \$4.25
- B) \$8.00
- C) \$9.00
- D) \$10.25

Managerial Accounting Edition 18 by Garrison

- 31) Helland Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	30,000
Total fixed manufacturing overhead cost	\$ 189,000
Variable manufacturing overhead per direct labor-hour	\$ 2.50

The predetermined overhead rate is closest to:

- A) \$2.50 per direct labor-hour
- B) \$11.30 per direct labor-hour
- C) \$6.30 per direct labor-hour
- D) \$8.80 per direct labor-hour

- 32) Laflame Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	70,000
Total fixed manufacturing overhead cost	\$ 357,000
Variable manufacturing overhead per machine-hour	\$ 3.90

The estimated total manufacturing overhead is closest to:

- A) \$273,000
- B) \$630,000
- C) \$357,004
- D) \$357,000

TBEXAM.COM

- 33) Almaraz Corporation has two manufacturing departments--Forming and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Finishing	Total
Estimated total machine-hours (MHs)	7,000	3,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 40,600	\$ 8,100	\$ 48,700
Estimated variable manufacturing overhead cost per MH	\$ 1.30	\$ 2.80	

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. That predetermined manufacturing overhead rate is closest to:

- A) \$6.62
- B) \$4.87
- C) \$4.10
- D) \$7.10

Managerial Accounting Edition 18 by Garrison

- 34) Bernson Corporation is using a predetermined overhead rate that was based on estimated total fixed manufacturing overhead of \$492,000 and 30,000 machine-hours for the period. The company incurred actual total fixed manufacturing overhead of \$517,000 and 28,300 total machine-hours during the period. The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$464,120
- B) \$492,000
- C) \$487,703
- D) \$25,000

- 35) Beat Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	40,000
Total fixed manufacturing overhead cost	\$ 344,000
Variable manufacturing overhead per machine-hour	\$ 3.90

Recently, Job M759 was completed. It required 60 machine-hours. The amount of overhead applied to Job M759 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$750
- B) \$516
- C) \$984
- D) \$234

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

- 36) Mundorf Corporation has two manufacturing departments--Forming and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Assembly	Total
Estimated total machine-hours (MHs)	9,000	1,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 52,200	\$ 2,400	\$ 54,600
Estimated variable manufacturing overhead cost per MH	\$ 2.00	\$ 2.10	

During the most recent month, the company started and completed two jobs--Job B and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job H
Forming machine-hours	6,100	2,900
Assembly machine-hours	400	600

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job B is closest to:

- A) \$48,555
- B) \$35,490
- C) \$2,988
- D) \$45,567

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

- 37) Parido Corporation has two manufacturing departments--Casting and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Assembly	Total
Estimated total machine-hours (MHs)	8,000	2,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 44,000	\$ 4,200	\$ 48,200
Estimated variable manufacturing overhead cost per MH	\$ 1.90	\$ 3.00	

During the most recent month, the company started and completed two jobs--Job A and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job H
Casting machine-hours	5,400	2,600
Assembly machine-hours	800	1,200

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job H is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$8,328
- B) \$26,372
- C) \$18,316
- D) \$18,044

TBEXAM.COM

- 38) Juanita Corporation uses a job-order costing system and applies overhead on the basis of direct labor cost. At the end of October, Juanita had one job still in process. The job cost sheet for this job contained the following information:

Direct materials	\$ 480
Direct labor	\$ 150
Manufacturing overhead applied	\$ 600

An additional \$100 of labor was needed in November to complete this job. For this job, how much should Juanita have transferred to finished goods inventory in November when it was completed?

- A) \$1,330
- B) \$500
- C) \$1,230
- D) \$1,730

Managerial Accounting Edition 18 by Garrison

- 39) Carradine Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$105,000, variable manufacturing overhead of \$3.00 per machine-hour, and 70,000 machine-hours. The company recently completed Job P233 which required 60 machine-hours. The amount of overhead applied to Job P233 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$90
- B) \$270
- C) \$450
- D) \$180

- 40) Fusaro Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year \$ 684,000

Estimated activity level from the beginning of the year 40,000 machine-hours

Actual total fixed manufacturing overhead \$ 616,000

Actual activity level TBEXAM.COM 37,700 machine-hours

The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$644,670
- B) \$684,000
- C) \$68,000
- D) \$580,580

Managerial Accounting Edition 18 by Garrison

- 41) Koelsch Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 4,000	\$ 25,200	\$ 29,200
Estimated variable manufacturing overhead cost per MH	\$ 2.00	\$ 3.00	

During the most recent month, the company started and completed two jobs--Job F and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job K
Direct materials	\$ 12,300	\$ 8,400
Direct labor cost	\$ 18,200	\$ 6,800
Molding machine-hours	700	300
Customizing machine-hours	3,600	5,400

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job K is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$72,561
- B) \$79,817
- C) \$24,187
- D) \$48,374

Managerial Accounting Edition 18 by Garrison

- 42) Thach Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$665,000, variable manufacturing overhead of \$3.00 per machine-hour, and 70,000 machine-hours. Recently, Job T321 was completed with the following characteristics:

Number of units in the job	30
Total machine-hours	90
Direct materials	\$ 630
Direct labor cost	\$ 2,880

The unit product cost for Job T321 is closest to:

- A) \$117.00
- B) \$58.50
- C) \$154.50
- D) \$51.50

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

- 43) Tancredi Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 22,000	\$ 11,500	\$ 33,500
Estimated variable manufacturing overhead cost per MH	\$ 1.80	\$ 3.00	

During the most recent month, the company started and completed two jobs--Job E and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job E	Job J
Direct materials	\$ 12,800	\$ 7,000
Direct labor cost	\$ 17,600	\$ 7,700
Machining machine-hours	3,400	1,600
Customizing machine-hours	2,000	3,000

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. If both jobs are sold during the month, the company's cost of goods sold for the month would be closest to: TBEXAM.COM

Note: Round your intermediate calculations to 2 decimal places.

- A) \$102,600
- B) \$61,450
- C) \$41,150
- D) \$110,808

Managerial Accounting Edition 18 by Garrison

- 44) Session Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	70,000
Total fixed manufacturing overhead cost	\$ 511,000
Variable manufacturing overhead per direct labor-hour	\$ 2.10

Recently, Job K913 was completed with the following characteristics:

Total direct labor-hours	150
Direct materials	\$ 705
Direct labor cost	\$ 4,650

The total job cost for Job K913 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$6,060
- B) \$2,115
- C) \$6,765
- D) \$5,355

- 45) Pebbles Corporation has two manufacturing departments--Casting and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Finishing	Total
Estimated total machine-hours (MHs)	2,000	3,000	5,000
Estimated total fixed manufacturing overhead cost	\$ 9,800	\$ 6,300	\$ 16,100
Estimated variable manufacturing overhead cost per MH	\$ 2.00	\$ 2.40	

During the most recent month, the company started and completed two jobs--Job A and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job L
Direct materials	\$ 15,400	\$ 9,600
Direct labor cost	\$ 24,900	\$ 6,200
Casting machine-hours	1,400	600
Finishing machine-hours	1,200	1,800

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job L is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$9,600
- B) \$6,200
- C) \$28,904
- D) \$13,104

- 46) Stockmaster Corporation has two manufacturing departments--Forming and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Assembly	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 27,000	\$ 10,500	\$ 37,500
Estimated variable manufacturing overhead cost per MH	\$ 1.10	\$ 2.80	

During the most recent month, the company started and completed two jobs--Job C and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job H
Direct materials	\$ 11,200	\$ 7,500
Direct labor cost	\$ 21,000	\$ 7,800
Forming machine-hours	3,400	1,600
Assembly machine-hours	2,000	3,000

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 40% on manufacturing cost to establish selling prices. The calculated selling price for Job C is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$96,989
- B) \$88,172
- C) \$25,192
- D) \$62,980

Managerial Accounting Edition 18 by Garrison

- 47) Atteberry Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	6,000	4,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 30,000	\$ 11,200	\$ 41,200
Estimated variable manufacturing overhead cost per MH	\$ 2.00	\$ 2.40	

During the most recent month, the company started and completed two jobs--Job E and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job E	Job L
Direct materials	\$ 13,400	\$ 9,100
Direct labor cost	\$ 24,500	\$ 7,000
Machining machine-hours	4,100	1,900
Finishing machine-hours	1,600	2,400

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job E is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$24,500
- B) \$35,796
- C) \$13,400
- D) \$73,696

- 48) Coates Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$249,000, variable manufacturing overhead of \$3.80 per machine-hour, and 30,000 machine-hours. The company has provided the following data concerning Job X784 which was recently completed:

Number of units in the job	50
Total machine-hours	250
Direct materials	\$ 470
Direct labor cost	\$ 5,500

If the company marks up its unit product costs by 30% then the selling price for a unit in Job X784 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$253.87
- B) \$233.87
- C) \$53.97
- D) \$155.22

- 49) Sutter Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	10,000
Total fixed manufacturing overhead cost	\$ 35,000
Variable manufacturing overhead per machine-hour	\$ 2.20

Recently, Job T369 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	40
Direct materials	\$ 750
Direct labor cost	\$ 1,560

If the company marks up its unit product costs by 20% then the selling price for a unit in Job T369 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$324.56
- B) \$304.56
- C) \$277.20
- D) \$50.76

Managerial Accounting Edition 18 by Garrison

50) Doakes Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	60,000
Total fixed manufacturing overhead cost	\$ 378,000
Variable manufacturing overhead per direct labor-hour	\$ 2.20

Recently, Job M843 was completed with the following characteristics:

Number of units in the job	60
Total direct labor-hours	120
Direct materials	\$ 630
Direct labor cost	\$ 2,400

The unit product cost for Job M843 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$33.75
- B) \$67.50
- C) \$27.50
- D) \$50.50

51) Placker Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$155,000, variable manufacturing overhead of \$3.40 per machine-hour, and 50,000 machine-hours. Recently, Job A881 was completed with the following characteristics:

Total machine-hours	100
Direct materials	\$ 645
Direct labor cost	\$ 2,300

The total job cost for Job A881 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$3,595
- B) \$2,945
- C) \$2,950
- D) \$1,295

Managerial Accounting Edition 18 by Garrison

- 52) Tomey Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	18,000	14,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 99,000	\$ 70,400
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 3.70

During the current month the company started and finished Job T617. The following data were recorded for this job:

Job T617:	Forming	Finishing
Machine-hours	90	20
Direct labor-hours	30	60
Direct materials	\$ 940	\$ 350
Direct labor cost	\$ 960	\$ 1,920

The total job cost for Job T617 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$5,604
- B) \$2,584
- C) \$684
- D) \$3,020

Managerial Accounting Edition 18 by Garrison

- 53) Molash Corporation has two manufacturing departments--Machining and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Assembly	Total
Estimated total machine-hours (MHs)	2,000	3,000	5,000
Estimated total fixed manufacturing overhead cost	\$ 9,400	\$ 8,100	\$ 17,500
Estimated variable manufacturing overhead cost per MH	\$ 1.80	\$ 2.40	

During the most recent month, the company started and completed two jobs--Job B and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job L
Direct materials	\$ 14,400	\$ 7,100
Direct labor cost	\$ 23,500	\$ 6,700
Machining machine-hours	1,400	600
Assembly machine-hours	1,200	1,800

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job L is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$40,320
- B) \$41,933
- C) \$13,440
- D) \$26,880

Managerial Accounting Edition 18 by Garrison

54) Columbo Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	17,000	10,000
Direct labor-hours	1,000	9,000
Total fixed manufacturing overhead cost	\$ 110,500	\$ 78,300
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.30

During the current month the company started and finished Job A948. The following data were recorded for this job:

Job A948:	Forming	Finishing
Machine-hours	70	30
Direct labor-hours	10	50
Direct materials	\$ 650	\$ 330
Direct labor cost	\$ 380	\$ 1,900

If the company marks up its manufacturing costs by 40% then the selling price for Job A948 would be closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$6,197.80
- B) \$1,770.80
- C) \$4,427.00
- D) \$6,818.00

Managerial Accounting Edition 18 by Garrison

55) Lotz Corporation has two manufacturing departments--Casting and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Finishing	Total
Estimated total machine-hours (MHs)	2,000	8,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 10,200	\$ 19,200	\$ 29,400
Estimated variable manufacturing overhead cost per MH	\$ 1.20	\$ 2.20	

During the most recent month, the company started and completed two jobs--Job F and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job K
Direct materials	\$ 14,400	\$ 7,100
Direct labor cost	\$ 22,500	\$ 6,600
Casting machine-hours	1,400	600
Finishing machine-hours	3,200	4,800

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job F is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$30,220
- B) \$90,660
- C) \$60,440
- D) \$96,100

Managerial Accounting Edition 18 by Garrison

- 56) Ashe Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	1,000	4,000	5,000
Estimated total fixed manufacturing overhead cost	\$ 4,700	\$ 9,200	\$ 13,900
Estimated variable manufacturing overhead cost per MH	\$ 1.10	\$ 2.60	

During the most recent month, the company started and completed two jobs--Job B and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job K
Machining machine-hours	700	300
Customizing machine-hours	1,600	2,400

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. The manufacturing overhead applied to Job K is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$11,760
- B) \$1,740
- C) \$13,716
- D) \$13,500

TBEXAM.COM

80) Huang Aerospace Corporation manufactures aviation control panels in two departments, Fabrication and Assembly. In the Fabrication department, Huang uses a predetermined overhead rate of \$30 per machine-hour. In the Assembly department, Huang uses a predetermined overhead rate of \$12 per direct labor-hour. During the current year, Job number X2984 incurred the following number of hours in each department:

	Fabrication	Assembly
Machine-hours	40	12
Direct labor-hours	3	25

What is the total amount of manufacturing overhead that Huang should have applied to Job number X2984 during the current year?

- A) \$1,200
- B) \$1,500
- C) \$1,560
- D) \$1,734

Managerial Accounting Edition 18 by Garrison

- 81) Sargent Corporation applies overhead cost to jobs on the basis of 80% of direct labor cost. If Job 210 shows \$20,560 of manufacturing overhead cost applied, how much was the direct labor cost on the job?
- A) \$25,700
 - B) \$37,008
 - C) \$16,448
 - D) \$20,560
- 82) Sargent Corporation applies overhead cost to jobs on the basis of 80% of direct labor cost. If Job 210 shows \$10,000 of manufacturing overhead cost applied, how much was the direct labor cost on the job?
- A) \$12,500
 - B) \$11,000
 - C) \$8,000
 - D) \$10,000
- 83) Kreuzer Corporation is using a predetermined overhead rate of \$22.30 per machine-hour that was based on estimated total fixed manufacturing overhead of \$446,000 and 20,000 machine-hours for the period. The company incurred actual total fixed manufacturing overhead of \$409,000 and 18,200 total machine-hours during the period. The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:
- A) \$446,000
 - B) \$37,000
 - C) \$372,190
 - D) \$405,860

Managerial Accounting Edition 18 by Garrison

- 84) Kavin Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Predetermined overhead rate	\$ 23.60 per machine-hour
Estimated total fixed manufacturing overhead from the beginning of the year	\$ 708,000
Estimated activity level from the beginning of the year	30,000 machine-hours
Actual total fixed manufacturing overhead	\$ 752,000
Actual activity level	28,100 machine-hours

The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:

- A) \$663,160
- B) \$708,000
- C) \$44,000
- D) \$704,373

- 85) Job 910 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$ 2,414
Direct labor-hours	74 labor-hours
Direct labor wage rate	\$ 17 per labor-hour
Machine-hours	137 machine-hours

The Corporation applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$18 per machine-hour. The total cost that would be recorded on the job cost sheet for Job 910 would be:

- A) \$6,138
- B) \$3,462
- C) \$3,672
- D) \$6,978

Managerial Accounting Edition 18 by Garrison

86) Job 910 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$ 3,193
Direct labor-hours	21 labor-hours
Direct labor wage rate	\$ 12 per labor-hour
Machine-hours	166 machine-hours

The Corporation applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$15 per machine-hour. The total cost that would be recorded on the job cost sheet for Job 910 would be:

- A) \$3,220
- B) \$3,760
- C) \$5,935
- D) \$3,445

87) Grib Corporation uses a predetermined overhead rate based on direct labor cost to apply manufacturing overhead to jobs. The predetermined overhead rates for the year are 200% of direct labor cost for Department A and 50% of direct labor cost for Department B. Job 436, started and completed during the year, was charged with the following costs:

	Department A	Department B
Direct materials	\$ 50,000	\$ 10,000
Direct labor	?	\$ 60,000
Manufacturing overhead	\$ 80,000	?

The total manufacturing cost assigned to Job 436 was:

- A) \$360,000
- B) \$390,000
- C) \$270,000
- D) \$480,000

88) The following data have been recorded for recently completed Job 450 on its job cost sheet. Direct materials cost was \$2,118. A total of 40 direct labor-hours and 257 machine-hours were worked on the job. The direct labor wage rate is \$18 per labor-hour. The Corporation applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$22 per machine-hour. The total cost for the job on its job cost sheet would be:

- A) \$5,448
- B) \$5,867
- C) \$10,637
- D) \$8,492

Managerial Accounting Edition 18 by Garrison

- 89) The following data have been recorded for recently completed Job 450 on its job cost sheet. Direct materials cost was \$3,044. A total of 46 direct labor-hours and 104 machine-hours were worked on the job. The direct labor wage rate is \$15 per labor-hour. The Corporation applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$13 per machine-hour. The total cost for the job on its job cost sheet would be:
- A) \$4,332
 - B) \$3,734
 - C) \$3,072
 - D) \$5,086

- 90) Dejarnette Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	80,000
Total fixed manufacturing overhead cost	\$ 416,000
Variable manufacturing overhead per machine-hour	\$ 3.10

The estimated total manufacturing overhead is closest to:

- A) \$416,003
- B) \$248,000
- C) \$664,000
- D) \$416,000

TBEXAM.COM

- 91) Dejarnette Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	80,000
Total fixed manufacturing overhead cost	\$ 416,000
Variable manufacturing overhead per machine-hour	\$ 3.10

The predetermined overhead rate is closest to:

- A) \$8.30 per machine-hour
- B) \$11.40 per machine-hour
- C) \$5.20 per machine-hour
- D) \$3.10 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 92) Odonnel Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$36,000, variable manufacturing overhead of \$2.80 per direct labor-hour, and 10,000 direct labor-hours.

The estimated total manufacturing overhead is closest to:

- A) \$64,000
- B) \$36,000
- C) \$28,000
- D) \$36,003

- 93) Odonnel Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$36,000, variable manufacturing overhead of \$2.80 per direct labor-hour, and 10,000 direct labor-hours.

The predetermined overhead rate is closest to:

- A) \$2.80 per direct labor-hour
- B) \$6.40 per direct labor-hour
- C) \$3.60 per direct labor-hour
- D) \$9.20 per direct labor-hour

Managerial Accounting Edition 18 by Garrison

94) Morataya Corporation has two manufacturing departments--Machining and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Assembly	Total
Estimated total machine-hours (MHs)	7,000	3,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 39,200	\$ 6,600	\$ 45,800
Estimated variable manufacturing overhead cost per MH	\$ 1.90	\$ 2.10	

During the most recent month, the company started and completed two jobs--Job B and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job G
Direct materials	\$ 14,800	\$ 8,300
Direct labor cost	\$ 22,000	\$ 8,900
Machining machine-hours	4,800	2,200
Assembly machine-hours	1,200	1,800

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. That predetermined manufacturing overhead rate is closest to:

- A) \$4.00
- B) \$7.50
- C) \$4.58
- D) \$6.54

- 111) Dehner Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	40,000
Total fixed manufacturing overhead cost	\$ 96,000
Variable manufacturing overhead per direct labor-hour	\$ 3.00

Recently, Job P951 was completed with the following characteristics:

Number of units in the job	20
Total direct labor-hours	100
Direct materials	\$ 755
Direct labor cost	\$ 4,000

The total job cost for Job P951 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$4,540
- B) \$4,755
- C) \$1,295
- D) \$5,295

- 112) Dehner Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	105,000
Total fixed manufacturing overhead cost	\$ 399,000
Variable manufacturing overhead per direct labor-hour	\$ 2.00

Recently, Job P951 was completed with the following characteristics:

Number of units in the job	50
Total direct labor-hours	100
Direct materials	\$ 730
Direct labor cost	\$ 10,500

The unit product cost for Job P951 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$290.00
- B) \$236.20
- C) \$136.20
- D) \$118.10

Managerial Accounting Edition 18 by Garrison

- 113) Dehner Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	40,000
Total fixed manufacturing overhead cost	\$ 96,000
Variable manufacturing overhead per direct labor-hour	\$ 3.00

Recently, Job P951 was completed with the following characteristics:

Number of units in the job	20
Total direct labor-hours	100
Direct materials	\$ 755
Direct labor cost	\$ 4,000

The unit product cost for Job P951 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$237.75
- B) \$264.75
- C) \$64.75
- D) \$52.95

- 114) Branin Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$160,000, variable manufacturing overhead of \$3.40 per direct labor-hour, and 80,000 direct labor-hours. The company has provided the following data concerning Job A578 which was recently completed:

Total direct labor-hours	250
Direct materials	\$ 715
Direct labor cost	\$ 9,000

The estimated total manufacturing overhead is closest to:

- A) \$272,000
- B) \$160,000
- C) \$432,000
- D) \$160,003

Managerial Accounting Edition 18 by Garrison

- 115) Branin Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$160,000, variable manufacturing overhead of \$3.40 per direct labor-hour, and 80,000 direct labor-hours. The company has provided the following data concerning Job A578 which was recently completed:

Total direct labor-hours	250
Direct materials	\$ 715
Direct labor cost	\$ 9,000

The predetermined overhead rate is closest to:

- A) \$8.80 per direct labor-hour
- B) \$2.00 per direct labor-hour
- C) \$3.40 per direct labor-hour
- D) \$5.40 per direct labor-hour

- 116) Branin Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$160,000, variable manufacturing overhead of \$3.40 per direct labor-hour, and 80,000 direct labor-hours. The company has provided the following data concerning Job A578 which was recently completed: TBEXAM.COM

Total direct labor-hours	250
Direct materials	\$ 715
Direct labor cost	\$ 9,000

The amount of overhead applied to Job A578 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$500
- B) \$1,350
- C) \$2,200
- D) \$850

Managerial Accounting Edition 18 by Garrison

- 117) Branin Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$160,000, variable manufacturing overhead of \$3.40 per direct labor-hour, and 80,000 direct labor-hours. The company has provided the following data concerning Job A578 which was recently completed:

Total direct labor-hours	250
Direct materials	\$ 715
Direct labor cost	\$ 9,000

Managerial Accounting Edition 18 by Garrison

- 120) Opunui Corporation has two manufacturing departments--Molding and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Finishing	Total
Estimated total machine-hours (MHs)	3,250	1,750	5,000
Estimated total fixed manufacturing overhead cost	\$ 25,000	\$ 4,800	\$ 29,800
Estimated variable manufacturing overhead cost per MH	\$ 1.50	\$ 3.00	

During the most recent month, the company started and completed two jobs--Job A and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job M
Direct materials	\$ 16,500	\$ 9,800
Direct labor cost	\$ 23,200	\$ 10,200
Molding machine-hours	1,250	2,000
Finishing machine-hours	1,250	500

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job M is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$19,975
- B) \$10,200
- C) \$39,975
- D) \$9,800

Note: Round your intermediate calculations to 2 decimal places.

- A) \$300.00
- B) \$337.70
- C) \$381.00
- D) \$60.00

Managerial Accounting Edition 18 by Garrison

- 143) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,000
Total fixed manufacturing overhead cost	\$ 252,000
Variable manufacturing overhead per machine-hour	\$ 2.10

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 675
Direct labor cost	\$ 1,050

The amount of overhead applied to Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$315
- B) \$252
- C) \$378
- D) \$63

- 144) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,300
Total fixed manufacturing overhead cost	\$ 575,700
Variable manufacturing overhead per machine-hour	\$ 4

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 730
Direct labor cost	\$ 1,460

The total job cost for Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$2,150
- B) \$2,190
- C) \$1,420
- D) \$2,880

Managerial Accounting Edition 18 by Garrison

- 145) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,000
Total fixed manufacturing overhead cost	\$ 252,000
Variable manufacturing overhead per machine-hour	\$ 2.10

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 675
Direct labor cost	\$ 1,050

The total job cost for Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$1,365
- B) \$1,725
- C) \$990
- D) \$2,040

- 146) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	32,800
Total fixed manufacturing overhead cost	\$ 164,000
Variable manufacturing overhead per machine-hour	\$ 5

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 745
Direct labor cost	\$ 1,490

The unit product cost for Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$104.50
- B) \$84.50
- C) \$223.50
- D) \$253.50

Managerial Accounting Edition 18 by Garrison

- 147) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,000
Total fixed manufacturing overhead cost	\$ 252,000
Variable manufacturing overhead per machine-hour	\$ 2.10

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 675
Direct labor cost	\$ 1,050

The unit product cost for Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$99.00
- B) \$68.00
- C) \$172.50
- D) \$204.00

- 148) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,300
Total fixed manufacturing overhead cost	\$ 575,700
Variable manufacturing overhead per machine-hour	\$ 4.00

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 730
Direct labor cost	\$ 1,460

If the company marks up its unit product costs by 40% then the selling price for a unit in Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$115.20
- B) \$667.00
- C) \$403.20
- D) \$306.60

Managerial Accounting Edition 18 by Garrison

- 149) Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,000
Total fixed manufacturing overhead cost	\$ 252,000
Variable manufacturing overhead per machine-hour	\$ 2.10

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours	30
Direct materials	\$ 675
Direct labor cost	\$ 1,050

If the company marks up its unit product costs by 40% then the selling price for a unit in Job T687 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$81.60
- B) \$305.60
- C) \$285.60
- D) \$241.50

Managerial Accounting Edition 18 by Garrison

- 150) Ronson Corporation has two manufacturing departments--Casting and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 27,500	\$ 10,500	\$ 38,000
Estimated variable manufacturing overhead cost per MH	\$ 1.70	\$ 2.60	

During the most recent month, the company started and completed two jobs--Job C and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job G
Direct materials	\$ 10,600	\$ 6,800
Direct labor cost	\$ 23,700	\$ 7,900
Casting machine-hours	3,400	1,600
Customizing machine-hours	2,000	3,000

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job C is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$32,130
- B) \$11,900
- C) \$20,230
- D) \$20,520

Managerial Accounting Edition 18 by Garrison

- 151) Ronson Corporation has two manufacturing departments--Casting and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 27,500	\$ 10,500	\$ 38,000
Estimated variable manufacturing overhead cost per MH	\$ 1.70	\$ 2.60	

During the most recent month, the company started and completed two jobs--Job C and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job G
Direct materials	\$ 10,600	\$ 6,800
Direct labor cost	\$ 23,700	\$ 7,900
Casting machine-hours	3,400	1,600
Customizing machine-hours	2,000	3,000

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job G is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$42,070
- B) \$27,370
- C) \$6,800
- D) \$7,900

Managerial Accounting Edition 18 by Garrison

- 176) Halbur Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	6,000	4,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 33,600	\$ 10,000	\$ 43,600
Estimated variable manufacturing overhead cost per MH	\$ 1.80	\$ 2.80	

During the most recent month, the company started and completed two jobs--Job C and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job J
Direct materials	\$ 11,300	\$ 8,100
Direct labor cost	\$ 18,500	\$ 6,300
Machining machine-hours	4,100	1,900
Customizing machine-hours	1,600	2,400

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job J is closest to:

TBEXAM.COM

Note: Round your intermediate calculations to 2 decimal places.

- A) \$28,208
- B) \$18,748
- C) \$12,464
- D) \$15,744

Managerial Accounting Edition 18 by Garrison

- 177) Halbur Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	6,000	4,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 33,600	\$ 10,000	\$ 43,600
Estimated variable manufacturing overhead cost per MH	\$ 1.80	\$ 2.80	

During the most recent month, the company started and completed two jobs--Job C and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job J
Direct materials	\$ 11,300	\$ 8,100
Direct labor cost	\$ 18,500	\$ 6,300
Machining machine-hours	4,100	1,900
Customizing machine-hours	1,600	2,400

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job C is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$18,500
- B) \$67,192
- C) \$11,300
- D) \$37,392

Managerial Accounting Edition 18 by Garrison

- 178) Prather Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	50,000
Total fixed manufacturing overhead cost	\$ 285,000
Variable manufacturing overhead per direct labor-hour	\$ 3.80

Recently, Job P513 was completed with the following characteristics:

Number of units in the job	10
Total direct labor-hours	20
Direct materials	\$ 710
Direct labor cost	\$ 500

The estimated total manufacturing overhead is closest to:

- A) \$475,000
- B) \$285,000
- C) \$190,000
- D) \$285,004

- 179) Prather Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	TBEXAM.COM	50,000
Total fixed manufacturing overhead cost		\$ 285,000
Variable manufacturing overhead per direct labor-hour		\$ 3.80

Recently, Job P513 was completed with the following characteristics:

Number of units in the job	10
Total direct labor-hours	20
Direct materials	\$ 710
Direct labor cost	\$ 500

The predetermined overhead rate is closest to:

- A) \$13.30 per direct labor-hour
- B) \$3.80 per direct labor-hour
- C) \$9.50 per direct labor-hour
- D) \$5.70 per direct labor-hour

Managerial Accounting Edition 18 by Garrison

- 180) Prather Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	50,000
Total fixed manufacturing overhead cost	\$ 285,000
Variable manufacturing overhead per direct labor-hour	\$ 3.80

Recently, Job P513 was completed with the following characteristics:

Number of units in the job	10
Total direct labor-hours	20
Direct materials	\$ 710
Direct labor cost	\$ 500

The amount of overhead applied to Job P513 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$76
- B) \$190
- C) \$266
- D) \$114

- 181) Prather Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	50,000
Total fixed manufacturing overhead cost	\$ 285,000
Variable manufacturing overhead per direct labor-hour	\$ 3.80

Recently, Job P513 was completed with the following characteristics:

Number of units in the job	10
Total direct labor-hours	20
Direct materials	\$ 710
Direct labor cost	\$ 500

The total job cost for Job P513 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$690
- B) \$900
- C) \$1,400
- D) \$1,210

Managerial Accounting Edition 18 by Garrison

- 182) Kubes Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$90,000, variable manufacturing overhead of \$3.50 per direct labor-hour, and 30,000 direct labor-hours. The company has provided the following data concerning Job A477 which was recently completed:

Total direct labor-hours	100
Direct materials	\$ 520
Direct labor cost	\$ 2,800

The amount of overhead applied to Job A477 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$300
- B) \$350
- C) \$650
- D) \$1,000

- 183) Kubes Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$90,000, variable manufacturing overhead of \$3.50 per direct labor-hour, and 30,000 direct labor-hours. The company has provided the following data concerning Job A477 which was recently completed:

Total direct labor-hours	100
Direct materials	\$ 520
Direct labor cost	\$ 2,800

The total job cost for Job A477 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$3,450
- B) \$1,170
- C) \$3,970
- D) \$3,320

Managerial Accounting Edition 18 by Garrison

- 184) Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$ 129,200	\$ 77,600
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$ 730	\$ 380
Direct labor cost	\$ 900	\$ 1,200

The estimated total manufacturing overhead for the Assembly Department is closest to:

- A) \$77,600
- B) \$101,600
- C) \$56,674
- D) \$24,000

Managerial Accounting Edition 18 by Garrison

- 185) Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$ 129,200	\$ 77,600
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$ 730	\$ 380
Direct labor cost	\$ 900	\$ 1,200

The predetermined overhead rate for the Assembly Department is closest to:

- A) \$3.00 per direct labor-hour
- B) \$12.70 per direct labor-hour
- C) \$9.70 per direct labor-hour
- D) \$5.35 per direct labor-hour

Managerial Accounting Edition 18 by Garrison

- 186) Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$ 129,200	\$ 77,600
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$ 730	\$ 380
Direct labor cost	\$ 900	\$ 1,200

The amount of overhead applied in the Assembly Department to Job T288 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$508.00
- B) \$101,600.00
- C) \$388.00
- D) \$120.00

Managerial Accounting Edition 18 by Garrison

- 187) Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$ 129,200	\$ 77,600
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$ 730	\$ 380
Direct labor cost	\$ 900	\$ 1,200

The total amount of overhead applied in both departments to Job T288 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$508
- B) \$672
- C) \$1,688
- D) \$1,180

Managerial Accounting Edition 18 by Garrison

- 188) Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$ 129,200	\$ 77,600
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$ 730	\$ 380
Direct labor cost	\$ 900	\$ 1,200

The total job cost for Job T288 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$672
- B) \$2,088
- C) \$2,302
- D) \$4,390

Managerial Accounting Edition 18 by Garrison

- 189) Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$ 129,200	\$ 77,600
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$ 730	\$ 380
Direct labor cost	\$ 900	\$ 1,200

If the company marks up its manufacturing costs by 20% then the selling price for Job T288 would be closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$4,390.00
- B) \$878.00
- C) \$5,268.00
- D) \$5,795.00

Managerial Accounting Edition 18 by Garrison

- 190) Macnamara Corporation has two manufacturing departments--Casting and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Finishing	Total
Estimated total machine-hours (MHs)	1,000	4,000	5,000
Estimated total fixed manufacturing overhead cost	\$ 4,800	\$ 8,800	\$ 13,600
Estimated variable manufacturing overhead cost per MH	\$ 1.80	\$ 2.90	

During the most recent month, the company started and completed two jobs--Job F and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job M
Direct materials	\$ 11,500	\$ 9,000
Direct labor cost	\$ 18,400	\$ 7,400
Casting machine-hours	700	300
Finishing machine-hours	1,600	2,400

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. The manufacturing overhead applied to Job F is closest to: TBEXAM.COM

Note: Round your intermediate calculations to 2 decimal places.

- A) \$4,620
- B) \$12,780
- C) \$12,420
- D) \$8,160

Managerial Accounting Edition 18 by Garrison

- 191) Macnamara Corporation has two manufacturing departments--Casting and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Finishing	Total
Estimated total machine-hours (MHs)	1,000	4,000	5,000
Estimated total fixed manufacturing overhead cost	\$ 4,800	\$ 8,800	\$ 13,600
Estimated variable manufacturing overhead cost per MH	\$ 1.80	\$ 2.90	

During the most recent month, the company started and completed two jobs--Job F and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job M
Direct materials	\$ 11,500	\$ 9,000
Direct labor cost	\$ 18,400	\$ 7,400
Casting machine-hours	700	300
Finishing machine-hours	1,600	2,400

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job M is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$15,310
- B) \$47,767
- C) \$30,620
- D) \$45,930

Managerial Accounting Edition 18 by Garrison

- 192) Hickingbottom Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	17,000	15,000
Direct labor-hours	1,000	7,000
Total fixed manufacturing overhead cost	\$ 96,900	\$ 65,800
Variable manufacturing overhead per machine-hour	\$ 2.00	
Variable manufacturing overhead per direct labor-hour		\$ 3.60

During the current month the company started and finished Job M381. The following data were recorded for this job:

Job M381:	Forming	Finishing
Machine-hours	80	30
Direct labor-hours	30	40
Direct materials	\$ 840	\$ 350
Direct labor cost	\$ 750	\$ 1,000

The predetermined overhead rate for the Forming Department is closest to:

- A) \$5.70 per machine-hour
- B) \$7.70 per machine-hour
- C) \$2.00 per machine-hour
- D) \$18.70 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 193) Hickingbottom Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	17,000	15,000
Direct labor-hours	1,000	7,000
Total fixed manufacturing overhead cost	\$ 96,900	\$ 65,800
Variable manufacturing overhead per machine-hour	\$ 2.00	
Variable manufacturing overhead per direct labor-hour		\$ 3.60

During the current month the company started and finished Job M381. The following data were recorded for this job:

Job M381:	Forming	Finishing
Machine-hours	80	30
Direct labor-hours	30	40
Direct materials	\$ 840	\$ 350
Direct labor cost	\$ 750	\$ 1,000

The predetermined overhead rate for the Finishing Department is closest to:

- A) \$9.40 per direct labor-hour
- B) \$13.00 per direct labor-hour
- C) \$3.60 per direct labor-hour
- D) \$5.35 per direct labor-hour

Managerial Accounting Edition 18 by Garrison

- 194) Hickingbottom Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	17,000	15,000
Direct labor-hours	1,000	7,000
Total fixed manufacturing overhead cost	\$ 96,900	\$ 65,800
Variable manufacturing overhead per machine-hour	\$ 2.00	
Variable manufacturing overhead per direct labor-hour		\$ 3.60

During the current month the company started and finished Job M381. The following data were recorded for this job:

Job M381:	Forming	Finishing
Machine-hours	80	30
Direct labor-hours	30	40
Direct materials	\$ 840	\$ 350
Direct labor cost	\$ 750	\$ 1,000

The total job cost for Job M381 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$2,206
- B) \$616
- C) \$4,076
- D) \$1,870

Managerial Accounting Edition 18 by Garrison

- 195) Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 136,800	\$ 69,600
Variable manufacturing overhead per machine-hour	\$ 1.80	
Variable manufacturing overhead per direct labor-hour		\$ 3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$ 775	\$ 415
Direct labor cost	\$ 630	\$ 1,050

The estimated total manufacturing overhead for the Machining Department is closest to:

- A) \$136,800
- B) \$34,200
- C) \$171,000
- D) \$359,100

Managerial Accounting Edition 18 by Garrison

- 196) Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 136,800	\$ 69,600
Variable manufacturing overhead per machine-hour	\$ 1.80	
Variable manufacturing overhead per direct labor-hour		\$ 3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$ 775	\$ 415
Direct labor cost	\$ 630	\$ 1,050

The predetermined overhead rate for the Machining Department is closest to:

- A) \$7.20 per machine-hour
- B) \$9.00 per machine-hour
- C) \$21.38 per machine-hour
- D) \$1.80 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 197) Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 136,800	\$ 69,600
Variable manufacturing overhead per machine-hour	\$ 1.80	
Variable manufacturing overhead per direct labor-hour		\$ 3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$ 775	\$ 415
Direct labor cost	\$ 630	\$ 1,050

The amount of overhead applied in the Machining Department to Job K928 is closest to:

- A) \$783.00
- B) \$810.00
- C) \$162.00
- D) \$171,000.00

Managerial Accounting Edition 18 by Garrison

- 198) Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 136,800	\$ 69,600
Variable manufacturing overhead per machine-hour	\$ 1.80	
Variable manufacturing overhead per direct labor-hour		\$ 3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$ 775	\$ 415
Direct labor cost	\$ 630	\$ 1,050

The total amount of overhead applied in both departments to Job K928 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$1,405
- B) \$2,000
- C) \$810
- D) \$595

Managerial Accounting Edition 18 by Garrison

- 199) Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 136,800	\$ 69,600
Variable manufacturing overhead per machine-hour	\$ 1.80	
Variable manufacturing overhead per direct labor-hour		\$ 3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$ 775	\$ 415
Direct labor cost	\$ 630	\$ 1,050

The total job cost for Job K928 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$810
- B) \$4,275
- C) \$2,060
- D) \$2,215

Managerial Accounting Edition 18 by Garrison

- 200) Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$ 136,800	\$ 69,600
Variable manufacturing overhead per machine-hour	\$ 1.80	
Variable manufacturing overhead per direct labor-hour		\$ 3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$ 775	\$ 415
Direct labor cost	\$ 630	\$ 1,050

If the company marks up its manufacturing costs by 20% then the selling price for Job K928 would be closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$4,275.00
- B) \$5,643.00
- C) \$5,130.00
- D) \$855.00

Managerial Accounting Edition 18 by Garrison

- 201) Janicki Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 4,800	\$ 23,400	\$ 28,200
Estimated variable manufacturing overhead cost per MH	\$ 1.10	\$ 2.50	

During the most recent month, the company started and completed two jobs--Job A and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job J
Direct materials	\$ 12,000	\$ 7,700
Direct labor cost	\$ 20,700	\$ 6,400
Machining machine-hours	700	300
Customizing machine-hours	3,600	5,400

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job A is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$90,707
- B) \$27,487
- C) \$82,461
- D) \$54,974

Managerial Accounting Edition 18 by Garrison

202) Janicki Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 4,800	\$ 23,400	\$ 28,200
Estimated variable manufacturing overhead cost per MH	\$ 1.10	\$ 2.50	

During the most recent month, the company started and completed two jobs--Job A and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job J
Direct materials	\$ 12,000	\$ 7,700
Direct labor cost	\$ 20,700	\$ 6,400
Machining machine-hours	700	300
Customizing machine-hours	3,600	5,400

Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job J is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$71,983
- B) \$65,439
- C) \$43,626
- D) \$21,813

Managerial Accounting Edition 18 by Garrison

203) Janicki Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 4,800	\$ 23,400	\$ 28,200
Estimated variable manufacturing overhead cost per MH	\$ 1.10	\$ 2.50	

During the most recent month, the company started and completed two jobs--Job A and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job J
Direct materials	\$ 12,000	\$ 7,700
Direct labor cost	\$ 20,700	\$ 6,400
Machining machine-hours	700	300
Customizing machine-hours	3,600	5,400

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job A is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$27,595
- B) \$87,752
- C) \$82,785
- D) \$55,190

Managerial Accounting Edition 18 by Garrison

204) Janicki Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 4,800	\$ 23,400	\$ 28,200
Estimated variable manufacturing overhead cost per MH	\$ 1.10	\$ 2.50	

During the most recent month, the company started and completed two jobs--Job A and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job J
Direct materials	\$ 12,000	\$ 7,700
Direct labor cost	\$ 20,700	\$ 6,400
Machining machine-hours	700	300
Customizing machine-hours	3,600	5,400

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job J is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$65,115
- B) \$67,720
- C) \$21,705
- D) \$43,410

Managerial Accounting Edition 18 by Garrison

- 205) Comans Corporation has two production departments, Milling and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Customizing
Machine-hours	18,000	13,000
Direct labor-hours	4,000	7,000
Total fixed manufacturing overhead cost	\$ 113,400	\$ 64,400
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.90

During the current month the company started and finished Job A319. The following data were recorded for this job:

Job A319:	Milling	Customizing
Machine-hours	60	10
Direct labor-hours	20	60
Direct materials	\$ 655	\$ 305
Direct labor cost	\$ 400	\$ 1,200

The amount of overhead applied in the Milling Department to Job A319 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$142,200.00
- B) \$552.00
- C) \$96.00
- D) \$474.00

- 206) Comans Corporation has two production departments, Milling and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Customizing
Machine-hours	18,000	13,000
Direct labor-hours	4,000	7,000
Total fixed manufacturing overhead cost	\$ 113,400	\$ 64,400
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.90

During the current month the company started and finished Job A319. The following data were recorded for this job:

Job A319:	Milling	Customizing
Machine-hours	60	10
Direct labor-hours	20	60
Direct materials	\$ 655	\$ 305
Direct labor cost	\$ 400	\$ 1,200

The amount of overhead applied in the Customizing Department to Job A319 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$234.00
- B) \$786.00
- C) \$552.00
- D) \$91,700.00

Managerial Accounting Edition 18 by Garrison

- 207) Comans Corporation has two production departments, Milling and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Customizing
Machine-hours	16,000	11,000
Direct labor-hours	18,000	6,000
Total fixed manufacturing overhead cost	\$ 92,800	\$ 28,800
Variable manufacturing overhead per machine-hour	\$ 1.20	
Variable manufacturing overhead per direct labor-hour		\$ 5.00

During the current month the company started and finished Job A319. The following data were recorded for this job:

Job A319:	Milling	Customizing
Machine-hours	50	40
Direct labor-hours	60	30
Direct materials	\$ 430	\$ 180
Direct labor cost	\$ 800	\$ 540

If the company marks up its manufacturing costs by 10% then the selling price for Job A319 would be closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$3,139
- B) \$2,853
- C) \$2,594
- D) \$259

Managerial Accounting Edition 18 by Garrison

208) Comans Corporation has two production departments, Milling and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Customizing
Machine-hours	18,000	13,000
Direct labor-hours	4,000	7,000
Total fixed manufacturing overhead cost	\$ 113,400	\$ 64,400
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 3.90

During the current month the company started and finished Job A319. The following data were recorded for this job:

Job A319:	Milling	Customizing
Machine-hours	60	10
Direct labor-hours	20	60
Direct materials	\$ 655	\$ 305
Direct labor cost	\$ 400	\$ 1,200

If the company marks up its manufacturing costs by 20% then the selling price for Job A319 would be closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$5,042.00
- B) \$4,584.00
- C) \$3,820.00
- D) \$764.00

Managerial Accounting Edition 18 by Garrison

209) Sanderlin Corporation has two manufacturing departments--Machining and Finishing.

The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 26,500	\$ 13,500	\$ 40,000
Estimated variable manufacturing overhead cost per MH	\$ 2.00	\$ 3.00	

During the most recent month, the company started and completed two jobs--Job C and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job L
Direct materials	\$ 12,500	\$ 8,200
Direct labor cost	\$ 20,200	\$ 6,400
Machining machine-hours	3,400	1,600
Finishing machine-hours	2,000	3,000

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. The manufacturing overhead applied to Job L is closest to: TBEXAM.COM

Note: Round your intermediate calculations to 2 decimal places.

- A) \$29,900
- B) \$11,680
- C) \$28,780
- D) \$17,100

Managerial Accounting Edition 18 by Garrison

210) Sanderlin Corporation has two manufacturing departments--Machining and Finishing.

The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 26,500	\$ 13,500	\$ 40,000
Estimated variable manufacturing overhead cost per MH	\$ 2.00	\$ 3.00	

During the most recent month, the company started and completed two jobs--Job C and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job L
Direct materials	\$ 12,500	\$ 8,200
Direct labor cost	\$ 20,200	\$ 6,400
Machining machine-hours	3,400	1,600
Finishing machine-hours	2,000	3,000

Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 20% on manufacturing cost to establish selling prices. The calculated selling price for Job C is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$87,666
- B) \$68,920
- C) \$13,784
- D) \$82,704

Managerial Accounting Edition 18 by Garrison

- 211) Collini Corporation has two production departments, Machining and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours	17,000	15,000
Direct labor-hours	3,000	6,000
Total fixed manufacturing overhead cost	\$ 102,000	\$ 61,200
Variable manufacturing overhead per machine-hour	\$ 1.70	
Variable manufacturing overhead per direct labor-hour		\$ 4.10

During the current month the company started and finished Job T268. The following data were recorded for this job:

Job T268:	Machining	Customizing
Machine-hours	80	30
Direct labor-hours	30	50
Direct materials	\$ 720	\$ 380
Direct labor cost	\$ 900	\$ 1,500

The total amount of overhead applied in both departments to Job T268 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$616
- B) \$715
- C) \$2,046
- D) \$1,331

Managerial Accounting Edition 18 by Garrison

212) Collini Corporation has two production departments, Machining and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours	17,000	15,000
Direct labor-hours	3,000	6,000
Total fixed manufacturing overhead cost	\$ 102,000	\$ 61,200
Variable manufacturing overhead per machine-hour	\$ 1.70	
Variable manufacturing overhead per direct labor-hour		\$ 4.10

During the current month the company started and finished Job T268. The following data were recorded for this job:

Job T268:	Machining	Customizing
Machine-hours	80	30
Direct labor-hours	30	50
Direct materials	\$ 720	\$ 380
Direct labor cost	\$ 900	\$ 1,500

The total job cost for Job T268 is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$2,595
- B) \$616
- C) \$4,831
- D) \$2,236

Managerial Accounting Edition 18 by Garrison

- 213) Collini Corporation has two production departments, Machining and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours	17,000	15,000
Direct labor-hours	3,000	6,000
Total fixed manufacturing overhead cost	\$ 102,000	\$ 61,200

The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours	16,000	11,000
Direct labor-hours	2,000	6,000
Total fixed manufacturing overhead cost	\$ 104,000	\$ 56,400
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 3.30

During the current month the company started and finished Job T272. The following data were recorded for this job:

Job T272:	Machining	Customizing
Machine-hours	60	30
Direct labor-hours	10	60

The estimated total manufacturing overhead for the Machining Department is closest to:

- A) \$137,600
- B) \$104,000
- C) \$33,600
- D) \$310,933

Managerial Accounting Edition 18 by Garrison

- 222) Eisentrout Corporation has two production departments, Machining and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours	16,000	11,000
Direct labor-hours	2,000	6,000
Total fixed manufacturing overhead cost	\$ 104,000	\$ 56,400
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 3.30

During the current month the company started and finished Job T272. The following data were recorded for this job:

Job T272:	Machining	Customizing
Machine-hours	60	30
Direct labor-hours	10	60

The estimated total manufacturing overhead for the Customizing Department is closest to:

- A) \$40,950
- B) \$19,800
- C) \$56,400
- D) \$76,200

Managerial Accounting Edition 18 by Garrison

- 223) Eisentrout Corporation has two production departments, Machining and Customizing. 246) Garza Corporation has two production departments, Casting and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Customizing
Machine-hours	20,000	13,000
Direct labor-hours	1,000	7,000
Total fixed manufacturing overhead cost	\$ 152,000	\$ 68,600
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 4.30

The predetermined overhead rate for the Casting Department is closest to:

- A) \$9.70 per machine-hour
- B) \$7.60 per machine-hour
- C) \$2.10 per machine-hour
- D) \$27.71 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 254) Kapanga Manufacturing Corporation uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. The company started the month of October with a zero balance in its work in process and finished goods inventory accounts. During October, Kapanga worked on three jobs and incurred the following direct costs on those jobs:

	Job B18	Job B19	Job C11
Direct materials	\$ 12,000	\$ 25,000	\$ 18,000
Direct labor	\$ 8,000	\$ 10,000	\$ 5,000

Kapanga applies manufacturing overhead at a rate of 150% of direct labor cost. During October, Kapanga completed Jobs B18 and B19 and sold Job B19. Job C11 was incomplete at the end of the month.

What is Kapanga's work in process inventory balance at the end of October?

- A) \$23,000
- B) \$30,500
- C) \$32,000
- D) \$43,000

- 255) Kapanga Manufacturing Corporation uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. The company started the month of October with a zero balance in its work in process and finished goods inventory accounts. During October, Kapanga worked on three jobs and incurred the following direct costs on those jobs:

	Job B18	Job B19	Job C11
Direct materials	\$ 12,000	\$ 25,000	\$ 18,000
Direct labor	\$ 8,000	\$ 10,000	\$ 5,000

Kapanga applies manufacturing overhead at a rate of 150% of direct labor cost. During October, Kapanga completed Jobs B18 and B19 and sold Job B19. Job C11 was incomplete at the end of the month.

What is Kapanga's cost of goods sold for October?

- A) \$60,000
- B) \$40,000
- C) \$50,000
- D) \$35,000

Managerial Accounting Edition 18 by Garrison

- 256) Kapanga Manufacturing Corporation uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. The company started the month of October with a zero balance in its work in process and finished goods inventory accounts. During October, Kapanga worked on three jobs and incurred the following direct costs on those jobs:

	Job B18	Job B19	Job C11
Direct materials	\$ 12,000	\$ 25,000	\$ 18,000

238	\$ 800	\$ 1,500	\$ 2,250

Overhead is charged to production at 80% of direct materials cost. Jobs 235, 237, and 238 were completed during June and transferred to finished goods. Jobs 235 and 238 have been delivered to customers. Actual manufacturing overhead was equal to manufacturing overhead applied. There were no Finished Goods inventories at the beginning of June.

Lee's Finished Goods inventory balance on June 30 was:

- A) \$5,350
- B) \$3,950
- C) \$6,110
- D) \$4,910

261) Toan Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In September the company completed job S80M that consisted of 15,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for Job S80M shows the following costs:

Beginning balance	\$ 186,700
Direct materials	\$ 590,500
Direct labor cost	\$ 518,700
Manufacturing overhead cost applied	\$ 629,100

During the month, 15,000 completed units from job S80M were sold.

The cost of goods sold for September is closest to:

- A) \$1,925,000
- B) \$825,000
- C) \$825,120
- D) \$934,300

Managerial Accounting Edition 18 by Garrison

- 262) Toan Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In September the company completed job S80M that consisted of 23,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for Job S80M shows the following costs:

Beginning balance	\$ 66,700
Direct materials	\$ 494,500
Direct labor cost	\$ 158,700
Manufacturing overhead cost applied	\$ 269,100

During the month, 3,000 completed units from job S80M were sold.

The cost of goods sold for September is closest to:

- A) \$989,000
- B) \$129,000
- C) \$129,120
- D) \$922,300

- 263) Toan Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In September the company completed job S80M that consisted of 23,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for Job S80M shows the following costs:

Beginning balance	\$ 66,700
Direct materials	\$ 494,500
Direct labor cost	\$ 158,700
Manufacturing overhead cost applied	\$ 269,100

During the month, 3,000 completed units from job S80M were sold.

The finished goods inventory at the end of September is closest to:

- A) \$989,000
- B) \$129,000
- C) \$802,000
- D) \$860,000

ESSAY. Write your answer in the space provided or on a separate sheet of paper.

- 272) Linnear Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	30,000
Total fixed manufacturing overhead cost	\$144,000
Variable manufacturing overhead per machine-hour	\$ 4.00

Required: Calculate the estimated total manufacturing overhead for the year.

- 273) Dallman Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 70,000 machine-hours, total fixed manufacturing overhead cost of \$287,000, and a variable manufacturing overhead rate of \$3.50 per machine-hour.

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.

- 274) Henkes Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the company estimated the labor-hours for the upcoming year at 64,000 labor-hours. The estimated variable manufacturing overhead was \$8.30 per labor-hour and the estimated total fixed manufacturing overhead was \$1,043,200. The actual labor-hours for the year turned out to be 67,200 labor-hours.

Required: Compute the company's predetermined overhead rate for the recently completed year.

Note: Round your answer to 2 decimal places.

Managerial Accounting Edition 18 by Garrison

- 275) Henkes Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the company estimated the labor-hours for the upcoming year at 66,000 labor-hours. The estimated variable manufacturing overhead was \$8.41 per labor-hour and the estimated total fixed manufacturing overhead was \$1,533,180. The actual labor-hours for the year turned out to be 68,400 labor-hours.

Required: Compute the company's predetermined overhead rate for the recently completed year.

- 276) Crowson Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	47,000
Total fixed manufacturing overhead cost	\$ 401,000
Variable manufacturing overhead per machine-hour	\$ 4.40

Required: Calculate the predetermined overhead rate for the year.

Note: Round your answer to 2 decimal places.

- 277) Crowson Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	50,000
Total fixed manufacturing overhead cost	\$390,000
Variable manufacturing overhead per machine-hour	\$ 3.60

Required: Calculate the predetermined overhead rate for the year.

Managerial Accounting Edition 18 by Garrison

278) Cannizzaro Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 40,000 machine-hours, total fixed manufacturing overhead cost of \$248,000, and a variable manufacturing overhead rate of \$3.80 per machine-hour.

Required: Calculate the predetermined overhead rate for the year.

279) Quiet Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 40,000 machine-hours, total fixed manufacturing overhead cost of \$152,000, and a variable manufacturing overhead rate of \$3.10 per machine-hour.

Required: Calculate the estimated total manufacturing overhead for the year.

TBEXAM.COM

280) Mccaughan Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. Data for the most recently completed year appear below:

Estimates made at the beginning of the year:

Estimated labor-hours	37,000
Estimated variable manufacturing overhead	\$ 4.43 per labor-hour
Estimated total fixed manufacturing overhead	\$ 705,220
Actual labor-hours for the year	32,100

Required: Compute the company's predetermined overhead rate for the recently completed year.

Managerial Accounting Edition 18 by Garrison

281) Moscone Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the company estimated the labor-hours for the upcoming year at 78,000 labor-hours. The estimated variable manufacturing overhead was \$9.99 per labor-hour and the estimated total fixed manufacturing overhead was \$985,920.

Required: Compute the company's predetermined overhead rate.

282) Lightner Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the upcoming year appear below:

Estimated machine-hours	50,000
Estimated variable manufacturing overhead	\$ 8.82 per machine-hour
Estimated total fixed manufacturing overhead	\$ 1,077,000

Required: Compute the company's predetermined overhead rate.

TBEXAM.COM

283) Florek Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	10,000
Total fixed manufacturing overhead cost	\$31,000
Variable manufacturing overhead per direct labor-hour	\$ 2.50

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.

Managerial Accounting Edition 18 by Garrison

284) Meenach Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 51,000 direct labor-hours, total fixed manufacturing overhead cost of \$76,500, and a variable manufacturing overhead rate of \$3.80 per direct labor-hour. Recently Job X387 was completed and required 120 direct labor-hours.

Required: Calculate the amount of overhead applied to Job X387.

Note: Do not round intermediate calculations.

285) Meenach Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 80,000 direct labor-hours, total fixed manufacturing overhead cost of \$160,000, and a variable manufacturing overhead rate of \$2.30 per direct labor-hour. Recently Job X387 was completed and required 120 direct labor-hours.

Required: Calculate the amount of overhead applied to Job X387.

Note: Do not round intermediate calculations.

286) Weakley Corporation uses a predetermined overhead rate that was based on estimated total fixed manufacturing overhead of \$358,000 and 20,000 machine-hours for the period. The company incurred actual total fixed manufacturing overhead of \$382,000 and 18,300 total machine-hours during the period.

Required: Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

Managerial Accounting Edition 18 by Garrison

287) Fillmore Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 62,000 direct labor-hours, total fixed manufacturing overhead cost of \$96,000, and a variable manufacturing overhead rate of \$3.60 per direct labor-hour. Recently Job X809 was completed and required 100 direct labor-hours.

Required:

- Calculate the estimated total manufacturing overhead for the year. Note: Do not round intermediate calculations.
- Calculate the predetermined overhead rate for the year. Note: Do not round intermediate calculations.
- Calculate the amount of overhead applied to Job X809. Note: Do not round intermediate calculations.

288) Fillmore Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 60,000 direct labor-hours, total fixed manufacturing overhead cost of \$96,000, and a variable manufacturing overhead rate of \$3.30 per direct labor-hour. Recently Job X809 was completed and required 100 direct labor-hours.

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job X809.

Managerial Accounting Edition 18 by Garrison

- 289) Thrall Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	10,000
Total fixed manufacturing overhead cost	\$50,000
Variable manufacturing overhead per machine-hour	\$ 3.90

Recently Job K125 was completed and required 160 machine-hours.

Required: Calculate the amount of overhead applied to Job K125.

- 290) Verry Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	60,000
Total fixed manufacturing overhead cost	\$342,000
Variable manufacturing overhead per direct labor-hour	\$ 2.40

Recently Job X711 was completed and required 90 direct labor-hours.

Required: TBEXAM.COM

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job X711.

Managerial Accounting Edition 18 by Garrison

291) Trevigne Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year	\$ 114,000
Estimated activity level from the beginning of the year	10,000 machine-hours
Actual total fixed manufacturing overhead	\$ 104,000
Actual activity level	9,400 machine-hours

Required: Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

- 292) Luarca Corporation has two manufacturing departments--Casting and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Customizing	Total
Estimated total machine-hours (MHs)	2,000	3,000	5,000
Estimated total fixed manufacturing overhead cost	\$11,600	\$7,200	\$18,800
Estimated variable manufacturing overhead cost per MH	\$ 1.90	\$ 2.80	

During the most recent month, the company started and completed two jobs--Job F and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job L
Direct materials	\$10,600	\$6,600
Direct labor cost	\$24,400	\$8,600
Casting machine-hours	1,400	600
Customizing machine-hours	1,200	1,800

Required: Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling prices for Job F and Job L.

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

293) Lamberson Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	50,000
Total fixed manufacturing overhead cost	\$460,000
Variable manufacturing overhead per machine-hour	\$ 3.10

Recently Job P647 was completed with the following characteristics:

Number of units in the job	50
Total machine-hours	150
Direct materials	\$ 740
Direct labor cost	\$6,000

Required:

- Calculate the amount of overhead applied to Job P647.
- Calculate the total job cost for Job P647.
- Calculate the unit product cost for Job P647.

294) Mcewan Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 35,000 direct labor-hours, total fixed manufacturing overhead cost of \$273,000, and a variable manufacturing overhead rate of \$3.00 per direct labor-hour. Job X941, which was for 50 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total direct labor-hours	250
Direct materials	\$ 500
Direct labor cost	\$6,900

Required: Calculate the selling price for Job X941 if the company marks up its unit product costs by 20%.

Note: Round intermediate calculations and final answer to 2 decimal places.

Managerial Accounting Edition 18 by Garrison

- 295) Mcewan Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 20,000 direct labor-hours, total fixed manufacturing overhead cost of \$182,000, and a variable manufacturing overhead rate of \$2.50 per direct labor-hour. Job X941, which was for 50 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:
- | | |
|---------------------------------|----------|
| Total direct labor-hours | 250 |
| Direct materials | \$ 740 |
| Direct labor cost | \$ 6,500 |
- Required:** Calculate the selling price for Job X941 if the company marks up its unit product costs by 20%.
- Note:** Round intermediate calculations and final answer to 2 decimal places.

- 296) Teasley Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 70,000 machine-hours, total fixed manufacturing overhead cost of \$630,000, and a variable manufacturing overhead rate of \$3.40 per machine-hour. Job X159 was recently completed. The job cost sheet for the job contained the following data:
- | | |
|----------------------------|---------|
| Total machine-hours | 200 |
| Direct materials | \$ 670 |
| Direct labor cost | \$7,800 |
- Required:** Calculate the total job cost for Job X159.

Managerial Accounting Edition 18 by Garrison

297) Alsobrooks Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	47,000
Total fixed manufacturing overhead cost	\$ 164,500
Variable manufacturing overhead per machine-hour	\$ 4.00

Recently Job M242 was completed with the following characteristics:

Number of units in the job	20
Total machine-hours	70
Direct materials	\$ 725
Direct labor cost	\$ 1,700

Required:

- Calculate the total job cost for Job M242. Note: Do not round intermediate calculations.
- Calculate the unit product cost for Job M242. Note: Do not round intermediate calculations.

298) Alsobrooks Corporation uses a ~~job-order costing~~ **Periodic costing** system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	40,000
Total fixed manufacturing overhead cost	\$156,000
Variable manufacturing overhead per machine-hour	\$ 2.20

Recently Job M242 was completed with the following characteristics:

Number of units in the job	20
Total machine-hours	60
Direct materials	\$ 725
Direct labor cost	\$1,680

Required:

- Calculate the total job cost for Job M242.
- Calculate the unit product cost for Job M242.

Managerial Accounting Edition 18 by Garrison

299) Ryans Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	11,000
Total fixed manufacturing overhead cost	\$ 76,000
Variable manufacturing overhead per machine-hour	\$ 3.70

Recently Job P512 was completed with the following characteristics:

Number of units in the job	25
Total machine-hours	70
Direct materials	\$ 730
Direct labor cost	\$ 1,700

Required:

- Calculate the predetermined overhead rate for the year. Note: Do not round intermediate calculations.
- Calculate the amount of overhead applied to Job P512. Note: Do not round intermediate calculations.
- Calculate the total job cost for Job P512. Note: Do not round intermediate calculations.
- Calculate the unit product cost for Job P512. Note: Do not round intermediate calculations.

300) Ryans Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	10,000
Total fixed manufacturing overhead cost	\$71,000
Variable manufacturing overhead per machine-hour	\$ 2.50

Recently Job P512 was completed with the following characteristics:

Number of units in the job	30
Total machine-hours	60
Direct materials	\$ 870
Direct labor cost	\$2,400

Required:

- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job P512.
- Calculate the total job cost for Job P512.
- Calculate the unit product cost for Job P512.

TBEXAM.COM

301) Lezo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 40,000 machine-hours, total fixed manufacturing overhead cost of \$136,000, and a variable manufacturing overhead rate of \$2.90 per machine-hour. Job A290, which was for 60 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours	300
Direct materials	\$ 585
Direct labor cost	\$7,200

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job A290.
- Calculate the total job cost for Job A290.

Managerial Accounting Edition 18 by Garrison

- 302) Whitlatch Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	60,000
Total fixed manufacturing overhead cost	\$342,000
Variable manufacturing overhead per machine-hour	\$ 2.70

Recently Job M238 was completed with the following characteristics:

Number of units in the job	70
Total machine-hours	140
Direct materials	\$ 945
Direct labor cost	\$2,800

Required: Calculate the total job cost for Job M238.

- 303) Obermeyer Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 10,000 direct labor-hours, total fixed manufacturing overhead cost of \$96,000, and a variable manufacturing overhead rate of \$3.60 per direct labor-hour. Job A735, which was for 40 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total direct labor-hours	200
Direct materials	\$ 540
Direct labor cost	\$6,400

Required:

- Calculate the amount of overhead applied to Job A735.
- Calculate the total job cost for Job A735.
- Calculate the unit product cost for Job A735.

Managerial Accounting Edition 18 by Garrison

- 304) Olmscheid Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$ 25,000	\$ 20,000	\$ 45,000
Estimated variable manufacturing overhead cost per machine-hour	\$ 1.80	\$ 2.70	

During the period, the company started and completed two jobs--Job F and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job K
Direct materials	\$ 12,700	\$ 6,400
Direct labor cost	\$ 19,100	\$ 7,900
Forming machine-hours	3,900	2,150
Customizing machine-hours	2,500	3,550

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate. Note: Round your answer to 2 decimal places.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job F. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job K. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job F. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job K. Note: Round your answer to 2 decimal places.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 30% on manufacturing cost to establish selling prices. Calculate the selling price for Job F. Note: Round your answer to 2 decimal places.

Managerial Accounting Edition 18 by Garrison

- g. Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 30% on manufacturing cost to establish selling prices. Calculate the selling price for Job K. Note: Do not round intermediate calculations.
- h. Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. If both jobs were sold during the month, what was the company's cost of goods sold for the month? Note: Do not round intermediate calculations.

- 317) Kluth Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	7,000	2,400	9,400
Estimated total fixed manufacturing overhead cost	\$18,200	\$9,600	\$27,800
Estimated variable manufacturing overhead cost per MH	\$1.50	\$3.00	

During the most recent month, the company started and completed two jobs--Job C and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job M
Direct materials	\$ 15,300	\$ 9,000
Direct labor cost	\$ 22,100	\$ 9,100
Molding machine-hours	2,500	4,500
Customizing machine-hours	1,400	1,000

Required: Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 20% on manufacturing cost to establish selling prices. Calculate the selling prices for Job C and for Job M.

Note: Do not round intermediate calculations.

Managerial Accounting Edition 18 by Garrison

- 318) Kluth Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	3,000	2,000	5,000
Estimated total fixed manufacturing overhead cost	\$15,900	\$4,200	\$20,100
Estimated variable manufacturing overhead cost per MH	\$1.20	\$2.40	

During the most recent month, the company started and completed two jobs--Job C and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job M
Direct materials	\$ 15,600	\$ 8,600
Direct labor cost	\$ 25,100	\$ 8,300
Molding machine-hours	2,000	1,000
Customizing machine-hours	800	1,200

Required: Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 20% on manufacturing cost to establish selling prices. Calculate the selling prices for Job C and for Job M.

Note: Do not round intermediate calculations.

Managerial Accounting Edition 18 by Garrison

- 319) Amason Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	16,000	11,000
Direct labor-hours	2,000	6,000
Total fixed manufacturing overhead cost	\$102,400	\$66,000
Variable manufacturing overhead per machine-hour	\$ 1.90	
Variable manufacturing overhead per direct labor-hour		\$ 3.80

During the current month the company started and finished Job A950. The following data were recorded for this job:

Job A950:	Forming	Assembly
Machine-hours	50	20
Direct labor-hours	20	40
Direct materials	\$ 665	\$ 415
Direct labor cost	\$ 520	\$1,040

Required: Calculate the selling price for Job A950 if the company marks up its unit product costs by 30% to determine selling prices.

Managerial Accounting Edition 18 by Garrison

- 320) Dancel Corporation has two production departments, Milling and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Finishing
Machine-hours	17,000	14,000
Direct labor-hours	1,000	6,000
Total fixed manufacturing overhead cost	\$91,800	\$64,200
Variable manufacturing overhead per machine-hour	\$ 2.00	
Variable manufacturing overhead per direct labor-hour		\$ 3.40

During the current month the company started and finished Job M565. The following data were recorded for this job:

Job M565:	Milling	Finishing
Machine-hours	70	20
Direct labor-hours	10	40
Direct materials	\$ 750	\$ 360
Direct labor cost	\$ 340	\$1,360

Required:

- Calculate the total amount of overhead applied to Job M565 in both departments.
- Calculate the total job cost for Job M565.
- Calculate the selling price for Job M565 if the company marks up its unit product costs by 20% to determine selling prices.

Managerial Accounting Edition 18 by Garrison

- 321) Pangle Corporation has two production departments, Forming and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Customizing
Machine-hours	16,000	12,000
Direct labor-hours	4,000	9,000
Total fixed manufacturing overhead cost	\$91,200	\$99,000
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 3.10

During the current month the company started and finished Job M109. The following data were recorded for this job:

Job M109:	Forming	Customizing
Machine-hours	50	30
Direct labor-hours	20	50
Direct materials	\$ 915	\$355
Direct labor cost	\$ 620	\$1,550

Required: Calculate the total job cost for Job M109.

Managerial Accounting Edition 18 by Garrison

- 322) Vasilopoulos Corporation has two production departments, Casting and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Assembly
Machine-hours	17,000	11,000
Direct labor-hours	3,000	6,000
Total fixed manufacturing overhead cost	\$119,000	\$51,000
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 3.10

During the current month the company started and finished Job A182. The following data were recorded for this job:

Job A182:	Casting	Assembly
Machine-hours	50	20
Direct labor-hours	10	50
Direct materials	\$ 895	\$ 365
Direct labor cost	\$ 240	\$1,200

Required:

- Calculate the estimated total manufacturing overhead for the Casting Department.
- Calculate the estimated total manufacturing overhead for the Assembly Department.
- Calculate the predetermined overhead rate for the Casting Department.
- Calculate the predetermined overhead rate for the Assembly Department.
- Calculate the total amount of overhead applied to Job A182 in both departments.
- Calculate the total job cost for Job A182.
- Calculate the selling price for Job A182 if the company marks up its unit product costs by 20% to determine selling prices.

Managerial Accounting Edition 18 by Garrison

- 323) Hultquist Corporation has two manufacturing departments--Forming and Customizing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Forming	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$17,500	\$17,000	\$34,500
Estimated variable manufacturing overhead cost per MH	\$ 1.50	\$ 3.00	

During the period, the company started and completed two jobs--Job C and Job L. Data concerning those two jobs follow:

	Job C	Job L
Direct materials	\$ 14,500	\$ 8,200
Direct labor cost	\$ 21,400	\$ 8,200
Forming machine-hours	1,250	3,750
Customizing machine-hours	1,250	3,750

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate. Note: Round your answer to 2 decimal places.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job L. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job L. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 20% on manufacturing cost to establish selling prices. Calculate the selling price for Job L. Note: Do not round intermediate calculations.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both departments. What is the departmental predetermined overhead rate in the Forming department? Note: Round your answer to 2 decimal places.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the departmental predetermined overhead rate in the Customizing department? Note: Round your answer to 2 decimal places.

Managerial Accounting Edition 18 by Garrison

- g. Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job L? Note: Do not round intermediate calculations.
- h. Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 20% on manufacturing cost to establish selling prices. Calculate the selling price for Job L. Note: Do not round intermediate calculations.

Managerial Accounting Edition 18 by Garrison

- 324) Hultquist Corporation has two manufacturing departments--Forming and Customizing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Forming	Customizing	Total
Estimated total machine-hours (MHs)	9,000	1,000	10,000
Estimated total fixed manufacturing overhead cost	\$50,400	\$2,600	\$53,000
Estimated variable manufacturing overhead cost per MH	\$ 1.70	\$ 2.10	

During the period, the company started and completed two jobs--Job C and Job L. Data concerning those two jobs follow:

	Job C	Job L
Direct materials	\$ 15,100	\$ 6,900
Direct labor cost	\$ 20,800	\$ 8,500
Forming machine-hours	6,100	2,900
Customizing machine-hours	400	600

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate. Note: Round your answer to 2 decimal places. TBEXAM.COM
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job L. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job L. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job L. Note: Do not round intermediate calculations.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both departments. What is the departmental predetermined overhead rate in the Forming department? Note: Round your answer to 2 decimal places.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the departmental predetermined overhead rate in the Customizing department? Note: Round your answer to 2 decimal places.

Managerial Accounting Edition 18 by Garrison

- g. Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job L? Note: Do not round intermediate calculations.
- h. Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job L. Note: Do not round intermediate calculations.

Managerial Accounting Edition 18 by Garrison

- 325) Carcana Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	1,000	4,000	5,000
Estimated total fixed manufacturing overhead cost	\$4,200	\$8,800	\$13,000
Estimated variable manufacturing overhead cost per MH	\$ 1.90	\$ 2.90	

During the period, the company started and completed two jobs--Job E and Job G. Data concerning those two jobs follow:

	Job E	Job G
Direct materials	\$ 11,800	\$ 8,000
Direct labor cost	\$ 19,200	\$ 6,700
Machining machine-hours	700	300
Finishing machine-hours	1,600	2,400

Required:

- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both departments. What is the departmental predetermined overhead rate in the Machining department?
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the departmental predetermined overhead rate in the Finishing department?
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job E?
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job G?
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job E.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job G.

Managerial Accounting Edition 18 by Garrison

- g. Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. If both jobs were sold during the month, what was the company's cost of goods sold for the month?

Managerial Accounting Edition 18 by Garrison

326) Braegelmann Corporation has two production departments, Casting and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Assembly
Machine-hours	20,000	14,000
Direct labor-hours	4,000	6,000
Total fixed manufacturing overhead cost	\$110,000	\$65,400
Variable manufacturing overhead per machine-hour	\$ 1.60	
Variable manufacturing overhead per direct labor-hour		\$ 4.50

During the current month the company started and finished Job K246. The following data were recorded for this job:

Job K246:		Casting	Assembly
Machine-hours	TBEXAM.COM	60	30
Direct labor-hours		20	40
Direct materials		\$ 950	\$ 305
Direct labor cost		\$ 460	\$ 920

Required:

- Calculate the estimated total manufacturing overhead for the Casting Department.
- Calculate the estimated total manufacturing overhead for the Assembly Department.
- Calculate the predetermined overhead rate for the Casting Department.
- Calculate the predetermined overhead rate for the Assembly Department.
- Calculate the amount of overhead applied in the Casting Department to Job K246.
- Calculate the amount of overhead applied in the Assembly Department to Job K246.
- Calculate the total job cost for Job K246.
- Calculate the selling price for Job K246 if the company marks up its unit product costs by 40% to determine selling prices.

Managerial Accounting Edition 18 by Garrison

327) Matrejek Corporation has two manufacturing departments--Forming and Customizing.

The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Customizing	Total
Estimated total machine-hours (MHs)	8,000	2,000	10,000
Estimated total fixed manufacturing overhead cost	\$36,800	\$4,800	\$41,600
Estimated variable manufacturing overhead cost per MH	\$ 1.60	\$ 2.90	

During the most recent month, the company started and completed two jobs--Job D and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job D	Job K
Direct materials	\$15,600	\$6,900
Direct labor cost	\$19,100	\$8,700
Forming machine-hours	5,400	2,600
Customizing machine-hours	800	1,200

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job D.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job K.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job D.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job K.

Managerial Accounting Edition 18 by Garrison

- 328) Harnett Corporation has two manufacturing departments--Molding and Assembly. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Molding	Assembly	Total
Estimated total machine-hours (MHs)	2,000	8,000	10,000
Estimated total fixed manufacturing overhead cost	\$8,800	\$39,200	\$48,000
Estimated variable manufacturing overhead cost per MH	\$ 1.50	\$ 3.00	

During the period, the company started and completed two jobs--Job E and Job M. Data concerning those two jobs follow:

	Job E	Job M
Direct materials	\$ 13,900	\$ 7,800
Direct labor cost	\$ 21,000	\$ 7,800
Molding machine-hours	1,250	750
Assembly machine-hours	1,250	6,750

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate. Note: Round your answer to 2 decimal places. TBEXAM.COM
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job E. Note: Do not round intermediate calculations.

The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours	19,000	13,000
Direct labor-hours	2,000	9,000
Total fixed manufacturing overhead cost	\$98,800	\$84,600
Variable manufacturing overhead per machine-hour	\$ 2.10	
Variable manufacturing overhead per direct labor-hour		\$ 3.60

During the current month the company started and finished Job K369. The following data were recorded for this job:

Job K369:	Machining	Customizing
Machine-hours	90	10
Direct labor-hours	20	50

Required: Calculate the total amount of overhead applied to Job K369 in both departments.

Note: Do not round intermediate calculations.

Managerial Accounting Edition 18 by Garrison

- 332) Bierce Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	6,000	4,000	10,000
Estimated total fixed manufacturing overhead cost	\$15,600	\$21,600	\$37,200
Estimated variable manufacturing overhead cost per MH	\$ 1.50	\$ 5.00	

During the most recent month, the company started and completed two jobs--Job B and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job K
Direct materials	\$ 13,700	\$ 7,800
Direct labor cost	\$ 23,500	\$ 1,250
Machining machine-hours	4,000	2,000
Finishing machine-hours	500	3,500

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate. Note: Round your answer to 2 decimal places. TBEXAM.COM
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job B. Note: Do not round intermediate calculations.
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job K. Note: Do not round intermediate calculations. Round your answer to the nearest whole dollar amount.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both departments. What is the departmental predetermined overhead rate in the Machining department? Note: Round your answer to 2 decimal places.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the departmental predetermined overhead rate in the Finishing department? Note: Round your answer to 2 decimal places.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job B? Note: Do not round intermediate calculations.

- 334) Gercak Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	16,000	11,000
Direct labor-hours	2,000	7,000
Total fixed manufacturing overhead cost	\$100,800	\$76,300
Variable manufacturing overhead per machine-hour	\$ 1.70	
Variable manufacturing overhead per direct labor-hour		\$ 3.10

During the current month the company started and finished Job X560. The following data were recorded for this job:

Job X560	Forming	Assembly
Machine-hours	50	30
Direct labor-hours	30	40

Required:

- Calculate the estimated total manufacturing overhead for the Assembly Department.
- Calculate the predetermined overhead rate for the Forming Department.
- Calculate the total amount of overhead applied to Job X560 in both departments.

Managerial Accounting Edition 18 by Garrison

- 335) Sonneborn Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$5,100	\$23,400	\$28,500
Estimated variable manufacturing overhead cost per MH	\$ 1.50	\$ 2.50	

During the most recent month, the company started and completed two jobs--Job D and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job D	Job G
Direct materials	\$ 14,700	\$ 9,100
Direct labor cost	\$ 18,800	\$ 8,300
Molding machine-hours	700	300
Customizing machine-hours	3,600	5,400

Required:

- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job D. TBEXAM.COM
- Assume that the company uses a plantwide predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job G.
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job D?
- Assume that the company uses departmental predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job G?

Managerial Accounting Edition 18 by Garrison

- 336) Rocher Corporation has two production departments, Casting and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Finishing
Machine-hours	17,000	13,000
Direct labor-hours	4,000	6,000
Total fixed manufacturing overhead cost	\$124,100	\$52,200
Variable manufacturing overhead per machine-hour	\$ 2.30	
Variable manufacturing overhead per direct labor-hour		\$ 4.00

During the current month the company started and finished Job A394. The following data were recorded for this job:

Job A394	Casting	Finishing
Machine-hours	80	20
Direct labor-hours	10	40

Required:

TBEXAM.COM

- Calculate the estimated total manufacturing overhead for the Casting Department.
- Calculate the predetermined overhead rate for the Casting Department.
- Calculate the amount of overhead applied in the Casting Department to Job A394.

Managerial Accounting Edition 18 by Garrison

- 337) Marius Corporation has two production departments, Casting and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Finishing
Machine-hours	18,000	12,000
Direct labor-hours	4,000	6,000
Total fixed manufacturing overhead cost	\$118,800	\$57,600
Variable manufacturing overhead per machine-hour	\$ 2.20	
Variable manufacturing overhead per direct labor-hour		\$ 4.00

During the current month the company started and finished Job K895. The following data were recorded for this job:

Job K895:	Casting	Finishing
Machine-hours	70	30
Direct labor-hours	20	60

Required:

TBEXAM.COM

- Calculate the estimated total manufacturing overhead for the Finishing Department.
- Calculate the predetermined overhead rate for the Finishing Department.
- Calculate the amount of overhead applied in the Finishing Department to Job K895.

Managerial Accounting Edition 18 by Garrison

- 338) Madole Corporation has two production departments, Forming and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Customizing
Machine-hours	19,000	12,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$119,700	\$67,200
Variable manufacturing overhead per machine-hour	\$ 2.00	
Variable manufacturing overhead per direct labor-hour		\$ 4.20

During the current month the company started and finished Job K973. The following data were recorded for this job:

Job K973:	Forming	Customizing
Machine-hours	50	20
Direct labor-hours	20	50

Required:

TBEXAM.COM

- Calculate the estimated total manufacturing overhead for the Forming Department.
- Calculate the predetermined overhead rate for the Customizing Department.
- Calculate the total overhead applied to Job K973 in both departments.

Managerial Accounting Edition 18 by Garrison

- 339) Sullen Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Predetermined overhead rate	\$ 14.30 per machine-hour
Estimated total fixed manufacturing overhead from the beginning of the year	\$572,000
Estimated activity level from the beginning of the year	40,000 machine-hours
Actual total fixed manufacturing overhead	\$605,000
Actual activity level	36,700 machine-hours

Required: Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

- 340) Levi Corporation uses a predetermined overhead rate of \$23.40 per direct labor-hour. This predetermined overhead rate was based on estimated total fixed manufacturing overhead of \$702,000 and 30,000 direct labor-hours for the period. The company incurred actual total fixed manufacturing overhead of \$738,000 and 27,100 total direct labor-hours during the period.

Required: Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

Managerial Accounting Edition 18 by Garrison

341) Job 243 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$ 48,870
Direct labor-hours	405 labor-hours
Direct labor wage rate	\$ 13 per labor-hour
Machine-hours	486 machine-hours
Number of units completed	2,700 units

The company applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$11 per machine-hour.

Required: Compute the unit product cost that would appear on the job cost sheet for this job.

342) Job 652 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$ 59,400
Direct labor-hours	1,224 DLHs
Direct labor wage rate	\$ 15 per DLH
Number of units completed	3,600 units

The company applies manufacturing overhead on the basis of direct labor-hours. The predetermined overhead rate is \$35 per direct labor-hour.

Required: Compute the unit product cost that would appear on the job cost sheet for this job.

Managerial Accounting Edition 18 by Garrison

343) Pac Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In May the company completed job I07W that consisted of 48,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job I07W shows that the total cost for the job was \$3,201,600. During the month, 21,000 completed units from job I07W were sold.

Required: Determine the cost of goods sold that would appear on the income statement for May.

344) Pac Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In May the company completed job I07W that consisted of 20,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job I07W shows that the total cost for the job was \$1,054,000. During the month, 7,000 completed units from job I07W were sold.

Required: Determine the cost of goods sold that would appear on the income statement for May.

TBEXAM.COM

345) Pac Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In May the company completed job I07W that consisted of 20,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job I07W shows that the total cost for the job was \$1,054,000. During the month, 7,000 completed units from job I07W were sold.

Required: Determine the finished goods inventory at the end of May.

Managerial Accounting Edition 18 by Garrison

- 346) Broberg Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In August the company completed job A39E that consisted of 14,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job A39E shows the following costs:

Beginning balance	\$ 29,400
Direct materials	\$ 498,400
Direct labor cost	\$ 103,600
Manufacturing overhead cost applied	\$ 186,200

During the month, 3,000 completed units from job A39E were sold.

Required: Determine the cost of goods sold that would appear on the income statement for August.

- 347) Broberg Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In August the company completed job A39E that consisted of 25,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job A39E shows the following costs:

Beginning balance	\$ 616,800
Direct materials	\$ 608,400
Direct labor cost	\$ 213,600
Manufacturing overhead cost applied	\$ 296,200

During the month, 14,000 completed units from job A39E were sold.

Required: Determine the finished goods inventory at the end of August.

Managerial Accounting Edition 18 by Garrison

- 348) Broberg Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In August the company completed job A39E that consisted of 14,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job A39E shows the following costs:

Beginning balance	\$ 29,400
Direct materials	\$ 498,400
Direct labor cost	\$ 103,600
Manufacturing overhead cost applied	\$ 186,200

During the month, 3,000 completed units from job A39E were sold.

Required: Determine the finished goods inventory at the end of August.

- 349) Westgaard Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In March, the company completed job G87M that consisted of 21,200 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G87M shows that the job's total cost was \$1,180,300. During the month, 4,200 completed units from job G87M were sold.

Required: Determine the cost of goods sold for March.

- 350) Westgaard Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In March, the company completed job G87M that consisted of 22,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G87M shows that the job's total cost was \$1,179,200. During the month, 4,000 completed units from job G87M were sold.

Required: Determine the cost of goods sold for March.

Managerial Accounting Edition 18 by Garrison

- 351) Westgaard Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In March, the company completed job G87M that consisted of 21,700 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G87M shows that the job's total cost was \$1,181,500. During the month, 4,300 completed units from job G87M were sold.

Required: Determine the finished goods inventory at the end of March.

- 352) Westgaard Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In March, the company completed job G87M that consisted of 22,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G87M shows that the job's total cost was \$1,179,200. During the month, 4,000 completed units from job G87M were sold.

Required: Determine the finished goods inventory at the end of March.

TBEXAM.COM

- 353) Bartholemew Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In February the company completed job G43C that consisted of 20,700 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G43C shows that the job's total cost was \$1,262,700. During the month, 15,700 completed units from job G43C were sold.

Required: Determine the cost of goods sold for February.

Managerial Accounting Edition 18 by Garrison

354) Bartholemew Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In February the company completed job G43C that consisted of 19,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G43C shows that the job's total cost was \$1,126,700. During the month, 14,000 completed units from job G43C were sold.

Required: Determine the cost of goods sold for February.

355) Bartholemew Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In February the company completed job G43C that consisted of 19,500 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G43C shows that the job's total cost was \$1,136,500. During the month, 14,000 completed units from job G43C were sold.

Required: Determine the finished goods inventory at the end of February.

TBEXAM.COM

356) Bartholemew Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In February the company completed job G43C that consisted of 19,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G43C shows that the job's total cost was \$1,126,700. During the month, 14,000 completed units from job G43C were sold.

Required: Determine the finished goods inventory at the end of February.

Managerial Accounting Edition 18 by Garrison

- 357) Beland Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In December the company completed job K79D that consisted of 23,500 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job K79D shows the following costs:

Beginning balance	\$ 58,300
Direct materials	\$ 490,400
Direct labor cost	\$ 152,800
Manufacturing overhead cost applied	\$ 451,000

During the month, 5,500 completed units from job K79D were sold.

Required: Determine the cost of goods sold for December.

- 358) Beland Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In December the company completed job K79D that consisted of 23,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job K79D shows the following costs: TBEXAM.COM

Beginning balance	\$ 55,200
Direct materials	\$ 489,900
Direct labor cost	\$ 151,800
Manufacturing overhead cost applied	\$ 448,500

During the month, 5,000 completed units from job K79D were sold.

Required: Determine the cost of goods sold for December.

Managerial Accounting Edition 18 by Garrison

- 359) Beland Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In December the company completed job K79D that consisted of 23,100 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job K79D shows the following costs:

Beginning balance	\$ 58,100
Direct materials	\$ 490,600
Direct labor cost	\$ 153,200
Manufacturing overhead cost applied	\$ 451,000

During the month, 5,400 completed units from job K79D were sold.

Required: Determine the finished goods inventory at the end of December.

- 360) Beland Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In December the company completed job K79D that consisted of 23,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job K79D shows the following costs: TBEXAM.COM

Beginning balance	\$ 55,200
Direct materials	\$ 489,900
Direct labor cost	\$ 151,800
Manufacturing overhead cost applied	\$ 448,500

During the month, 5,000 completed units from job K79D were sold.

Required: Determine the finished goods inventory at the end of December.

Managerial Accounting Edition 18 by Garrison

361) Henkes Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the company estimated the labor-hours for the upcoming year at 66,000 labor-hours. The estimated variable manufacturing overhead was \$8.41 per labor-hour and the estimated total fixed manufacturing overhead was \$1,533,180. The actual labor-hours for the year turned out to be 68,400 labor-hours.

Required: Compute the company's predetermined overhead rate for the recently completed year.

362) McCaughan Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. Data for the most recently completed year appear below:

Estimates made at the beginning of the year:

Estimated labor-hours	37,000
Estimated variable manufacturing overhead	\$ 4.43 per labor-hour
Estimated total fixed manufacturing overhead	\$ 705,220
Actual labor-hours for the year	32,100

Required: Compute the company's predetermined overhead rate for the recently completed year.

Managerial Accounting Edition 18 by Garrison

363) Moscone Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the company estimated the labor-hours for the upcoming year at 78,000 labor-hours. The estimated variable manufacturing overhead was \$9.99 per labor-hour and the estimated total fixed manufacturing overhead was \$985,920.

Required: Compute the company's predetermined overhead rate.

364) Lightner Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the upcoming year appear below:

Estimated machine-hours	50,000
Estimated variable manufacturing overhead	\$ 8.82 per machine-hour
Estimated total fixed manufacturing overhead	\$ 1,077,000

Required: Compute the company's predetermined overhead rate.

TBEXAM.COM

365) Job 243 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$ 48,870
Direct labor-hours	405 labor-hours
Direct labor wage rate	\$ 13 per labor-hour
Machine-hours	486 machine-hours
Number of units completed	2,700 units

The company applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$11 per machine-hour.

Required: Compute the unit product cost that would appear on the job cost sheet for this job.

Managerial Accounting Edition 18 by Garrison

366) Job 652 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$ 59,400
Direct labor-hours	1,224 DLHs
Direct labor wage rate	\$ 15 per DLH
Number of units completed	3,600 units

The company applies manufacturing overhead on the basis of direct labor-hours. The predetermined overhead rate is \$35 per direct labor-hour.

Required: Compute the unit product cost that would appear on the job cost sheet for this job.

367) Pac Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In May the company completed job I07W that consisted of 20,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job I07W shows that the total cost for the job was \$1,054,000. During the month, 7,000 completed units from job I07W were sold.

TBEXAM.COM

Required: Determine the cost of goods sold that would appear on the income statement for May.

368) Pac Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In May the company completed job I07W that consisted of 20,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job I07W shows that the total cost for the job was \$1,054,000. During the month, 7,000 completed units from job I07W were sold.

Required: Determine the finished goods inventory at the end of May.

Managerial Accounting Edition 18 by Garrison

- 369) Broberg Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In August the company completed job A39E that consisted of 14,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job A39E shows the following costs:

Beginning balance	\$ 29,400
Direct materials	\$ 498,400
Direct labor cost	\$ 103,600
Manufacturing overhead cost applied	\$ 186,200

During the month, 3,000 completed units from job A39E were sold.

Required: Determine the cost of goods sold that would appear on the income statement for August.

- 370) Broberg Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In August the company completed job A39E that consisted of 14,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job A39E shows the following costs:

Beginning balance	\$ 29,400
Direct materials	\$ 498,400
Direct labor cost	\$ 103,600
Manufacturing overhead cost applied	\$ 186,200

During the month, 3,000 completed units from job A39E were sold.

Required: Determine the finished goods inventory at the end of August.

Managerial Accounting Edition 18 by Garrison

371) Westgaard Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In March, the company completed job G87M that consisted of 22,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G87M shows that the job's total cost was \$1,179,200. During the month, 4,000 completed units from job G87M were sold.

Required: Determine the cost of goods sold for March.

372) Westgaard Incorporated uses a job-order costing system and its total manufacturing overhead applied always equals its total manufacturing overhead. In March, the company completed job G87M that consisted of 22,000 units of one of the company's standard products. No other jobs were in process, completed, or sold during the month. The job cost sheet for job G87M shows that the job's total cost was \$1,179,200. During the month, 4,000 completed units from job G87M were sold.

Required: Determine the finished goods inventory at the end of March.

20) B

Estimated total manufacturing overhead = \$838,800 + (\$3.10 per machine-hour × 72,700 machine-hours) = \$1,064,170

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,064,170 ÷ 72,700 machine-hours = \$14.64 per machine-hour

21) B

Estimated total manufacturing overhead = \$1,058,040 + (\$3.01 per machine-hour × 36,000 machine-hours) = \$1,166,400

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,166,400 ÷ 36,000 machine-hours = \$32.40 per machine-hour

22) A

Estimated total manufacturing overhead = \$789,048 + (\$4.47 per machine-hour × 28,100 machine-hours) = \$914,655

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$914,655 ÷ 28,100 machine-hours = \$32.55 per machine-hour

23) A

Managerial Accounting Edition 18 by Garrison

Estimated total manufacturing overhead = \$2,347,090 + (\$7.38 per machine-hour × 79,000 machine-hours) = \$2,930,110

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$2,930,110 ÷ 79,000 machine-hours = \$37.09 per machine-hour

24) C

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$144,000 + (\$2.00 per machine-hour × 60,000 machine-hours) = \$144,000 + \$120,000 = \$264,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$264,000 ÷ 60,000 machine-hours = \$4.40 per machine-hour

25) A

Estimated total manufacturing overhead = \$724,827 + (\$5.09 per labor-hour × 30,700 labor-hours) = \$881,090

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$881,090 ÷ 30,700 labor-hours = \$28.70 per labor-hour

26) A

Estimated total manufacturing overhead = \$1,026,260 + (\$6.25 per labor-hour × 46,000 labor-hours) = \$1,313,760

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,313,760 ÷ 46,000 labor-hours = \$28.56 per labor-hour

27) D

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$440,000 + (\$2.20 per machine-hour × 50,000 machine-hours) = \$440,000 + \$110,000 = \$550,000

28) B

Estimated total manufacturing overhead = \$1,228,770 + (\$5.21 per machine-hour × 41,000 machine-hours) = \$1,442,380

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,442,380 ÷ 41,000 machine-hours = \$35.18 per machine-hour

29) B

Managerial Accounting Edition 18 by Garrison

Estimated total manufacturing overhead = \$794,430 + (\$6.76 per machine-hour × 39,000 machine-hours) = \$1,058,070

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,058,070 ÷ 39,000 machine-hours = \$27.13 per machine-hour

30) A

Salary of production supervisor	\$ 40,000
Indirect materials	8,000
Rent on factory equipment	20,000
Manufacturing overhead	<u>\$ 68,000</u>

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base

Predetermined overhead rate = \$68,000 ÷ 16,000 machine-hours = \$4.25 per machine-hour

31) D

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$189,000 + (\$2.50 per direct labor-hour × 30,000 direct labor-hours) = \$189,000 + \$75,000 = \$264,000

TBEXAM.COM

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$264,000 ÷ 30,000 direct labor-hours = \$8.80 per direct labor-hour

32) B

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$357,000 + (\$3.90 per machine-hour × 70,000 machine-hours) = \$357,000 + \$273,000 = \$630,000

33) A

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$ 40,600
Estimated variable manufacturing overhead (\$1.30 per MH × 7,000 MHs)	9,100
Estimated total manufacturing overhead cost	<u>\$ 49,700</u>

Finishing

Estimated fixed manufacturing overhead	\$ 8,100
Estimated variable manufacturing overhead (\$2.80 per MH × 3,000 MHs)	8,400
Estimated total manufacturing overhead cost	<u>\$ 16,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$49,700 + \$16,500 = \$66,200) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 66,200
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 6.62 per MH

34) A

TBEXAM.COM

Estimated total fixed manufacturing overhead (a)	\$ 492,000
Estimated activity level (b)	30,000
Predetermined overhead rate (a) ÷ (b)	<u>\$ 16.40</u>
Actual activity level	28,300
Manufacturing overhead applied	<u>\$ 464,120</u>

35) A

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$344,000 + (\$3.90 per machine-hour × 40,000 machine-hours) = \$344,000 + \$156,000 = \$500,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$500,000 ÷ 40,000 machine-hours = \$12.50 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.50 per machine-hour × 60 machine-hours = \$750

36) A

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$ 52,200
Estimated variable manufacturing overhead (\$2.00 per MH × 9,000 MHs)	18,000
Estimated total manufacturing overhead cost	<u>\$ 70,200</u>

Assembly

Estimated fixed manufacturing overhead	\$ 2,400
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	2,100
Estimated total manufacturing overhead cost	<u>\$ 4,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$70,200 + \$4,500 = \$74,700) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 74,700
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 7.47 per MH

The overhead applied to Job B is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$7.47 per MH × (6,100 MHs + 400 MHs)

= \$7.47 per MH × (6,500 MHs)

= \$48,555

37) B

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$ 44,000
Estimated variable manufacturing overhead (\$1.90 per MH × 8,000 MHs)	15,200
Estimated total manufacturing overhead cost	<u>\$ 59,200</u>

Assembly

Estimated fixed manufacturing overhead	\$ 4,200
Estimated variable manufacturing overhead (\$3.00 per MH × 2,000 MHs)	6,000
Estimated total manufacturing overhead cost	<u>\$ 10,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$59,200 + \$10,200 = \$69,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 69,400
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 6.94 per MH

The overhead applied to Job H is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$6.94 per MH × (2,600 MHs + 1,200 MHs)

= \$6.94 per MH × (3,800 MHs)

= \$26,372

38) D

Overhead applied = Predetermined overhead rate × Amount of the allocation base incurred \$600

= Predetermined overhead rate × \$150

Predetermined overhead rate = \$600 ÷ \$150 = 4.0

Direct materials	\$ 480
Direct labor (\$150 + \$100)	250
Manufacturing overhead applied (4.0 × \$250)	1,000
Total product cost	<u>\$ 1,730</u>

39) B

Managerial Accounting Edition 18 by Garrison

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$105,000 + (\$3.00 per machine-hour × 70,000 machine-hours) =

\$105,000 + \$210,000 = \$315,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$315,000 ÷ 70,000 machine-hours = \$4.50 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$4.50 per machine-hour × 60 machine-hours = \$270

40) A

Estimated total fixed manufacturing overhead (a)	\$ 684,000
Estimated activity level (b)	40,000
Predetermined overhead rate (a) ÷ (b)	<u>\$ 17.10</u>

Estimated total machine-hours (b)	2,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 6.50 per MH

Assembly Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$ 8,100
Estimated variable manufacturing overhead (\$2.40 per MH × 3,000 MHs)	7,200
Estimated total manufacturing overhead cost (a)	<u>\$ 15,300</u>
Estimated total machine-hours (b)	3,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 5.10 per MH

Manufacturing overhead applied to Job L:

Machining (\$6.50 per MH × 600 MHs)	\$ 3,900
Assembly (\$5.10 per MH × 1,800 MHs)	9,180
Total manufacturing overhead applied	<u><u>\$ 13,080</u></u>

The selling price for Job L would be calculated as follows:

Direct materials	\$ 7,100
Direct labor cost	6,700
Manufacturing overhead applied	13,080
Total manufacturing cost	<u>\$ 26,880</u>
Markup (50%)	<u>13,440</u>
Selling price	<u><u>\$ 40,320</u></u>

54) A

Managerial Accounting Edition 18 by Garrison

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$110,500 + (\$1.60 per machine-hour × 17,000 machine-hours)

= \$110,500 + \$27,200 = \$137,700

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$137,700 ÷ 17,000 machine-hours = \$8.10 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.10 per machine-hour × 70 machine-hours = \$567

Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$78,300 + (\$3.30 per direct labor-hour × 9,000 direct labor-hours)

= \$78,300 + \$29,700 = \$108,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$108,000 ÷ 9,000 direct labor-hours = \$12.00 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.00 per direct labor-hour × 50 direct labor-hours = \$600

	Forming	Finishing	Total
Direct materials	\$ 650	\$ 330	\$ 980
Direct labor	\$ 380	\$ 1,900	2,280

90) C

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$416,000 + (\$3.10 per machine-hour × 80,000 machine-hours) = \$416,000 + \$248,000 = \$664,000

91) A

Managerial Accounting Edition 18 by Garrison

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$416,000 + (\$3.10 per machine-hour × 80,000 machine-hours) = \$416,000 + \$248,000 = \$664,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$664,000 ÷ 80,000 machine-hours = \$8.30 per machine-hour

92) A

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$36,000 + (\$2.80 per direct labor-hour × 10,000 direct labor-hours) = \$36,000 + \$28,000 = \$64,000

93) B

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$36,000 + (\$2.80 per direct labor-hour × 10,000 direct labor-hours) = \$36,000 + \$28,000 = \$64,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$64,000 ÷ 10,000 direct labor-hours = \$6.40 per direct labor-hour

94) D

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 39,200
Estimated variable manufacturing overhead (\$1.90 per MH × 7,000 MHs)	13,300
Estimated total manufacturing overhead cost	<u>\$ 52,500</u>

Assembly

Estimated fixed manufacturing overhead	\$ 6,600
Estimated variable manufacturing overhead (\$2.10 per MH × 3,000 MHs)	6,300
Estimated total manufacturing overhead cost	<u>\$ 12,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$52,500 + \$12,900 = \$65,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 65,400
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 6.54 per MH

95) C

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 39,200
Estimated variable manufacturing overhead (\$1.90 per MH × 7,000 MHs)	13,300
Estimated total manufacturing overhead cost	<u>\$ 52,500</u>

Assembly

Estimated fixed manufacturing overhead	\$ 6,600
Estimated variable manufacturing overhead (\$2.10 per MH × 3,000 MHs)	6,300
Estimated total manufacturing overhead cost	<u>\$ 12,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$52,500 + \$12,900 = \$65,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 65,400
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 6.54 per MH

The overhead applied to Job B is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$6.54 per MH × (4,800 MHs + 1,200 MHs)
 = \$6.54 per MH × (6,000 MHs)
 = \$39,240

96) B

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 39,200
Estimated variable manufacturing overhead (\$1.90 per MH × 7,000 MHs)	13,300
Estimated total manufacturing overhead cost	<u>\$ 52,500</u>

Assembly

Estimated fixed manufacturing overhead	\$ 6,600
Estimated variable manufacturing overhead (\$2.10 per MH × 3,000 MHs)	6,300
Estimated total manufacturing overhead cost	<u>\$ 12,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$52,500 + \$12,900 = \$65,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 65,400
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 6.54 per MH

The overhead applied to Job G is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$6.54 per MH × (2,200 MHs + 1,800 MHs)

= \$6.54 per MH × (4,000 MHs)

= \$26,160

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$ 25,000
Estimated variable manufacturing overhead (\$1.50 per MH × 3,250 MHs)	4,875
Estimated total manufacturing overhead cost	<u>\$ 29,875</u>

Finishing

Estimated fixed manufacturing overhead	\$ 4,800
Estimated variable manufacturing overhead (\$3.00 per MH × 1,750 MHs)	5,250
Estimated total manufacturing overhead cost	<u>\$ 10,050</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$29,875 + \$10,050 = \$39,925) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 39,925
Estimated total machine hours	5,000 MHs
Predetermined overhead rate	\$ 7.99 per MH

The overhead applied to Job M is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$7.99 per MH × (2,000 MHs + 500 MHs)

= \$7.99 per MH × (2,500 MHs)

= \$19,975

Job M's manufacturing cost:

Direct materials	\$ 9,800
Direct labor cost	10,200
Manufacturing overhead applied	19,975
Total manufacturing cost	<u>\$ 39,975</u>

121) C

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$ 19,600
Estimated variable manufacturing overhead (\$1.10 per MH × 4,000 MHs)	4,400
Estimated total manufacturing overhead cost	<u>\$ 24,000</u>

Finishing

Estimated fixed manufacturing overhead	\$ 2,400
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	2,100
Estimated total manufacturing overhead cost	<u>\$ 4,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,000 + \$4,500 = \$28,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 28,500
Estimated total machine hours	5,000 MHs
Predetermined overhead rate	\$ 5.70 per MH

The overhead applied to Job M is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$5.70 per MH × (1,300 MHs + 600 MHs)

= \$5.70 per MH × (1,900 MHs)

= \$10,830

Job M's manufacturing cost:

Direct materials	\$ 7,500
Direct labor cost	7,400
Manufacturing overhead applied	10,830
Total manufacturing cost	<u>\$ 25,730</u>

122) B

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$ 18,000
Estimated variable manufacturing overhead (\$1.00 per MH × 6,500 MHs)	6,500
Estimated total manufacturing overhead cost	<u>\$ 24,500</u>

Finishing

Estimated fixed manufacturing overhead	\$ 5,500
Estimated variable manufacturing overhead (\$2.00 per MH × 3,500 MHs)	7,000
Estimated total manufacturing overhead cost	<u>\$ 12,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,500 + \$12,500 = \$37,000) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 37,000
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 3.70 per MH

The overhead applied to Job A is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$3.70 per MH × (2,500 MHs + 2,500 MHs)

= \$3.70 per MH × (5,000 MHs)

= \$18,500

Job A's manufacturing cost:

Direct materials	\$ 16,800
Direct labor cost	23,700
Manufacturing overhead applied	18,500
Total manufacturing cost	<u>\$ 59,000</u>

The selling price for Job A:

Total manufacturing cost	\$ 59,000
Markup (30%)	17,700
Selling price	<u>\$ 76,700</u>

123) B

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$ 27,500
Estimated variable manufacturing overhead (\$1.70 per MH × 5,000 MHs)	8,500
Estimated total manufacturing overhead cost	<u>\$ 36,000</u>

Customizing

Estimated fixed manufacturing overhead	\$ 10,500
Estimated variable manufacturing overhead (\$2.60 per MH × 5,000 MHs)	13,000
Estimated total manufacturing overhead cost	<u>\$ 23,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$36,000 + \$23,500 = \$59,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 59,500
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 5.95 per MH

The overhead applied to Job C is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$5.95 per MH × (3,400 MHs + 2,000 MHs)
 = \$5.95 per MH × (5,400 MHs)
 = \$32,130

151) A

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$ 27,500
Estimated variable manufacturing overhead (\$1.70 per MH × 5,000 MHs)	8,500
Estimated total manufacturing overhead cost	<u>\$ 36,000</u>

Customizing

Estimated fixed manufacturing overhead	\$ 10,500
Estimated variable manufacturing overhead (\$2.60 per MH × 5,000 MHs)	13,000
Estimated total manufacturing overhead cost	<u>\$ 23,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$36,000 + \$23,500 = \$59,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 59,500
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 5.95 per MH

The overhead applied to Job G is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job
 $= \$5.95 \text{ per MH} \times (1,600 \text{ MHs} + 3,000 \text{ MHs})$
 $= \$5.95 \text{ per MH} \times (4,600 \text{ MHs})$
 $= \$27,370$

Job G's manufacturing cost:

Direct materials	\$ 6,800
Direct labor cost	7,900
Manufacturing overhead applied	27,370
Total manufacturing cost	<u>\$ 42,070</u>

152) D

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$624,000 + (\$3.10 per machine-hour × 80,000 machine-hours) = \$624,000 + \$248,000 = \$872,000

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 33,600
Estimated variable manufacturing overhead (\$1.80 per MH × 6,000 MHs)	10,800
Estimated total manufacturing overhead cost	<u>\$ 44,400</u>

Customizing

Estimated fixed manufacturing overhead	\$ 10,000
Estimated variable manufacturing overhead (\$2.80 per MH × 4,000 MHs)	11,200
Estimated total manufacturing overhead cost	<u>\$ 21,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$44,400 + \$21,200 = \$65,600) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 65,600
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 6.56 per MH

The overhead applied to Job J is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$6.56 per MH × (1,900 MHs + 2,400 MHs)
 = \$6.56 per MH × (4,300 MHs)
 = \$28,208

177) B

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 33,600
Estimated variable manufacturing overhead (\$1.80 per MH × 6,000 MHs)	10,800
Estimated total manufacturing overhead cost	<u>\$ 44,400</u>

Customizing

Estimated fixed manufacturing overhead	\$ 10,000
Estimated variable manufacturing overhead (\$2.80 per MH × 4,000 MHs)	11,200
Estimated total manufacturing overhead cost	<u>\$ 21,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$44,400 + \$21,200 = \$65,600) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 65,600
Estimated total machine-hours	10,000 MHs
Predetermined overhead rate	\$ 6.56 per MH

The overhead applied to Job C is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours
incurred by the job

$$= \$6.56 \text{ per MH} \times (4,100 \text{ MHs} + 1,600 \text{ MHs})$$

$$= \$6.56 \text{ per MH} \times (5,700 \text{ MHs})$$

$$= \$37,392$$

Job C's manufacturing cost:

Direct materials	\$ 11,300
Direct labor cost	18,500
Manufacturing overhead applied	37,392
Total manufacturing cost	<u>\$ 67,192</u>

178) A

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$285,000 + (\$3.80 per direct labor-hour × 50,000 direct labor-hours) = \$285,000 + \$190,000 = \$475,000

201) C

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 4,800
Estimated variable manufacturing overhead (\$1.10 per MH × 1,000 MHs)	1,100
Estimated total manufacturing overhead cost	<u>\$ 5,900</u>

Customizing

Estimated fixed manufacturing overhead	\$ 23,400
Estimated variable manufacturing overhead (\$2.50 per MH × 9,000 MHs)	22,500
Estimated total manufacturing overhead cost	<u>\$ 45,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$5,900 + \$45,900 = \$51,800) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 51,800
Estimated total machine-hours	10,000 MHs
Predetermined overhead rate	\$ 5.18 per MH

The overhead applied to Job A is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$5.18 per MH × (700 MHs + 3,600 MHs)

= \$5.18 per MH × (4,300 MHs)

= \$22,274

Job A's manufacturing cost:

Direct materials	\$ 12,000
Direct labor cost	20,700
Manufacturing overhead applied	22,274
Total manufacturing cost	<u>\$ 54,974</u>

The selling price for Job A:

Total manufacturing cost	\$ 54,974
Markup (50%)	27,487
Selling price	<u>\$ 82,461</u>

202) B

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 4,800
Estimated variable manufacturing overhead (\$1.10 per MH × 1,000 MHs)	1,100
Estimated total manufacturing overhead cost	<u>\$ 5,900</u>

Customizing

Estimated fixed manufacturing overhead	\$ 23,400
Estimated variable manufacturing overhead (\$2.50 per MH × 9,000 MHs)	22,500
Estimated total manufacturing overhead cost	<u>\$ 45,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$5,900 + \$45,900 = \$51,800) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 51,800
Estimated total machine-hours	10,000 MHs
Predetermined overhead rate	\$ 5.18 per MH

The overhead applied to Job J is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours
incurred by the job

TBEXAM.COM

= \$5.18 per MH × (300 MHs + 5,400 MHs)
= \$5.18 per MH × (5,700 MHs)
= \$29,526

Job J's manufacturing cost:

Direct materials	\$ 7,700
Direct labor cost	6,400
Manufacturing overhead applied	29,526
Total manufacturing cost	<u>\$ 43,626</u>

The selling price for Job J:

Total manufacturing cost	\$ 43,626
Markup (50%)	21,813

213) B

Managerial Accounting Edition 18 by Garrison

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$102,000 + (\$1.70 per machine-hour × 17,000 machine-hours)

= \$102,000 + \$28,900 = \$130,900

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$130,900 ÷ 17,000 machine-hours = \$7.70 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.70 per machine-hour × 80 machine-hours = \$616

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$61,200 + (\$4.10 per direct labor-hour × 6,000 direct labor-hours)

= \$61,200 + \$24,600 = \$85,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$85,800 ÷ 6,000 direct labor-hours = \$14.30 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$14.30 per direct labor-hour × 50 direct labor-hours = \$715

	Machining	Customizing	Total
Direct materials	\$ 720	\$ 380	\$ 1,100
Direct labor	\$ 900	\$ 1,500	2,400
Manufacturing overhead applied	\$ 616	\$ 715	1,331
Total cost of Job T268			<u>\$ 4,831</u>
Total cost of Job T268	\$ 4,831.00		
Markup (\$4,831.00 × 40%)	1,932.40		
Selling price	<u>\$ 6,763.40</u>		

214) A

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$ 16,500
Estimated variable manufacturing overhead (\$1.70 per MH × 3,000 MHs)	5,100
Estimated total manufacturing overhead cost	<u>\$ 21,600</u>

Customizing

Estimated fixed manufacturing overhead	\$ 20,300
Estimated variable manufacturing overhead (\$2.50 per MH × 7,000 MHs)	17,500
Estimated total manufacturing overhead cost	<u>\$ 37,800</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$21,600 + \$37,800 = \$59,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 59,400
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$5.94 per MH

The overhead applied to Job A is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$5.94 per MH × (2,000 MHs + 2,800 MHs)

= \$5.94 per MH × (4,800 MHs)

= \$28,512

215) C

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$ 16,500
Estimated variable manufacturing overhead (\$1.70 per MH × 3,000 MHs)	5,100
Estimated total manufacturing overhead cost	<u>\$ 21,600</u>

Customizing

Estimated fixed manufacturing overhead	\$ 20,300
Estimated variable manufacturing overhead (\$2.50 per MH × 7,000 MHs)	17,500
Estimated total manufacturing overhead cost	<u>\$ 37,800</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$21,600 + \$37,800 = \$59,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 59,400
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 5.94 per MH

The overhead applied to Job H is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

TBEXAM.COM

= \$5.94 per MH × (1,000 MHs + 4,200 MHs)

= \$5.94 per MH × (5,200 MHs)

= \$30,888

216) D

Managerial Accounting Edition 18 by Garrison

Forming Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$ 16,500
Estimated variable manufacturing overhead (\$1.70 per MH × 3,000 MHs)	5,100
Estimated total manufacturing overhead cost (a)	<u>\$ 21,600</u>
Estimated total machine-hours (b)	3,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$7.20 per MH

Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$ 20,300
Estimated variable manufacturing overhead (\$2.50 per MH × 7,000 MHs)	17,500

Managerial Accounting Edition 18 by Garrison

Step 1: Calculate the total job cost:

Beginning balance	\$ 186,700
Direct materials	590,500
Direct labor cost	518,700
Manufacturing overhead cost applied	629,100
Total job cost	<u>\$ 1,925,000</u>

Step 2: Compute the unit product cost:

Total job cost (a)	\$ 1,925,000
Number of units in the job (b)	35,000
Unit product cost (a) ÷ (b)	\$ 55.00

Step 3: Compute the cost of goods sold:

Number of units sold (a)	15,000
Unit product cost (b)	\$ 55.00
Cost of goods sold (a) × (b)	\$ 825,000

262) B

Step 1: Calculate the total job cost:

Beginning balance	\$ 66,700
Direct materials	494,500
Direct labor cost	158,700
Manufacturing overhead cost applied	269,100
Total job cost	<u>\$ 989,000</u>

Step 2: Compute the unit product cost:

Total job cost (a)	\$ 989,000
Number of units in the job (b)	23,000
Unit product cost (a) ÷ (b)	\$ 43.00

Step 3: Compute the cost of goods sold:

Number of units sold (a)	3,000
Unit product cost (b)	\$ 43.00
Cost of goods sold (a) × (b)	\$ 129,000

263) D

Managerial Accounting Edition 18 by Garrison

Step 1: Calculate the total job cost:

Beginning balance	\$ 66,700
Direct materials	494,500
Direct labor cost	158,700
Manufacturing overhead cost applied	269,100
Total job cost	<u>\$ 989,000</u>

Step 2: Compute the unit product cost:

Total job cost (a)	\$ 989,000
Number of units in the job (b)	23,000
Unit product cost (a) ÷ (b)	\$ 43.00

Step 3: Compute the finished goods inventory:

Number of units in ending inventory (a)	20,000
Unit product cost (b)	\$ 43.00
Finished goods inventory (a) × (b)	\$ 860,000

264) D

Total manufacturing cost for the job (a)	\$ 1,118,600

Estimated activity level (b)	10,000 machine-hours
Predetermined overhead rate (a) ÷ (b)	\$ 11.40 per machine-hour
Actual activity level	9,400 machine-hours
Manufacturing overhead applied	\$ 107,160

292) Essay

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$11,600
Estimated variable manufacturing overhead (\$1.90 per MH × 2,000 MHs)	3,800
Estimated total manufacturing overhead cost	<u>\$15,400</u>

Customizing

Estimated fixed manufacturing overhead	\$ 7,200
Estimated variable manufacturing overhead (\$2.80 per MH × 3,000 MHs)	8,400
Estimated total manufacturing overhead cost	<u>\$15,600</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$15,400 + \$15,600 = \$31,000) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$31,000
Estimated total machine hours	5,000 MHs
Predetermined overhead rate	\$ 6.20 per MH

The overhead applied to Job F is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job
 $= \$6.20 \text{ per MH} \times (1,400 \text{ MHs} + 1,200 \text{ MHs})$
 $= \$6.20 \text{ per MH} \times (2,600 \text{ MHs})$
 $= \$16,120$

The overhead applied to Job L is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job
 $= \$6.20 \text{ per MH} \times (600 \text{ MHs} + 1,800 \text{ MHs})$
 $= \$6.20 \text{ per MH} \times (2,400 \text{ MHs})$
 $= \$14,880$

Job F's manufacturing cost:

Direct materials	\$ 10,600
Direct labor cost	24,400
Manufacturing overhead applied	16,120
Total manufacturing cost	<u>\$ 51,120</u>

Job L's manufacturing cost:

Direct materials	\$ 6,600
Direct labor cost	8,600
Manufacturing overhead applied	<u>14,880</u>

Managerial Accounting Edition 18 by Garrison

Total manufacturing cost	\$30,080
The selling price for Job F:	
Total manufacturing cost	\$ 51,120
Markup (50%)	25,560
Selling price	\$ 76,680
The selling price for Job L:	
Total manufacturing cost	\$ 30,080
Markup (50%)	15,040
Selling price	\$ 45,120

293) Essay

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$460,000 + (\$3.10 per machine-hour × 50,000 machine-hours) = \$460,000 + \$155,000 = \$615,000
 Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$615,000 ÷ 50,000 machine-hours = \$12.30 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.30 per machine-hour × 150 machine-hours = \$1,845

304) Essay

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$ 25,000
Estimated variable manufacturing overhead (\$1.80 per machine hour × 5,000 machine hours)	9,000
Estimated total manufacturing overhead cost	<u>\$ 34,000</u>

Customizing

Estimated fixed manufacturing overhead	\$ 20,000
Estimated variable manufacturing overhead (\$2.70 per machine hour × 5,000 machine hours)	13,500
Estimated total manufacturing overhead cost	<u>\$ 33,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$34,000 + \$33,500 = \$67,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$ 67,500
Estimated total machine hours	10,000 machine hours
Predetermined overhead rate	\$ 6.75 per machine hour

Direct materials	\$ 12,700
Direct labor cost	\$ 19,100
Manufacturing overhead applied	43,200
Total manufacturing cost	<u>\$ 75,000</u>

Direct materials	\$ 6,400
Direct labor cost	\$ 7,900
Manufacturing overhead applied	38,475
Total manufacturing cost	<u>\$ 52,775</u>

Total manufacturing cost	\$ 75,000
Markup (30%)	22,500
Selling price	<u>\$ 97,500</u>

Total manufacturing cost	\$ 52,775
Markup (30%)	15,833
Selling price	<u>\$ 68,608</u>

Total manufacturing cost assigned to Job F	\$ 75,000
--	-----------

Managerial Accounting Edition 18 by Garrison

Total manufacturing cost assigned to Job K	52,775
Cost of goods sold	<u>\$ 127,775</u>

305) Essay

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments. Molding

Estimated fixed manufacturing overhead	\$ 21,000
Estimated variable manufacturing overhead (\$1.50 per MH × 5,000 MHs)	7,500

Estimated total manufacturing overhead cost	<u>\$ 28,500</u>
---	------------------

Customizing

Estimated fixed manufacturing overhead	\$ 14,000
Estimated variable manufacturing overhead (\$2.40 per MH × 5,000 MHs)	12,000

Estimated total manufacturing overhead cost	<u>\$ 26,000</u>
---	------------------

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$28,500 + \$26,000 = \$54,500) to calculate the *plantwide* predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$54,500
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$5.45 per MH

Direct materials	\$ 12,700
Direct labor cost	19,100
Manufacturing overhead applied	29,430
Total manufacturing cost	<u>\$ 61,230</u>

Direct materials	\$ 6,400
Direct labor cost	7,900
Manufacturing overhead applied	25,070
Total manufacturing cost	<u>\$39,370</u>

The selling price for Job F:

Total manufacturing cost	\$ 61,230
Markup (30%)	18,369
Selling price	<u>\$ 79,599</u>

The selling price for Job K:

Total manufacturing cost	\$ 39,370
Markup (30%)	11,811
Selling price	<u>\$ 51,181</u>
Total manufacturing cost assigned to Job F	<u>\$ 61,230</u>
Total manufacturing cost assigned to Job K	<u>39,370</u>
Cost of goods sold	<u>\$100,600</u>

Managerial Accounting Edition 18 by Garrison

306) Essay

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$308,000 + (\$2.10 per machine-hour × 70,000 machine-hours) = \$308,000 + \$147,000 = \$455,000
 Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$455,000 ÷ 70,000 machine-hours = \$6.50 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$6.50 per machine-hour × 100 machine-hours = \$650

Direct materials	\$ 555
Direct labor	2,700
Manufacturing overhead applied	650
Total cost of Job M556	<u>\$3,905</u>
Total cost of Job M556 (a)	<u>\$ 3,905</u>

Unit product cost (a) ÷ (b)	\$ 78.10

307) Essay

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments. Casting

Estimated fixed manufacturing overhead	\$ 18,000
Estimated variable manufacturing overhead (\$1.50 per MH × 4,000 MHs)	6,000

Estimated total manufacturing overhead cost	<u>\$ 24,000</u>
--	------------------

Finishing

Estimated fixed manufacturing overhead	\$ 18,000
Estimated variable manufacturing overhead (\$2.30 per MH × 6,000 MHs)	13,800

Estimated total manufacturing overhead cost	<u>\$ 31,800</u>
--	------------------

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,000 + \$31,800 = \$55,800) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$55,800
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 5.58 per MH

The overhead applied to Job D is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

= \$5.58 per MH × (2,700 MHs + 2,400 MHs)

= \$5.58 per MH × (5,100 MHs)

= \$28,458

Job D's manufacturing cost:

Direct materials	\$ 14,300
Direct labor cost	21,700
Manufacturing overhead applied	28,458
Total manufacturing cost	<u>\$ 64,458</u>

Direct materials	\$ 6,800
Direct labor cost	8,800
Manufacturing overhead applied	27,342
Total manufacturing cost	<u>\$42,942</u>

308) Essay

Managerial Accounting Edition 18 by Garrison

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$130,000 + (\$3.00 per machine-hour × 20,000 machine-hours) = \$130,000 + \$60,000 = \$190,000
 Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$190,000 ÷ 20,000 machine-hours = \$9.50 per machine-hour

321) Essay

Managerial Accounting Edition 18 by Garrison

Department:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$91,200 + (\$2.10 per machine-hour × 16,000 machine-hours)

= \$91,200 + \$33,600 = \$124,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$124,800 ÷ 16,000 machine-hours = \$7.80 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.80 per machine-hour × 50 machine-hours = \$390

Customizing Department:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$99,000 + (\$3.10 per direct labor-hour × 9,000 direct labor-hours)

= \$99,000 + \$27,900 = \$126,900

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$126,900 ÷ 9,000 direct labor-hours = \$14.10 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$14.10 per direct labor-hour × 50 direct labor-hours = \$705

323) Essay

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments. Forming

Estimated fixed manufacturing overhead	\$ 17,500
Estimated variable manufacturing overhead (\$1.50 per MH × 5,000 MHs)	7,500

Estimated total manufacturing overhead cost	<u>\$ 25,000</u>
--	------------------

Customizing

Estimated fixed manufacturing overhead	\$ 17,000
Estimated variable manufacturing overhead (\$3.00 per MH × 5,000 MHs)	15,000

Estimated total manufacturing overhead cost	<u>\$ 32,000</u>
--	------------------

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$25,000 + \$32,000 = \$57,000) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$57,000
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 5.70 per MH

Direct materials	\$ 8,200
Direct labor cost	8,200
Manufacturing overhead applied	42,750
Total manufacturing cost	<u>\$59,150</u>

The selling price for Job L:

Total manufacturing cost	\$ 59,150
Markup (20%)	11,830
Selling price	<u>\$70,980</u>

Forming Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$ 17,500
Estimated variable manufacturing overhead (\$1.50 per MH × 5,000 MHs)	7,500
Estimated total manufacturing overhead cost (a)	<u>\$25,000</u>

Estimated total machine-hours (b)	5,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 5.00 per MH

Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$ 17,000
Estimated variable manufacturing overhead (\$3.00 per MH × 5,000 MHs)	15,000

Managerial Accounting Edition 18 by Garrison

Estimated total manufacturing overhead cost (a)	\$32,000
Estimated total machine-hours (b)	5,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 6.40 per MH

Manufacturing overhead applied to Job L:

Forming (\$5.00 per MH × 3,750 MHs)	\$ 18,750
Customizing (\$6.40 per MH × 3,750 MHs)	24,000
Total manufacturing overhead applied	\$ 42,750

The selling price for Job L would be calculated as follows:

Direct materials	\$ 8,200
Direct labor cost	8,200
Manufacturing overhead applied	42,750
Total manufacturing cost	\$59,150
Markup (20%)	11,830
Selling price	\$70,980

Estimated variable manufacturing overhead (\$5.00 per MH × 4,000 MHs)	20,000
Estimated total manufacturing overhead cost	<u>\$ 41,600</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,600 + \$41,600 = \$66,200) to calculate the plantwide predetermined overhead rate as follows:

Estimated total manufacturing overhead cost	\$66,200
Estimated total machine hours	10,000 MHs

Predetermined overhead rate TBEXAM.COM \$ 6.62 per MH

Estimated fixed manufacturing overhead	\$15,600
Estimated variable manufacturing overhead (\$1.50 per MH × 6,000 MHs)	9,000
Estimated total manufacturing overhead cost (a)	<u>\$24,600</u>
Estimated total machine-hours (b)	6,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 4.10 per MH

Estimated fixed manufacturing overhead	\$21,600
Estimated variable manufacturing overhead (\$5.00 per MH × 4,000 MHs)	20,000
Estimated total manufacturing overhead cost (a)	<u>\$41,600</u>
Estimated total machine-hours (b)	4,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 10.40 per MH

Managerial Accounting Edition 18 by Garrison

Machining (\$4.10 per MH × 4,000 MHs)	\$ 16,400
Finishing (\$10.40 per MH × 500 MHs)	5,200
Total manufacturing overhead applied	<u>\$ 21,600</u>

Machining (\$4.10 per MH × 2,000 MHs)	\$ 8,200
Finishing (\$10.40 per MH × 3,500 MHs)	36,400
Total manufacturing overhead applied	<u>\$44,600</u>

333) Essay

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$ 20,000
Estimated variable manufacturing overhead (\$1.40 per MH × 4,000 MHs)	5,600
Estimated total manufacturing overhead cost	<u>\$ 25,600</u>

Finishing

Estimated fixed manufacturing overhead	\$ 2,100
Estimated variable manufacturing overhead (\$2.80 per MH × 1,000 MHs)	2,800
Estimated total manufacturing overhead cost	<u>\$ 4,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$25,600 + \$4,900 = \$30,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$30,500
Estimated total machine hours	5,000 MHs
Predetermined overhead rate	\$ 6.10 per MH

Estimated fixed manufacturing overhead	\$20,000
Estimated variable manufacturing overhead (\$1.40 per MH × 4,000 MHs)	5,600
Estimated total manufacturing overhead cost (a)	<u>\$25,600</u>

Estimated total machine-hours (b)	4,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 6.40 per MH

Estimated fixed manufacturing overhead	\$2,100
Estimated variable manufacturing overhead (\$2.80 per MH × 1,000 MHs)	2,800
Estimated total manufacturing overhead cost (a)	<u>\$4,900</u>

Estimated total machine-hours (b)	1,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 4.90 per MH

Machining (\$6.40 per MH × 2,700 MHs)	\$ 17,280
Finishing (\$4.90 per MH × 400 MHs)	<u>1,960</u>

Managerial Accounting Edition 18 by Garrison

Total manufacturing overhead applied	\$ 19,240
Machining (\$6.40 per MH × 1,300 MHs)	\$ 8,320
Finishing (\$4.90 per MH × 600 MHs)	2,940
Total manufacturing overhead applied	\$11,260

334) Essay

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

$$= \$76,300 + (\$3.10 \text{ per direct labor-hour} \times 7,000 \text{ direct labor-hours})$$

$$= \$76,300 + \$21,700 = \$98,000$$

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

$$= \$100,800 + (\$1.70 \text{ per machine-hour} \times 16,000 \text{ machine-hours})$$

$$= \$100,800 + \$27,200 = \$128,000$$

Forming Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = $\$128,000 \div 16,000 \text{ machine-hours} = \$8.00 \text{ per machine-hour}$

Forming Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = $\$8.00 \text{ per machine-hour} \times 50 \text{ machine-hours} = \400

Assembly Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = $\$98,000 \div 7,000 \text{ direct labor-hours} = \$14.00 \text{ per direct labor-hour}$

Assembly Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = $\$14.00 \text{ per direct labor-hour} \times 40 \text{ direct labor-hours} = \560

Overhead applied to Job X560

Forming Department	\$ 400
Assembly Department	560
Total	\$ 960

335) Essay

Managerial Accounting Edition 18 by Garrison

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$ 5,100
Estimated variable manufacturing overhead (\$1.50 per MH × 1,000 MHs)	1,500
Estimated total manufacturing overhead cost	<u>\$ 6,600</u>

Customizing

Estimated fixed manufacturing overhead	\$ 23,400
Estimated variable manufacturing overhead (\$2.50 per MH × 9,000 MHs)	22,500
Estimated total manufacturing overhead cost	<u>\$ 45,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$6,600 + \$45,900 = \$52,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$52,500
Estimated total machine hours	10,000 MHs
Predetermined overhead rate	\$ 5.25 per MH

Estimated fixed manufacturing overhead	\$5,100
Estimated variable manufacturing overhead (\$1.50 per MH × 1,000 MHs)	1,500
Estimated total manufacturing overhead cost (a)	<u>\$6,600</u>

Estimated total machine-hours (b)	1,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 6.60 per MH

Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$23,400
Estimated variable manufacturing overhead (\$2.50 per MH × 9,000 MHs)	22,500
Estimated total manufacturing overhead cost (a)	<u>\$45,900</u>

Estimated total machine-hours (b)	9,000 MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$ 5.10 per MH

Manufacturing overhead applied to Job D:

Molding (\$6.60 per MH × 700 MHs)	\$ 4,620
Customizing (\$5.10 per MH × 3,600 MHs)	18,360
Total manufacturing overhead applied	<u>\$22,980</u>

Managerial Accounting Edition 18 by Garrison

Molding (\$6.60 per MH × 300 MHs)	\$ 1,980
Customizing (\$5.10 per MH × 5,400 MHs)	27,540
Total manufacturing overhead applied	\$29,520

336) Essay

- n. Casting Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department) = \$124,100 + (\$2.30 per machine-hour × 17,000 machine-hours) = \$124,100 + \$39,100 = \$163,200
- o. Casting Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$163,200 ÷ 17,000 machine-hours = \$9.60 per machine-hour
- p. Casting Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.60 per machine-hour × 80 machine-hours = \$768

337) Essay

- q. Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department) = \$57,600 + (\$4.00 per direct labor-hour × 6,000 direct labor-hours) = \$57,600 + \$24,000 = \$81,600
- r. Finishing Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$81,600 ÷ 6,000 direct labor-hours = \$13.60 per direct labor-hour
- s. Finishing Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.60 per direct labor-hour × 60 direct labor-hours = \$816

338) Essay

Managerial Accounting Edition 18 by Garrison

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department) = \$119,700 + (\$2.00 per machine-hour × 19,000 machine-hours)

$$= \$119,700 + \$38,000 = \$157,700$$

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

$$= \$67,200 + (\$4.20 \text{ per direct labor-hour} \times 8,000 \text{ direct labor-hours})$$

$$= \$67,200 + \$33,600 = \$100,800$$

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$100,800 ÷ 8,000 direct labor-hours = \$12.60 per direct labor-hour

Forming Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$157,700 ÷ 19,000 machine-hours = \$8.30 per machine-hour

Forming Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.30 per machine-hour × 50 machine-hours = \$415

Customizing Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.60 per direct labor-hour × 50 direct labor-hours = \$630

CORRECT ANSWERS ARE LOCATED IN THE 2ND HALF OF THIS DOC.
MULTIPLE CHOICE - Choose the one alternative that best completes the statement or answers the question.

- 1) Feauto Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, I63E and E76I, about which it has provided the following data:

	I63E	E76I
Direct materials per unit	\$ 21.90	\$ 65.70
Direct labor per unit	\$ 11.10	\$ 33.30
Direct labor-hours per unit	0.50	1.50
Annual production (units)	48,000	16,000

The company's estimated total manufacturing overhead for the year is \$1,963,200 and the company's estimated total direct labor-hours for the year is 48,000.

The company is considering using a form of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost
Assembling products (direct labor-hours)	\$ 960,000
Preparing batches (batches)	228,800
Product support (product variations)	774,400
Total	\$ 1,963,200

	Expected Activity		
	I63E	E76I	Total
Direct labor-hours	24,000	24,000	48,000
Batches	1,250	720	1,970
Product variations	2,500	1,440	3,940

The manufacturing overhead that would be applied to a unit of product I63E under the company's traditional costing system is closest to:

- A) \$40.90
- B) \$61.35
- C) \$40.90
- D) \$20.45

Managerial Accounting Edition 18 by Garrison

- 2) Feauto Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, I63E and E76I, about which it has provided the following data:

	I63E	E76I
Direct materials per unit	\$ 19.90	\$ 54.40
Direct labor per unit	\$ 12.00	\$ 31.50
Direct labor-hours per unit	0.80	2.10
Annual production (units)	30,000	10,000

The company's estimated total manufacturing overhead for the year is \$2,063,250 and the company's estimated total direct labor-hours for the year is 45,000.

The company is considering using a form of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Assembling products (direct labor-hours)	\$ 720,000			
Preparing batches (batches)	263,250			
Product support (product variations)	1,080,000			
Total	<u>\$ 2,063,250</u>			
		Expected Activity		
		I63E	E76I	Total
Direct labor-hours		24,000	21,000	45,000
Batches		1,080	675	1,755
Product variations		2,115	1,485	3,600

The manufacturing overhead that would be applied to a unit of product I63E under the company's traditional costing system is closest to:

- A) \$12.80
- B) \$39.35
- C) \$76.03
- D) \$36.68

Managerial Accounting Edition 18 by Garrison

- 3) Feauto Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, I63E and E76I, about which it has provided the following data:

	I63E	E76I
Direct materials per unit	\$ 19.10	\$ 57.30
Direct labor per unit	\$ 15.50	\$ 46.50
Direct labor-hours per unit	0.70	2.10
Annual production (units)	60,000	20,000

The company's estimated total manufacturing overhead for the year is \$2,886,000 and the company's estimated total direct labor-hours for the year is 84,000.

The company is considering using a form of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Assembling products (direct labor-hours)	\$ 1,680,000			
Preparing batches (batches)	234,000			
Product support (product variations)	972,000			
Total	\$ 2,886,000			
		Expected Activity		
		I63E	E76I	Total
Direct labor-hours		42,000	42,000	84,000
Batches		1,200	700	1,900
Product variations		2,400	1,400	3,800

The manufacturing overhead that would be applied to a unit of product E76I under the activity-based costing system is closest to:

- A) \$64.22
- B) \$34.36
- C) \$144.30
- D) \$30.58

Managerial Accounting Edition 18 by Garrison

- 4) Feauto Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, I63E and E76I, about which it has provided the following data:

	I63E	E76I
Direct materials per unit	\$ 19.90	\$ 54.40
Direct labor per unit	\$ 12.00	\$ 31.50
Direct labor-hours per unit	0.80	2.10
Annual production (units)	30,000	10,000

The company's estimated total manufacturing overhead for the year is \$2,063,250 and the company's estimated total direct labor-hours for the year is 45,000.

The company is considering using a form of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Assembling products (direct labor-hours)	\$ 720,000			
Preparing batches (batches)	263,250			
Product support (product variations)	1,080,000			
Total	<u>\$ 2,063,250</u>			
		Expected Activity		
		I63E	E76I	Total
Direct labor-hours		24,000	21,000	45,000
Batches		1,080	675	1,755
Product variations		2,115	1,485	3,600

The manufacturing overhead that would be applied to a unit of product E76I under the activity-based costing system is closest to:

- A) \$88.28
- B) \$96.29
- C) \$184.57
- D) \$10.13

Managerial Accounting Edition 18 by Garrison

- 5) Coudriet Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, P93S and N40S, about which it has provided the following data:

	P93S	N40S
Direct materials per unit	\$ 21.90	\$ 54.80
Direct labor per unit	\$ 8.80	\$ 13.20
Direct labor-hours per unit	0.80	1.20
Annual production (units)	35,000	15,000

The company's estimated total manufacturing overhead for the year is \$2,172,580 and the company's estimated total direct labor-hours for the year is 46,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Direct labor support (direct labor-hours)	\$ 552,000			
Setting up machines (setups)	419,980			
Part administration (part types)	1,200,600			
Total	\$ 2,172,580			
		Expected Activity		
		P93S	N40S	Total
Direct labor-hours		28,000	18,000	46,000
Setups		2,162	1,656	3,818
Part types		1,886	2,116	4,002

The unit product cost of product P93S under the company's traditional costing system is closest to:

- A) \$68.48
- B) \$63.26
- C) \$30.70
- D) \$40.30

Managerial Accounting Edition 18 by Garrison

- 6) Coudriet Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, P93S and N40S, about which it has provided the following data:

	P93S	N40S
Direct materials per unit	\$ 21.90	\$ 54.80
Direct labor per unit	\$ 8.80	\$ 13.20
Direct labor-hours per unit	0.80	1.20
Annual production (units)	35,000	15,000

The company's estimated total manufacturing overhead for the year is \$2,172,580 and the company's estimated total direct labor-hours for the year is 46,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Direct labor support (direct labor-hours)	\$ 552,000			
Setting up machines (setups)	419,980			
Part administration (part types)	1,200,600			
Total	\$ 2,172,580			
		Expected Activity		
		P93S	N40S	Total
Direct labor-hours		28,000	18,000	46,000
Setups		2,162	1,656	3,818
Part types		1,886	2,116	4,002

The unit product cost of product N40S under the activity-based costing system is closest to:

- A) \$68.00
- B) \$68.86
- C) \$124.68
- D) \$136.86

Managerial Accounting Edition 18 by Garrison

- 7) Poma Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, R78S and N32Y, about which it has provided the following data:

	R78S	N32Y
Direct materials per unit	\$ 27.20	\$ 54.70
Direct labor per unit	\$ 8.80	\$ 22.00
Direct labor-hours per unit	0.4	1.0
Annual production (units)	35,000	10,000

The company's estimated total manufacturing overhead for the year is \$1,427,040 and the company's estimated total direct labor-hours for the year is 24,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Assembling products (direct labor-hours)	\$ 672,000			
Preparing batches (batches)	255,840			
Product support (product variations)	499,200			
Total	\$ 1,427,040			
		Expected Activity		
		R78S	N32Y	Total
Direct labor-hours		14,000	10,000	24,000
Batches		816	1,152	1,968
Product variations		840	408	1,248

The unit product cost of product R78S under the company's traditional costing system is closest to:

- A) \$36.00
- B) \$59.83
- C) \$47.20
- D) \$59.78

Managerial Accounting Edition 18 by Garrison

- 8) Poma Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, R78S and N32Y, about which it has provided the following data:

	R78S	N32Y
Direct materials per unit	\$ 27.20	\$ 54.70
Direct labor per unit	\$ 8.80	\$ 22.00
Direct labor-hours per unit	0.4	1.0
Annual production (units)	35,000	10,000

The company's estimated total manufacturing overhead for the year is \$1,427,040 and the company's estimated total direct labor-hours for the year is 24,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Assembling products (direct labor-hours)	\$ 672,000			
Preparing batches (batches)	255,840			
Product support (product variations)	499,200			
Total	\$ 1,427,040			
		Expected Activity		
		R78S	N32Y	Total
Direct labor-hours		14,000	10,000	24,000
Batches		816	1,152	1,968
Product variations		840	408	1,248

The unit product cost of product N32Y under the activity-based costing system is closest to:

- A) \$136.00
- B) \$76.70
- C) \$59.30
- D) \$136.16

Managerial Accounting Edition 18 by Garrison

- 9) Adelberg Corporation makes two products: Product A and Product B. Annual production and sales are 500 units of Product A and 1,000 units of Product B. The company has traditionally used direct labor-hours as the basis for applying all manufacturing overhead to products. Product A requires 0.4 direct labor-hours per unit and Product B requires 0.2 direct labor-hours per unit. The total estimated overhead for next period is \$68,756. The company is considering switching to an activity-based costing system for the purpose of computing unit product costs for external reports. The new activity-based costing system would have three overhead activity cost pools--Activity 1, Activity 2, and General Factory--with estimated overhead costs and expected activity as follows:

Activity Cost Pool	Estimated Overhead Costs	Expected Activity		
		Product A	Product B	Total
Activity 1	\$ 31,031	1,000	300	1,300
Activity 2	22,249	1,600	300	1,900
General Factory	15,476	200	200	400
Total	<u>\$ 68,756</u>			

(Note: The General Factory activity cost pool's costs are allocated on the basis of direct labor-hours.)

The predetermined overhead rate under the traditional costing system is closest to:

- A) \$11.71
- B) \$38.69
- C) \$171.89
- D) \$23.87

Managerial Accounting Edition 18 by Garrison

- 14) Njombe Corporation manufactures a variety of products. In the past, Njombe has been using a traditional costing system in which the predetermined overhead rate was 150% of direct labor cost. Selling prices had been set by multiplying total product cost by 200%. Sensing that this system was distorting costs and selling prices, Njombe has decided to switch to an activity-based costing system for manufacturing overhead costs that uses the three activity cost pools listed below. Selling prices are still to be set at 200% of unit product cost under the new system. Information on these cost pools for next year are as follows:

Activity Cost Pool	Activity Measure	Estimated Activity	Estimated Overhead Cost
Machine Setups	Number of setups	400	\$ 150,000
Quality Control	Number of inspections	1,500	\$ 180,000
Other Overhead	Machine hours	30,000	\$ 480,000

Information (on a per unit basis) related to three popular products at Njombe are as follows:

	Model number 19	Model number 36	Model number 58
Direct material cost	\$ 400	\$ 540	\$ 310
Direct labor cost	\$ 810	\$ 600	\$ 220
Number of setups	2	3	1
Number of inspections	1	3	1
Number of machine hours	4	8	10

Under the traditional costing system, what would be the selling price of one unit of Model number 36?

- A) \$2,536
- B) \$2,712
- C) \$4,080
- D) \$5,506

Managerial Accounting Edition 18 by Garrison

- 15) Njombe Corporation manufactures a variety of products. In the past, Njombe has been using a traditional costing system in which the predetermined overhead rate was 150% of direct labor cost. Selling prices had been set by multiplying total product cost by 200%. Sensing that this system was distorting costs and selling prices, Njombe has decided to switch to an activity-based costing system for manufacturing overhead costs that uses the three activity cost pools listed below. Selling prices are still to be set at 200% of unit product cost under the new system. Information on these cost pools for next year are as follows:

Activity Cost Pool	Activity Measure	Estimated Activity	Estimated Overhead Cost
Machine Setups	Number of setups	400	\$ 150,000
Quality Control	Number of inspections	1,500	\$ 180,000
Other Overhead	Machine hours	30,000	\$ 480,000

Information (on a per unit basis) related to three popular products at Njombe are as follows:

	Model number 19	Model number 36	Model number 58
Direct material cost	\$ 400	\$ 540	\$ 310
Direct labor cost	\$ 810	\$ 600	\$ 220
Number of setups	2	3	1
Number of inspections	1	3	1
Number of machine hours	4	8	10

Under the activity-based costing system, what would be the selling price of one unit of Model number 36?

- A) \$2,536
- B) \$2,712
- C) \$4,080
- D) \$5,506

Managerial Accounting Edition 18 by Garrison

- 16) Njombe Corporation manufactures a variety of products. In the past, Njombe has been using a traditional costing system in which the predetermined overhead rate was 150% of direct labor cost. Selling prices had been set by multiplying total product cost by 200%. Sensing that this system was distorting costs and selling prices, Njombe has decided to switch to an activity-based costing system for manufacturing overhead costs that uses the three activity cost pools listed below. Selling prices are still to be set at 200% of unit product cost under the new system. Information on these cost pools for next year are as follows:

Activity Cost Pool	Activity Measure	Estimated Activity	Estimated Overhead Cost
Machine Setups	Number of setups	400	\$ 150,000
Quality Control	Number of inspections	1,500	\$ 180,000
Other Overhead	Machine hours	30,000	\$ 480,000

Information (on a per unit basis) related to three popular products at Njombe are as follows:

	Model number 19	Model number 36	Model number 58
Direct material cost	\$ 400	\$ 540	\$ 310
Direct labor cost	\$ 810	\$ 600	\$ 220
Number of setups	2	3	1
Number of inspections	1	3	1
Number of machine hours	4	8	10

In comparing the traditional system with the activity-based costing system, which of Njombe's Models had higher unit product costs under the traditional system?

- A) number 19
- B) number 58
- C) number 19 and number 58
- D) number 36 and number 58

Managerial Accounting Edition 18 by Garrison

- 17) Look Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, N06D and M09K, about which it has provided the following data:

	N06D	M09K
Direct materials per unit	\$ 26.80	\$ 61.30
Direct labor per unit	\$ 10.00	\$ 33.00
Direct labor-hours per unit	0.20	1.00
Annual production (units)	49,400	16,100

The company's estimated total manufacturing overhead for the year is \$1,294,164 and the company's estimated total direct labor-hours for the year is 25,980.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Supporting direct labor (direct labor-hours)	\$ 441,660			
Setting up machines (setups)	376,740			
Parts administration (part types)	475,764			
Total	<u>\$ 1,294,164</u>			
		Expected Activity		
		N06D	M09K	Total
Direct labor-hours		9,880	16,100	25,980
Setups		1,720	971	2,691
Part types		635	332	967

The manufacturing overhead that would be applied to a unit of product N06D under the company's traditional costing system is closest to:

Note: Round your intermediate calculations to 2 decimal places.

- A) \$9.96
- B) \$4.95
- C) \$21.49
- D) \$13.48

Managerial Accounting Edition 18 by Garrison

- 18) Look Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, N06D and M09K, about which it has provided the following data:

	N06D	M09K
Direct materials per unit	\$ 17.70	\$ 62.50
Direct labor per unit	\$ 5.00	\$ 16.00
Direct labor-hours per unit	0.50	1.60
Annual production (units)	40,000	15,000

The company's estimated total manufacturing overhead for the year is \$2,532,200 and the company's estimated total direct labor-hours for the year is 44,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost	Expected Activity		
Supporting direct labor (direct labor-hours)	\$ 880,000			
Setting up machines (setups)	376,200			
Parts administration (part types)	1,276,000			
Total	\$ 2,532,200			
	N06D	M09K	Total	
Direct labor-hours	20,000	24,000	44,000	
Setups	1,408	1,100	2,508	
Part types	1,540	1,012	2,552	

The manufacturing overhead that would be applied to a unit of product N06D under the company's traditional costing system is closest to:

- A) \$28.78
- B) \$10.00
- C) \$63.31
- D) \$34.53

Managerial Accounting Edition 18 by Garrison

- 19) Look Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, N06D and M09K, about which it has provided the following data:

	N06D	M09K
Direct materials per unit	\$ 31.20	\$ 68.30
Direct labor per unit	\$ 8.00	\$ 32.00
Direct labor-hours per unit	0.20	1.00
Annual production (units)	50,900	18,600

The company's estimated total manufacturing overhead for the year is \$1,454,596 and the company's estimated total direct labor-hours for the year is 28,780.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Supporting direct labor (direct labor-hours)	\$ 518,040			
Setting up machines (setups)	488,176			
Parts administration (part types)	448,380			
Total	\$ 1,454,596			
		Expected Activity		
		N06D	M09K	Total
Direct labor-hours		10,180	18,600	28,780
Setups		1,340	1,007	2,347
Part types		683	271	954

The manufacturing overhead that would be applied to a unit of product M09K under the activity-based costing system is closest to:

- A) \$36.11
- B) \$46.66
- C) \$77.17
- D) \$13.71

Managerial Accounting Edition 18 by Garrison

- 20) Look Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, N06D and M09K, about which it has provided the following data:

	N06D	M09K
Direct materials per unit	\$ 17.70	\$ 62.50
Direct labor per unit	\$ 5.00	\$ 16.00
Direct labor-hours per unit	0.50	1.60
Annual production (units)	40,000	15,000

The company's estimated total manufacturing overhead for the year is \$2,532,200 and the company's estimated total direct labor-hours for the year is 44,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost			
Supporting direct labor (direct labor-hours)	\$ 880,000			
Setting up machines (setups)	376,200			
Parts administration (part types)	1,276,000			
Total	\$ 2,532,200			
		Expected Activity		
		N06D	M09K	Total
Direct labor-hours		20,000	24,000	44,000
Setups		1,408	1,100	2,508
Part types		1,540	1,012	2,552

The manufacturing overhead that would be applied to a unit of product M09K under the activity-based costing system is closest to:

- A) \$76.73
- B) \$92.08
- C) \$11.00
- D) \$168.81

Managerial Accounting Edition 18 by Garrison

ESSAY. Write your answer in the space provided or on a separate sheet of paper.

- 21) Bullie Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, D31X and U75X, about which it has provided the following data:

	D31X	U75X
Direct materials per unit	\$ 29.20	\$ 47.40
Direct labor per unit	\$ 1.10	\$ 23.10
Direct labor-hours per unit	0.10	2.10
Annual production (units)	35,000	15,000

The company's estimated total manufacturing overhead for the year is \$1,147,650 and the company's estimated total direct labor-hours for the year is 35,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost		
Assembling products (direct labor-hours)	\$ 140,000		
Preparing batches (batches)	241,150		
Axial milling (machine-hours)	766,500		
Total	<u>\$ 1,147,650</u>		
	D31X	U75X	Total
Assembling products	3,500	31,500	35,000
Preparing batches	560	1,295	1,855
Axial milling	1,540	1,015	2,555

Required:

- Determine the manufacturing overhead cost per unit of each of the company's two products under the traditional costing system.
- Determine the manufacturing overhead cost per unit of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

- 22) Torri Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, B40W and C63J, about which it has provided the following data:

	B40W	C63J
Direct materials per unit	\$ 34.90	\$ 63.70
Direct labor per unit	\$ 20.80	\$ 62.40
Direct labor-hours per unit	0.80	2.40
Annual production (units)	35,000	15,000

The company's estimated total manufacturing overhead for the year is \$2,656,000 and the company's estimated total direct labor-hours for the year is 64,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost
Assembling products (direct labor-hours)	\$ 1,216,000
Preparing batches (batches)	480,000
Milling (machine-hours)	960,000
Total	\$ 2,656,000

Activities	B40W	C63J	Total
Assembling products	28,000	36,000	64,000
Preparing batches	2,304	2,496	4,800
Milling	1,088	2,112	3,200

Required:

- Determine the unit product cost of each of the company's two products under the traditional costing system.
- Determine the unit product cost of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

- 23) Cabigas Corporation manufactures two products, Product C and Product D. The company estimated it would incur \$167,140 in manufacturing overhead costs during the current period. Overhead currently is applied to the products on the basis of direct labor-hours. Data concerning the current period's operations appear below:

	Product C	Product D
Estimated volume	2,000 units	2,700 units
Direct labor-hours per unit	2.00 hours	0.80 hour
Direct materials cost per unit	\$ 21.50	\$ 24.10
Direct labor cost per unit	\$ 24.00	\$ 9.60

Required:

- Compute the predetermined overhead rate under the current method, and determine the unit product cost of each product for the current year.
- The company is considering using an activity-based costing system to compute unit product costs for external financial reports instead of its traditional system based on direct labor-hours. The activity-based costing system would use three activity cost pools.

Data relating to these activities for the current period are given below:

Activity Cost Pool	Estimated Overhead Costs	Expected Activity		
		Product C	Product D	Total
Machine setups	\$ 13,630	130	160	290
Purchase orders	85,750	750	1,000	1,750
General factory	67,760	4,000	2,160	6,160
	<u>\$ 167,140</u>			

Determine the unit product cost of each product for the current period using the activity-based costing approach. General factory overhead is allocated based on direct labor-hours.

Managerial Accounting Edition 18 by Garrison

- 24) Welk Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, H16Z and P25P, about which it has provided the following data:

	H16Z	P25P
Direct materials per unit	\$ 10.20	\$ 50.50
Direct labor per unit	\$ 8.40	\$ 25.20
Direct labor-hours per unit	0.40	1.20
Annual production (units)	30,000	10,000

The company's estimated total manufacturing overhead for the year is \$1,464,480 and the company's estimated total direct labor-hours for the year is 24,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost		
Supporting direct labor (direct labor-hours)	\$ 552,000		
Setting up machines (setups)	132,480		
Parts administration (part types)	780,000		
Total	\$ 1,464,480		
	H16Z	P25P	Total
Supporting direct labor	12,000	12,000	24,000
Setting up machines	864	240	1,104
Parts administration	600	960	1,560

Required:

- Determine the manufacturing overhead cost per unit of each of the company's two products under the traditional costing system.
- Determine the manufacturing overhead cost per unit of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

25) Werger Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, W82R and L48S, about which it has provided the following data:

	W82R	L48S
Direct materials per unit	\$ 21.90	\$ 57.40
Direct labor per unit	\$ 18.80	\$ 64.60
Direct labor-hours per unit	0.70	2.40
Annual production (units)	36,200	24,900

The company's estimated total manufacturing overhead for the year is \$2,663,222 and the company's estimated total direct labor-hours for the year is 85,100.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost
Supporting direct labor (direct labor-hours)	\$ 595,700
Setting up machines (setups)	865,062
Parts administration (part types)	1,202,460
Total	\$ 2,663,222

Activities	W82R	L48S	Total
Supporting direct labor	25,340	59,760	85,100
Setting up machines	839	3,530	4,369
Parts administration	1,750	1,190	2,940

Required:

- Determine the unit product cost of each of the company's two products under the traditional costing system.
- Determine the unit product cost of each of the company's two products under activity-based costing system.

Note: For all requirements, round your intermediate calculations and final answers to 2 decimal places.

Managerial Accounting Edition 18 by Garrison

- 26) Werger Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, W82R and L48S, about which it has provided the following data:

	W82R	L48S
Direct materials per unit	\$ 11.50	\$ 62.90
Direct labor per unit	\$ 2.00	\$ 13.00
Direct labor-hours per unit	0.20	1.30
Annual production (units)	45,000	10,000

The company's estimated total manufacturing overhead for the year is \$1,521,960 and the company's estimated total direct labor-hours for the year is 22,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost
Supporting direct labor (direct labor-hours)	\$ 352,000
Setting up machines (setups)	201,960
Parts administration (part types)	968,000
Total	\$ 1,521,960

Activities	W82R	L48S	Total
Supporting direct labor	9,000	13,000	22,000
Setting up machines	814	374	1,188
Parts administration	924	1,012	1,936

Required:

- Determine the unit product cost of each of the company's two products under the traditional costing system.
- Determine the unit product cost of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

- 27) Bullie Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, D31X and U75X, about which it has provided the following data:

	D31X	U75X
Direct materials per unit	\$ 29.20	\$ 47.40
Direct labor per unit	\$ 1.10	\$ 23.10
Direct labor-hours per unit	0.10	2.10
Annual production (units)	35,000	15,000

The company's estimated total manufacturing overhead for the year is \$1,147,650 and the company's estimated total direct labor-hours for the year is 35,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost		
Assembling products (direct labor-hours)	\$ 140,000		
Preparing batches (batches)	241,150		
Axial milling (machine-hours)	766,500		
Total	\$ 1,147,650		
	D31X	U75X	Total
Assembling products	3,500	31,500	35,000
Preparing batches	560	1,295	1,855
Axial milling	1,540	1,015	2,555

Required:

- Determine the manufacturing overhead cost per unit of each of the company's two products under the traditional costing system.
- Determine the manufacturing overhead cost per unit of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

28) Torri Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, B40W and C63J, about which it has provided the following data:

	B40W	C63J
Direct materials per unit	\$ 34.90	\$ 63.70
Direct labor per unit	\$ 20.80	\$ 62.40
Direct labor-hours per unit	0.80	2.40
Annual production (units)	35,000	15,000

The company's estimated total manufacturing overhead for the year is \$2,656,000 and the company's estimated total direct labor-hours for the year is 64,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost
Assembling products (direct labor-hours)	\$ 1,216,000
Preparing batches (batches)	480,000
Milling (machine-hours)	960,000
Total	\$ 2,656,000

Activities	B40W	C63J	Total
Assembling products	28,000	36,000	64,000
Preparing batches	2,304	2,496	4,800
Milling	1,088	2,112	3,200

Required:

- Determine the unit product cost of each of the company's two products under the traditional costing system.
- Determine the unit product cost of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

- 29) Cabigas Corporation manufactures two products, Product C and Product D. The company estimated it would incur \$167,140 in manufacturing overhead costs during the current period. Overhead currently is applied to the products on the basis of direct labor-hours. Data concerning the current period's operations appear below:

	Product C	Product D
Estimated volume	2,000 units	2,700 units
Direct labor-hours per unit	2.00 hours	0.80 hour
Direct materials cost per unit	\$ 21.50	\$ 24.10
Direct labor cost per unit	\$ 24.00	\$ 9.60

Required:

- Compute the predetermined overhead rate under the current method, and determine the unit product cost of each product for the current year.
- The company is considering using an activity-based costing system to compute unit product costs for external financial reports instead of its traditional system based on direct labor-hours. The activity-based costing system would use three activity cost pools.

Data relating to these activities for the current period are given below:

Activity Cost Pool	Estimated Overhead Costs	Expected Activity		
		Product C	Product D	Total
Machine setups	\$ 13,630	130	160	290
Purchase orders	85,750	750	1,000	1,750
General factory	67,760	4,000	2,160	6,160
	<u>\$ 167,140</u>			

Determine the unit product cost of each product for the current period using the activity-based costing approach. General factory overhead is allocated based on direct labor-hours.

Managerial Accounting Edition 18 by Garrison

- 30) Welk Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, H16Z and P25P, about which it has provided the following data:

	H16Z	P25P
Direct materials per unit	\$ 10.20	\$ 50.50
Direct labor per unit	\$ 8.40	\$ 25.20
Direct labor-hours per unit	0.40	1.20
Annual production (units)	30,000	10,000

The company's estimated total manufacturing overhead for the year is \$1,464,480 and the company's estimated total direct labor-hours for the year is 24,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost		
Supporting direct labor (direct labor-hours)	\$ 552,000		
Setting up machines (setups)	132,480		
Parts administration (part types)	780,000		
Total	\$ 1,464,480		
	H16Z	P25P	Total
Supporting direct labor	12,000	12,000	24,000
Setting up machines	864	240	1,104
Parts administration	600	960	1,560

Required:

- Determine the manufacturing overhead cost per unit of each of the company's two products under the traditional costing system.
- Determine the manufacturing overhead cost per unit of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

- 31) Werger Manufacturing Corporation has a traditional costing system in which it applies manufacturing overhead to its products using a predetermined overhead rate based on direct labor-hours (DLHs). The company has two products, W82R and L48S, about which it has provided the following data:

	W82R	L48S
Direct materials per unit	\$ 11.50	\$ 62.90
Direct labor per unit	\$ 2.00	\$ 13.00
Direct labor-hours per unit	0.20	1.30
Annual production (units)	45,000	10,000

The company's estimated total manufacturing overhead for the year is \$1,521,960 and the company's estimated total direct labor-hours for the year is 22,000.

The company is considering using a variation of activity-based costing to determine its unit product costs for external reports. Data for this proposed activity-based costing system appear below:

Activities and Activity Measures	Estimated Overhead Cost
Supporting direct labor (direct labor-hours)	\$ 352,000
Setting up machines (setups)	201,960
Parts administration (part types)	968,000
Total	\$ 1,521,960

Activities	W82R	L48S	Total
Supporting direct labor	9,000	13,000	22,000
Setting up machines	814	374	1,188
Parts administration	924	1,012	1,936

Required:

- Determine the unit product cost of each of the company's two products under the traditional costing system.
- Determine the unit product cost of each of the company's two products under activity-based costing system.

Managerial Accounting Edition 18 by Garrison

Answer Key

Test name: Chapter 02A

1) D

Product I63E 48,000 units × 0.50 direct labor-hours per unit	24,000
--	--------

Product E76I 16,000 units × 1.50 direct labor-hours per unit	24,000
--	--------

Total direct labor-hours	<u>48,000</u>
--------------------------	---------------

Predetermined overhead rate = \$1,963,200 ÷ 48,000 direct labor-hours = \$40.90 per direct labor-hour

Overhead applied to a unit of product T37C = \$40.90 per direct labor-hours × 0.50 direct labor-hours per unit = \$20.45 per unit

2) D

Product I63E 30,000 units × 0.80 direct labor-hours per unit	24,000
--	--------

Product E76I 10,000 units × 2.10 direct labor-hours per unit	21,000
--	--------

Total direct labor-hours	<u>45,000</u>
--------------------------	---------------

Predetermined overhead rate = \$2,063,250 ÷ 45,000 direct labor-hours = \$45.85 per direct labor-hour

Overhead applied to a unit of product T37C = \$45.85 per direct labor-hours × 0.80 direct labor-hours per unit = \$36.68 per unit

3) A

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Assembling products	\$ 1,680,000	84,000 direct labor-hours	\$ 20.00 per direct labor-hour
Preparing batches	\$ 234,000	1,900 batches	\$ 123.16 per batch
Product support	\$ 972,000	3,800 variations	\$ 255.79 per variation

The overhead cost charged to Product E76I is:

	Activity Rate	Activity	ABC Cost
Assembling products	\$ 20.00 per direct labor-hour	42,000 direct labor-hours	\$ 840,000.00
Preparing batches	\$ 123.16 per batch	700 batches	86,210.53
Product support	\$ 255.79 per variation	1,400 variations	358,105.26
Total			<u>\$ 1,284,315.79</u>

Manufacturing overhead applied to a unit of product E76I = $\$1,284,315.79 \div 20,000 \text{ units} = \64.22 per unit

TBEXAM.COM

4) A

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Assembling products	\$ 720,000	45,000 direct labor-hours	\$ 16 per direct labor-hour
Preparing batches	\$ 263,250	1,755 batches	\$ per batch
Product support	\$ 1,080,000	3,600 variations	\$ per 300 variation

The overhead cost charged to Product E76I is:

	Activity Rate	Activity	ABC Cost
Assembling products	\$ 16 per direct labor-hour	21,000 direct labor-hours	\$ 336,000
Preparing batches	\$ per batch 150	675 batches	101,250
Product support	\$ per variation 300	1,485 variations	445,500
Total			<u>\$ 882,750</u>

Manufacturing overhead applied to a unit of product E76I = $\$882,750 \div 10,000$ units = \$88.28 per unit

TBEXAM.COM

5) A

Direct labor-hour calculation:

Product P93S	35,000 units × 0.80 direct labor-hours per unit	28,000
Product R28K	15,000 units × 1.20 direct labor-hours per unit	18,000
Total direct labor-hours		<u><u>46,000</u></u>

Predetermined overhead rate = $\$2,172,580 \div 46,000$ direct labor-hours = \$47.23 per direct labor-hour

Overhead per unit of product P93S = \$47.23 per direct labor-hour × 0.80 direct labor-hours per unit = \$37.78 per unit

Direct materials	\$ 21.90
Direct labor	8.80
Overhead	37.78
Unit product cost	<u><u>\$ 68.48</u></u>

6) D

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Direct labor support	\$ 552,000	46,000 direct labor-hours	\$ 12 per direct labor-hour
Setting up machines	\$ 419,980	3,818 per setup	\$ per setup 110
Part administration	\$ 1,200,600	4,002 per part type	\$ per part 300 type

The overhead cost charged to Product N40S is:

	Activity Rate	Activity	ABC Cost
Direct labor support	\$ 12 per direct labor-hour	18,000 direct labor-hours	\$ 216,000
Setting up machines	\$ per setup 110	1,656 per setup	182,160
Part administration	\$ per part 300 type	2,116 per part type	634,800
Total			<u>\$</u> <u>1,032,960</u>

TBEXAM.COM

Overhead cost per unit of Product N40S = \$1,032,960 ÷ 15,000 units = \$68.86 per unit

Direct materials	\$ 54.80
Direct labor	13.20
Overhead	68.86
Unit product cost	<u>\$ 136.86</u>

7) D

Managerial Accounting Edition 18 by Garrison

Direct labor-hour calculation:

Product R78S 35,000 units × 0.4 direct labor-hours per unit	14,000
Product N32Y 10,000 units × 1.0 direct labor-hours per unit	10,000
Total direct labor-hours	<u>24,000</u>

Predetermined overhead rate = \$1,427,040 ÷ 24,000 direct labor-hours = \$59.46 per direct labor-hour

Overhead applied to each unit of product R78S = \$59.46 per direct labor-hour × 0.4 direct labor-hours per unit = \$23.78 per unit

Direct materials	\$ 27.20
Direct labor	8.80
Overhead	23.78
Unit product cost	<u>\$ 59.78</u>

8) A

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Assembling products	\$ 672,000	24,000 direct labor-hours	\$ 28 per direct labor-hour
Preparing batches	\$ 255,840	1,968 batches	\$ per batch 130
Product support	\$ 499,200	1,248 variations	\$ per variation 400

The overhead cost charged to Product N32Y is:

	Activity Rate	Activity	ABC Cost
Assembling products	\$ 28 per direct labor-hour	10,000 direct labor-hours	\$ 280,000
Preparing batches	\$ per batch 130	1,152 batches	149,760
Product support	\$ per variation 400	408 variations	163,200
Total			<u>\$ 592,960</u>

Overhead per unit of Product N32Y = \$592,960 ÷ 10,000 units = \$59.30 per unit

Direct materials	\$ 54.70
Direct labor	22.00
Overhead	59.30
Unit product cost	<u>\$ 136.00</u>

9) C

Direct labor-hour calculation:

Product A 500 units × 0.4 direct labor-hours	200
Product B 1,000 units × 0.2 direct labor-hours	200
Total direct labor-hours	<u>400</u>

Predetermined overhead rate = Total estimated overhead ÷ Total estimated direct labor-hours
= \$68,756 ÷ 400 direct labor-hours = \$171.89 per direct labor-hour

10) D

Managerial Accounting Edition 18 by Garrison

Direct labor-hour calculation:

Product A 500 units × 0.4 direct labor-hours	200
Product B 1,000 units × 0.2 direct labor-hours	200
Total direct labor-hours	400

Predetermined overhead rate = Total estimated overhead ÷ Total estimated direct labor-hours

= \$68,756 ÷ 400 direct labor-hours = \$171.89 per direct labor-hour

Overhead cost per unit of B = \$171.89 per direct labor-hour × 0.2 direct labor-hours per unit
= \$34.38 per unit

11) B

Activity rate for Activity 2 = \$22,249 ÷ 1,900 = \$11.71

12) D

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Activity 1	\$ 45,150	2,100	\$ 21.50
Activity 2	\$ 21,700	1,400	\$ 15.50
General Factory	\$ 40,800	1,200	\$ 34.00

The overhead cost charged to Product B is:

	Activity Rate	Activity	ABC Cost
Activity 1	\$ 21.50	700	\$ 15,050
Activity 2	\$ 15.50	500	7,750
General Factory	\$ 34.00	400	13,600
Total			\$ 36,400

Overhead cost per unit of Product B = \$36,400 ÷ 2,000 units = \$18.20 per unit

13) D

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Activity 1	\$ 31,031	1,300	\$ 23.87
Activity 2	\$ 22,249	1,900	\$ 11.71
General Factory	\$ 15,476	400	\$ 38.69

The overhead cost charged to Product B is:

	Activity Rate	Activity	ABC Cost
Activity 1	\$ 23.87	300	\$ 7,161
Activity 2	\$ 11.71	300	3,513
General Factory	\$ 38.69	200	7,738
Total			<u>\$ 18,412</u>

Overhead cost per unit of Product B = $\$18,412 \div 1,000 \text{ units} = \18.41 per unit

14) C

Direct materials	\$ 540
Direct labor	600
Manufacturing overhead (1.5 × \$600)	900
Unit product cost	<u>\$ 2,040</u>
Selling price (2.00 × \$2,040)	\$ 4,080

15) D

Managerial Accounting Edition 18 by Garrison

The activity rates are computed as follows:

Activity Cost Pools	Total Cost	Total Activity	Activity Rate
Machine Setups	\$ 150,000	400 setups	\$ 375 per setup
Quality Control	\$ 180,000	1,500 inspections	\$ 120 per inspection
Other Overhead	\$ 480,000	30,000 machine-hours	\$ 16 per machine-hour

The overhead cost charged to Model number 36 is:

Activity Cost Pools	Activity Rate	Activity	ABC Cost
Machine Setups	\$ 375 per setup	3 setups	\$ 1,125
Quality Control	\$ 120 per inspection	3 inspections	360
Other Overhead	\$ 16 per machine-hour	8 machine-hours	128
Total overhead cost			<u>\$ 1,613</u>
Direct materials	\$ 540		
Direct labor	600		
Manufacturing overhead (1.5 × \$600)	1,613		
Unit product cost	<u>\$ 2,753</u>		
Selling price (2.00 × \$2,753)	5,506		

16) A

Managerial Accounting Edition 18 by Garrison

The activity rates are computed as follows:

Activity Cost Pools	Total Cost	Total Activity	Activity Rate
Machine Setups	\$ 150,000	400 setups	\$ 375 per setup
Quality Control	\$ 180,000	1,500 inspections	\$ 120 per inspection
Other Overhead	\$ 480,000	30,000 machine-hours	\$ 16 per machine-hour

The overhead cost charged to Model number 19 is:

Activity Cost Pools	Activity Rate	Activity	ABC Cost
Machine Setups	\$ 375 per setup	2 setups	\$ 750
Quality Control	\$ 120 per inspection	1 inspections	120
Other Overhead	\$ 16 per machine-hour	4 machine-hours	64
Total overhead cost			\$ 934

The overhead cost charged to Model number 36 is:

Activity Cost Pools	Activity Rate	Activity	ABC Cost
Machine Setups	\$ 375 per setup	3 setups	\$ 1,125
Quality Control	\$ 120 per inspection	3 inspections	360
Other Overhead	\$ 16 per machine-hour	8 machine-hours	128
Total overhead cost			\$ 1,613

The overhead cost charged to Model number 58 is:

Activity Cost Pools	Activity Rate	Activity	ABC Cost
Machine Setups	\$ 375 per setup	1 setups	\$ 375
Quality Control	\$ 120 per inspection	1 inspections	120
Other Overhead	\$ 16 per machine-hour	10 machine-hours	160
Total overhead cost			\$ 655

Traditional product costing overhead cost:

	Model number 19	Model number 36	Model number 58
Direct labor cost	\$ 810	\$ 600	\$ 220
Overhead cost (150% of direct labor cost)	\$ 1,125	\$ 900	\$ 330

Managerial Accounting Edition 18 by Garrison

The overhead costs are the only difference in unit product costs between the traditional costing system and the activity-based costing system. Therefore, Model number 19 is the only product that has a higher unit product cost under the traditional system.

17) A

Direct labor-hour calculation:

Product N06D 49,400 units × 0.20 direct labor-hours per unit	9,880
Product M09K 16,100 units × 1.00 direct labor-hours per unit	16,100
Total direct labor-hours	25,980

Predetermined overhead rate = Total estimated overhead cost ÷ Total estimated direct labor-hours

= \$1,294,164 ÷ 25,980 direct labor-hours = \$49.81 per direct labor-hour

Overhead applied to product N06D = \$49.81 per direct labor-hour × 0.20 direct labor-hours per unit

= \$9.96 per unit

18) A

Direct labor-hour calculation:

Product N06D 40,000 units × 0.50 direct labor-hours per unit	20,000
Product M09K 15,000 units × 1.60 direct labor-hours per unit	24,000
Total direct labor-hours	44,000

Predetermined overhead rate = Total estimated overhead cost ÷ Total estimated direct labor-hours

= \$2,532,200 ÷ 44,000 direct labor-hours = \$57.55 per direct labor-hour

Overhead applied to product N06D = \$57.55 per direct labor-hour × 0.50 direct labor-hours per unit

= \$28.78 per unit

19) A

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Supporting direct labor	\$ 518,040	28,780 direct labor-hours	\$ 18 per direct labor-hour
Setting up machines	\$ 488,176	2,347 setups	\$ per setup 208
Parts administration	\$ 448,380	954 part types	\$ per part 470 type

The overhead cost charged to Product M09K is:

	Activity Rate	Activity	ABC Cost
Supporting direct labor	\$ 18.00 per direct labor-hour	18,600 direct labor-hours	\$ 334,800
Setting up machines	\$ per setup 208.00	1,007 setups	209,456
Parts administration	\$ per part 470.00 type	271 part types	127,370
Total			<u>\$ 671,626</u>

Overhead applied to a unit of product M09K = $\$671,626 \div 18,600 \text{ units} = \36.11 per unit

20) A

Managerial Accounting Edition 18 by Garrison

The activity rates for each activity cost pool are computed as follows:

	Total Cost	Total Activity	Activity Rate
Supporting direct labor	\$ 880,000	44,000 direct labor-hours	\$ 20 per direct labor-hour
Setting up machines	\$ 376,200	2,508 setups	\$ 150 per setup
Parts administration	\$ 1,276,000	2,552 part types	\$ 500 per part type

The overhead cost charged to Product M09K is:

	Activity Rate	Activity	ABC Cost
Supporting direct labor	\$ 20 per direct labor-hour	24,000 direct labor-hours	\$ 480,000
Setting up machines	\$ 150 per setup	1,100 setups	165,000
Parts administration	\$ 500 per part type	1,012 part types	506,000
Total			<u>\$ 1,151,000</u>

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The expected total direct labor-hours during the period are computed as follows:

Product C: 2,000 units × 2.0 hours per unit	4,000 hours
Product D: 2,700 units × 0.8 hours per unit	2,160 hours
Total direct labor-hours	<u>6,160 hours</u>

Using these hours as a base, the predetermined overhead using direct labor-hours would be:

Predetermined overhead rate = Estimated total overhead cost ÷ Estimated total direct labor-hours = \$167,140 ÷ 6,160 direct labor-hours = \$27.13 per direct labor-hour

Using this overhead rate, the unit product costs are:

	Product C	Product D
Direct materials	\$ 21.50	\$ 24.10
Direct labor	24.00	9.60
Manufacturing overhead (2.0 direct labor-hours × \$27.13 per direct labor-hour; 0.8 direct labor-hours × \$27.13 per direct labor-hour)	54.27	21.71
Total unit product cost	<u>\$ 99.77</u>	<u>\$ 55.41</u>

The activity rates for each activity cost pool are as follows:

	Estimated Overhead Cost	Expected Activity	Activity Rate
Machine setups	\$ 13,630	290 setups	\$ 47.00 per setup
Purchase orders	\$ 85,750	1,750 orders	\$ 49.00 per order
General factory	\$ 67,760	6,160 direct labor-hours	\$ 11.00 per direct labor-hour

The overhead cost charged to Product C is:

	Activity Rate	Activity	Amount
Machine setups	\$ 53.00 per setup	130 setups	\$ 6,110
Purchase orders	\$ 38.00 per order	750 orders	36,750
General factory	\$ 13.00 per direct labor-hour	4,000 direct labor-hours	44,000
Total overhead cost			<u>\$ 86,860</u>

The overhead cost charged to Product D is:

	Activity Rate	Activity	Amount
Machine setups	\$ 53.00 per setup	160 setups	\$ 7,520
Purchase orders	\$ 38.00 per order	1,000 orders	49,000

Managerial Accounting Edition 18 by Garrison

General factory	\$ 13.00 per direct	2,160 direct	23,760
	labor-hour	labor-hours	
Total overhead			\$ 80,280
cost			

Overhead cost per unit:

Product C: $\$86,860 \div 2,000 \text{ units} = \43.43 per unit.

Product D: $\$80,280 \div 2,700 \text{ units} = \29.73 per unit.

Using activity based costing, the unit product cost of each product would be:

	Product C	Product D
Direct materials	\$ 21.50	\$ 24.10
Direct labor	24.00	9.60
Manufacturing overhead	43.43	29.73
Total unit product cost	\$ 88.93	\$ 63.43

ABC Manufacturing Overhead Costs

	Estimated Overhead Cost	Total Expected Activity	Activity Rate
Assembling products	\$ 1,216,000	64,000 direct labor-hours	\$ 19 per direct labor-hour
Preparing batches	\$ 480,000	4,800 batches	\$ per batch 100
Milling	\$ 960,000	3,200 machine-hours	\$ per machine-hour 300

Overhead cost for B40W

	Activity Rate	Activity	ABC Cost
Assembling products	\$ 19 per direct labor-hour	28,000 direct labor-hours	\$ 532,000
Preparing batches	\$ per batch 100	2,304 batches	230,400
Milling	\$ per machine-hour 300	1,088 machine-hours	326,400
Total			\$ 1,088,800

Overhead cost for C63J

	Activity Rate	Activity	ABC Cost
Assembling products	\$ 19 per direct labor-hour	36,000 direct labor-hours	\$ 684,000
Preparing batches	\$ 100 per batch	2,496 batches	249,600
Milling	\$ 300 per machine-hour	2,112 machine-hours	633,600

Managerial Accounting Edition 18 by Garrison

Total			\$
			<u>1,567,200</u>
	B40W	C63J	
Direct materials	\$	\$ 63.70	
	34.90		
Direct labor	20.80	62.40	
Manufacturing overhead	31.11	104.48	
(\$1,088,800 ÷ 35,000 units;			
\$1,567,200 ÷ 15,000 units)			
Unit product cost	<u>\$</u>	<u>\$ 230.58</u>	
	86.81		

29) Essay

TBEXAM.COM

Managerial Accounting Edition 18 by Garrison

The expected total direct labor-hours during the period are computed as follows:

Product C: 2,000 units × 2.0 hours per unit	4,000 hours
Product D: 2,700 units × 0.8 hours per unit	2,160 hours
Total direct labor-hours	<u>6,160 hours</u>

Using these hours as a base, the predetermined overhead using direct labor-hours would be:

Predetermined overhead rate = Estimated total overhead cost ÷ Estimated total direct labor-hours = \$167,140 ÷ 6,160 direct labor-hours = \$27.13 per direct labor-hour

Using this overhead rate, the unit product costs are:

	Product C	Product D
Direct materials	\$ 21.50	\$ 24.10
Direct labor	24.00	9.60
Manufacturing overhead (2.0 direct labor-hours × \$27.13 per direct labor-hour; 0.8 direct labor-hours × \$27.13 per direct labor-hour)	54.27	21.71
Total unit product cost	<u>\$ 99.77</u>	<u>\$ 55.41</u>

The activity rates for each activity cost pool are as follows:

	Estimated Overhead Cost	Expected Activity	Activity Rate
Machine setups	\$ 13,630	290 setups	\$ 47.00 per setup
Purchase orders	\$ 85,750	1,750 orders	\$ 49.00 per order
General factory	\$ 67,760	6,160 direct labor-hours	\$ 11.00 per direct labor-hour

The overhead cost charged to Product C is:

	Activity Rate	Activity	Amount
Machine setups	\$ 53.00 per setup	130 setups	\$ 6,110
Purchase orders	\$ 38.00 per order	750 orders	36,750
General factory	\$ 13.00 per direct labor-hour	4,000 direct labor-hours	44,000
Total overhead cost			<u>\$ 86,860</u>

The overhead cost charged to Product D is:

	Activity Rate	Activity	Amount
Machine setups	\$ 53.00 per setup	160 setups	\$ 7,520

Managerial Accounting Edition 18 by Garrison

Purchase orders	\$ 38.00 per order	1,000 orders	49,000
General factory	\$ 13.00 per direct labor-hour	2,160 direct labor-hours	23,760
Total overhead cost			<u>\$ 80,280</u>

Overhead cost per unit:

Product C: $\$86,860 \div 2,000 \text{ units} = \43.43 per unit.

Product D: $\$80,280 \div 2,700 \text{ units} = \29.73 per unit.

Using activity based costing, the unit product cost of each product would be:

	Product C	Product D
Direct materials	\$ 21.50	\$ 24.10
Direct labor	24.00	9.60
Manufacturing overhead	43.43	29.73
Total unit product cost	\$ 88.93	\$ 63.43

Managerial Accounting Edition 18 by Garrison

CORRECT ANSWERS ARE LOCATED IN THE 2ND HALF OF THIS DOC.

MULTIPLE CHOICE - Choose the one alternative that best completes the statement or answers the question.

- 1) Which of the following statements is true?
 1. When the fixed costs of capacity are spread over the estimated activity of the period rather than the level of activity at capacity, the units that are produced must shoulder the costs of unused capacity.
 2. When the predetermined overhead rate is based on the level of activity at capacity, an item called the Cost of Unused Capacity may appear to be treated as a period expense on income statements prepared for internal management use.
 3. If the predetermined overhead rate is based on the estimated level of activity for the current period, then products will be charged only for the capacity that they use and will not be charged for the capacity they don't use.
 - A) Only statement I is true.
 - B) Only statement III is true.
 - C) Statements I and II are true.
 - D) None of the statements are true.

Managerial Accounting Edition 18 by Garrison

- 2) Risser Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 20,000
Capacity of the jointer	400 hours

Actual results:

Sales	\$ 61,800
Direct materials	\$ 15,400
Direct labor	\$ 13,850
Actual total fixed manufacturing overhead	\$ 20,000
Selling and administrative expense	\$ 9,800
Actual hours of jointer use	380 hours

The gross margin that would be reported on the income statement prepared for internal management purposes would be closest to:

- A) \$3,750
- B) \$13,550
- C) \$23,350
- D) \$61,800

Managerial Accounting Edition 18 by Garrison

- 3) Risser Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 14,256
Capacity of the jointer	240 hours

Actual results:

Sales	\$ 62,310
Direct materials	\$ 14,100
Direct labor	\$ 16,000
Actual total fixed manufacturing overhead	\$ 14,256
Selling and administrative expense	\$ 8,900
Actual hours of jointer use	220 hours

The gross margin that would be reported on the income statement prepared for internal management purposes would be closest to:

- A) \$10,242
- B) \$19,142
- C) \$17,954
- D) \$62,310

Managerial Accounting Edition 18 by Garrison

- 4) The management of Garn Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated activity for the coming year. The Corporation's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated activity for the upcoming year is 55,200 machine-hours. Capacity is 71,200 machine-hours. All of the manufacturing overhead is fixed and is \$3,132,800 per year within the range of 55,200 to 71,200 machine-hours. If the Corporation bases its predetermined overhead rate on capacity but the actual level of activity for the year turns out to be 56,000 machine-hours, the cost of unused capacity shown on the income statement prepared for internal management purposes would be closest to:
- A) \$44,754
 - B) \$713,554
 - C) \$668,800
 - D) \$45,403
- 5) The management of Garn Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated activity for the coming year. The Corporation's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated activity for the upcoming year is 69,000 machine-hours. Capacity is 85,000 machine-hours. All of the manufacturing overhead is fixed and is \$4,105,500 per year within the range of 69,000 to 85,000 machine-hours. If the Corporation bases its predetermined overhead rate on capacity but the actual level of activity for the year turns out to be 69,700 machine-hours, the cost of unused capacity shown on the income statement prepared for internal management purposes would be closest to:
- A) \$772,800
 - B) \$780,640
 - C) \$738,990
 - D) \$41,650

Managerial Accounting Edition 18 by Garrison

- 6) The management of Krach Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 23,000 machine-hours. Capacity is 26,000 machine-hours and the actual level of activity for the year is assumed to be 13,000 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$65,000 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$3,000
- B) \$32,500
- C) \$25,000
- D) \$57,500

- 7) The management of Krach Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 10,000 machine-hours. Capacity is 12,000 machine-hours and the actual level of activity for the year is assumed to be 9,500 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$12,000 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$2,000
- B) \$2,500
- C) \$1,900
- D) \$600

Managerial Accounting Edition 18 by Garrison

- 8) The management of Winterroth Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The Corporation's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours.

	Estimated at the Beginning of the Year	Capacity	Actual
Machine-hours	52,000	62,000	48,000
Manufacturing overhead	\$ 1,842,020	\$ 1,842,020	\$ 1,842,020

If the Corporation bases its predetermined overhead rate on capacity, then as shown on the income statement prepared for internal management purposes, the cost of unused capacity would be closest to:

- A) \$297,100
- B) \$415,940
- C) \$162,000
- D) \$141,694

- 9) The management of Winterroth Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The Corporation's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours.

	Estimated at the Beginning of the Year	Capacity	Actual
Machine-hours	53,000	63,000	49,000
Manufacturing overhead	\$ 1,803,060	\$ 1,803,060	\$ 1,803,060

If the Corporation bases its predetermined overhead rate on capacity, then as shown on the income statement prepared for internal management purposes, the cost of unused capacity would be closest to:

- A) \$286,200
- B) \$400,680
- C) \$264,600
- D) \$136,080

Managerial Accounting Edition 18 by Garrison

- 10) Dowty Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated lathe. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 19,964
Capacity of the lathe	280 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 19,964
Actual hours of lathe use	230 hours

The manufacturing overhead applied is closest to:

- A) \$19,964
- B) \$16,399
- C) \$7,639
- D) \$9,300

- 11) Rapier Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 3,496
Capacity of the jointer	190 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 3,496
Actual hours of jointer use	160 hours

The predetermined overhead rate based on hours at capacity is closest to:

- A) \$59.35 per hour
- B) \$50.10 per hour
- C) \$21.85 per hour
- D) \$18.40 per hour

Managerial Accounting Edition 18 by Garrison

- 12) Rapier Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 3,740
Capacity of the jointer	200 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 3,740
Actual hours of jointer use	170 hours

The predetermined overhead rate based on hours at capacity is closest to:

- A) \$58.24 per hour
- B) \$49.50 per hour
- C) \$22.00 per hour
- D) \$18.70 per hour

- 13) Traeger Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated bandsaw. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 27,962
Capacity of the bandsaw	310 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 27,962
Actual hours of bandsaw use	290 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$1,804
- B) \$16,236
- C) \$0
- D) \$18,040

Managerial Accounting Edition 18 by Garrison

- 14) Traeger Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated bandsaw. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 26,936
Capacity of the bandsaw	280 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 26,936
Actual hours of bandsaw use	260 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$1,924
- B) \$18,136
- C) \$0
- D) \$18,765

Managerial Accounting Edition 18 by Garrison

- 15) Mausser Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 10,040
Capacity of the jointer	200 hours

Actual results:

Sales	\$ 75,300
Direct materials	\$ 12,650
Direct labor	\$ 12,800
Actual total fixed manufacturing overhead	\$ 10,040
Selling and administrative expense	\$ 9,500
Actual hours of jointer use	170 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$0
- B) \$540
- C) \$1,506
- D) \$2,046

Managerial Accounting Edition 18 by Garrison

- 16) Mausser Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 11,648
Capacity of the jointer	280 hours

Actual results:

Sales	\$ 52,760
Direct materials	\$ 13,300
Direct labor	\$ 16,000
Actual total fixed manufacturing overhead	\$ 11,648
Selling and administrative expense	\$ 9,300
Actual hours of jointer use	260 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$0
- B) \$2,348
- C) \$832
- D) \$3,012

Managerial Accounting Edition 18 by Garrison

- 17) Mausser Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 11,648

Actual results:

Sales	\$ 52,760
Direct materials	\$ 13,300
Direct labor	\$ 16,000
Actual total fixed manufacturing overhead	\$ 11,648
Selling and administrative expense	\$ 9,300
Actual hours of jointer use	260 hours

The gross margin that would be reported on the income statement prepared for internal management purposes would be closest to:

- A) \$52,760
- B) \$3,344
- C) \$12,644
- D) \$11,812

Managerial Accounting Edition 18 by Garrison

- 18) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 33,075
Capacity of the shaper	270 hours

Actual results:

Sales	\$ 79,268
Direct materials	\$ 12,200
Direct labor	\$ 17,400
Actual total fixed manufacturing overhead	\$ 33,075
Selling and administrative expense	\$ 8,100
Actual hours of shaper use	250 hours

The predetermined overhead rate based on hours at capacity is closest to:

- A) \$30.00 per hour
- B) \$122.50 per hour
- C) \$32.40 per hour
- D) \$132.30 per hour

Managerial Accounting Edition 18 by Garrison

- 19) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 66,880
Capacity of the shaper	380 hours

Actual results:

Sales	\$ 115,000
Direct materials	\$ 11,400
Direct labor	\$ 16,200
Actual total fixed manufacturing overhead	\$ 66,880
Selling and administrative expense	\$ 4,900
Actual hours of shaper use	360 hours

The manufacturing overhead applied is closest to:

- A) \$6,053
- B) \$66,880
- C) \$4,900
- D) \$63,360

Managerial Accounting Edition 18 by Garrison

20) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 33,075
Capacity of the shaper	270 hours

Actual results:

Sales	\$ 79,268
Direct materials	\$ 12,200
Direct labor	\$ 17,400
Actual total fixed manufacturing overhead	\$ 33,075
Selling and administrative expense	\$ 8,100
Actual hours of shaper use	250 hours

The manufacturing overhead applied is closest to:

- A) \$7,500
- B) \$33,075
- C) \$8,100
- D) \$30,625

Managerial Accounting Edition 18 by Garrison

- 21) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 30,510
Capacity of the shaper	270 hours

Actual results:

Sales	\$ 104,000
Direct materials	\$ 11,500
Direct labor	\$ 16,500
Actual total fixed manufacturing overhead	\$ 30,510
Selling and administrative expense	\$ 3,800
Actual hours of shaper use	230 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$4,520
- B) \$0
- C) \$26,710
- D) \$30,510

Managerial Accounting Edition 18 by Garrison

- 22) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 33,075
Capacity of the shaper	270 hours

Actual results:

Sales	\$ 79,268
Direct materials	\$ 12,200
Direct labor	\$ 17,400
Actual total fixed manufacturing overhead	\$ 33,075
Selling and administrative expense	\$ 8,100
Actual hours of shaper use	250 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$2,450
- B) \$0
- C) \$24,975
- D) \$25,575

Managerial Accounting Edition 18 by Garrison

- 23) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 85,950
Capacity of the shaper	450 hours

Actual results:

Sales	\$ 157,000
Direct materials	\$ 11,800
Direct labor	\$ 16,900
Actual total fixed manufacturing overhead	\$ 85,950
Selling and administrative expense	\$ 5,300
Actual hours of shaper use	410 hours

The gross margin that would be reported on the income statement prepared for internal management purposes would be closest to:

- A) \$49,990
- B) \$37,050
- C) \$44,690
- D) \$157,000

Managerial Accounting Edition 18 by Garrison

- 24) Coble Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated shaper. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 33,075
Capacity of the shaper	270 hours

Actual results:

Sales	\$ 79,268
Direct materials	\$ 12,200
Direct labor	\$ 17,400
Actual total fixed manufacturing overhead	\$ 33,075
Selling and administrative expense	\$ 8,100
Actual hours of shaper use	250 hours

The gross margin that would be reported on the income statement prepared for internal management purposes would be closest to:

- A) \$19,043
- B) \$16,593
- C) \$10,943
- D) \$79,268

Managerial Accounting Edition 18 by Garrison

- 25) Dunnings Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated router. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 10,998
Capacity of the router	180 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 10,998
Actual hours of router use	130 hours

The predetermined overhead rate based on hours at capacity is closest to:

- A) \$84.60 per hour
- B) \$61.10 per hour
- C) \$61.54 per hour
- D) \$44.44 per hour

- 26) Dunnings Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated router. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 10,998
Capacity of the router	180 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 10,998
Actual hours of router use	130 hours

The manufacturing overhead applied is closest to:

- A) \$7,943
- B) \$8,000
- C) \$5,778
- D) \$10,998

Managerial Accounting Edition 18 by Garrison

- 27) The management of Bullinger Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 27,000 machine-hours. Capacity is 30,000 machine-hours and the actual level of activity for the year is assumed to be 25,700 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$35,910 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on the estimated amount of the allocation base for the upcoming year, then the predetermined overhead rate is closest to:

- A) \$1.33 per machine-hour
- B) \$1.50 per machine-hour
- C) \$1.20 per machine-hour
- D) \$1.40 per machine-hour

- 28) The management of Bullinger Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 9,000 machine-hours. Capacity is 12,000 machine-hours and the actual level of activity for the year is assumed to be 7,700 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$11,880 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on the estimated amount of the allocation base for the upcoming year, then the predetermined overhead rate is closest to:

- A) \$1.32 per machine-hour
- B) \$1.49 per machine-hour
- C) \$0.99 per machine-hour
- D) \$1.54 per machine-hour

Managerial Accounting Edition 18 by Garrison

29) The management of Bullinger Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 17,000 machine-hours. Capacity is 20,000 machine-hours and the actual level of activity for the year is assumed to be 15,700 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$25,500 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, then the predetermined overhead rate is closest to:

- A) \$1.62 per machine-hour
- B) \$1.50 per machine-hour
- C) \$1.67 per machine-hour
- D) \$1.28 per machine-hour

30) The management of Bullinger Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 9,000 machine-hours. Capacity is 12,000 machine-hours and the actual level of activity for the year is assumed to be 7,700 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$11,880 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, then the predetermined overhead rate is closest to:

- A) \$1.54 per machine-hour
- B) \$1.32 per machine-hour
- C) \$1.49 per machine-hour
- D) \$0.99 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 31) The management of Bullinger Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 12,000 machine-hours. Capacity is 15,000 machine-hours and the actual level of activity for the year is assumed to be 10,700 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$16,560 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

Note: Round intermediate calculations to 2 decimal places.

- A) \$3,060.00
- B) \$2,996.00
- C) \$1,794.00
- D) \$4,790.00

- 32) The management of Bullinger Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 9,000 machine-hours. Capacity is 12,000 machine-hours and the actual level of activity for the year is assumed to be 7,700 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$11,880 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$2,970
- B) \$2,541
- C) \$1,716
- D) \$4,257

Managerial Accounting Edition 18 by Garrison

- 33) Zackery Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated lathe. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 7,452
Capacity of the lathe	230 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 7,452
Actual hours of lathe use	180 hours

The manufacturing overhead applied is closest to:

- A) \$9,900
- B) \$5,832
- C) \$7,748
- D) \$7,452

- 34) Zackery Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated lathe. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 7,452
Capacity of the lathe	230 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 7,452
Actual hours of lathe use	180 hours

The cost of unused capacity that would be reported as a period expense on the income statement prepared for internal management purposes would be closest to:

- A) \$2,448
- B) \$296
- C) \$0
- D) \$1,620

Managerial Accounting Edition 18 by Garrison

- 35) The management of Holdaway Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 78,000 machine-hours. Capacity is 87,000 machine-hours and the actual level of activity for the year is assumed to be 73,900 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$5,701,110 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, then the predetermined overhead rate is closest to:

- A) \$73.09 per machine-hour
- B) \$71.26 per machine-hour
- C) \$77.15 per machine-hour
- D) \$65.53 per machine-hour

- 36) The management of Holdaway Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 79,000 machine-hours. Capacity is 88,000 machine-hours and the actual level of activity for the year is assumed to be 74,900 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$5,700,640 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, then the predetermined overhead rate is closest to:

- A) \$72.16 per machine-hour
- B) \$70.38 per machine-hour
- C) \$76.11 per machine-hour
- D) \$64.78 per machine-hour

Managerial Accounting Edition 18 by Garrison

37) The management of Holdaway Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 79,000 machine-hours. Capacity is 88,000 machine-hours and the actual level of activity for the year is assumed to be 74,900 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$5,700,640 per year. For simplicity, it is assumed that this is the estimated manufacturing overhead for the year as well as the manufacturing overhead at capacity. It is further assumed that this is also the actual amount of manufacturing overhead for the year.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$295,856
- B) \$848,618
- C) \$583,020
- D) \$552,762

38) The management of Featheringham Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 59,800 machine-hours. Capacity is 72,800 machine-hours and the actual level of activity for the year is assumed to be 56,800 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,835,560 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Z77W which required 520 machine-hours.

If the company bases its predetermined overhead rate on capacity, then the predetermined overhead rate is closest to:

- A) \$47.42 per machine-hour
- B) \$38.95 per machine-hour
- C) \$50.38 per machine-hour
- D) \$45.88 per machine-hour

Managerial Accounting Edition 18 by Garrison

39) The management of Featheringham Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 62,000 machine-hours. Capacity is 75,000 machine-hours and the actual level of activity for the year is assumed to be 59,000 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,836,500 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Z77W which required 410 machine-hours.

If the company bases its predetermined overhead rate on capacity, then the predetermined overhead rate is closest to:

- A) \$48.08 per machine-hour
- B) \$37.82 per machine-hour
- C) \$48.91 per machine-hour
- D) \$45.75 per machine-hour

40) The management of Featheringham Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 67,400 machine-hours. Capacity is 80,400 machine-hours and the actual level of activity for the year is assumed to be 64,400 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,836,512 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Z77W which required 450 machine-hours.

If the company bases its predetermined overhead rate on capacity, then the amount of manufacturing overhead charged to job Z77W is closest to:

- A) \$15,876.00
- B) \$19,224.00
- C) \$20,160.20
- D) \$19,820.35

Managerial Accounting Edition 18 by Garrison

- 41) The management of Featheringham Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 62,000 machine-hours. Capacity is 75,000 machine-hours and the actual level of activity for the year is assumed to be 59,000 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,836,500 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Z77W which required 410 machine-hours.

If the company bases its predetermined overhead rate on capacity, then the amount of manufacturing overhead charged to job Z77W is closest to:

- A) \$15,506.20
- B) \$19,065.00
- C) \$20,051.12
- D) \$19,711.27

- 42) The management of Featheringham Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 62,000 machine-hours. Capacity is 75,000 machine-hours and the actual level of activity for the year is assumed to be 59,000 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,836,500 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Z77W which required 410 machine-hours.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$137,250
- B) \$605,120
- C) \$491,660
- D) \$467,870

Managerial Accounting Edition 18 by Garrison

- 43) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 78,000 machine-hours. Capacity is 101,000 machine-hours and the actual level of activity for the year is assumed to be 80,500 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$4,726,800 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Q20L which required 370 machine-hours.

If the company bases its predetermined overhead rate on the estimated amount of the allocation base for the upcoming year, then the predetermined overhead rate is closest to:

- A) \$58.72 per machine-hour
- B) \$45.35 per machine-hour
- C) \$60.60 per machine-hour
- D) \$46.80 per machine-hour

- 44) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 69,000 machine-hours. Capacity is 82,000 machine-hours and the actual level of activity for the year is assumed to be 72,400 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$4,130,340 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Q20L which required 470 machine-hours.

If the company bases its predetermined overhead rate on the estimated amount of the allocation base for the upcoming year, then the predetermined overhead rate is closest to:

- A) \$57.05 per machine-hour
- B) \$60.83 per machine-hour
- C) \$59.86 per machine-hour
- D) \$50.37 per machine-hour

Managerial Accounting Edition 18 by Garrison

- 45) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 55,000 machine-hours. Capacity is 76,000 machine-hours and the actual level of activity for the year is assumed to be 71,000 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,508,000 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Q20L which required 410 machine-hours.

If the company bases its predetermined overhead rate on the estimated amount of the allocation base for the upcoming year, then the amount of manufacturing overhead charged to Job Q20L is closest to:

- A) \$13,530.00
- B) \$14,482.82
- C) \$10,480.99
- D) \$18,696.00

- 46) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 69,000 machine-hours. Capacity is 82,000 machine-hours and the actual level of activity for the year is assumed to be 72,400 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$4,130,340 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Q20L which required 470 machine-hours.

If the company bases its predetermined overhead rate on the estimated amount of the allocation base for the upcoming year, then the amount of manufacturing overhead charged to Job Q20L is closest to:

- A) \$23,673.90
- B) \$26,812.98
- C) \$28,589.98
- D) \$28,134.20

Managerial Accounting Edition 18 by Garrison

- 47) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 69,000 machine-hours. - 50) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 61,000 machine-hours. Capacity is 76,000 machine-hours and the actual level of activity for the year is assumed to be 65,000 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$2,688,880 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Q20L which required 410 machine-hours.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$530,700
- B) \$176,320
- C) \$165,470
- D) \$389,180

Managerial Accounting Edition 18 by Garrison

51) The management of Plitt Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 69,000 machine-hours. Capacity is 82,000 machine-hours and the actual level of activity for the year is assumed to be 72,400 machine-hours. All of the manufacturing overhead is fixed and both the estimated amount at the beginning of the year and the actual amount at the end of the year are assumed to be \$4,130,340 per year. It is assumed that a number of jobs were worked on during the year, one of which was Job Q20L which required 470 machine-hours.

If the company bases its predetermined overhead rate on capacity, what would be the cost of unused capacity reported on the income statement prepared for internal management purposes?

- A) \$654,810
- B) \$687,076
- C) \$547,669
- D) \$483,552

ESSAY. Write your answer in the space provided or on a separate sheet of paper.

52) The management of Koteck Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 8,000 machine-hours. In addition, capacity is 10,000 machine-hours and the actual activity for the year is 8,700 machine-hours. All of the manufacturing overhead is fixed and is \$6,400 per year. Job L77S, which required 220 machine-hours, is one of the jobs worked on during the year.

Required:

- a. Determine the predetermined overhead rate if the predetermined overhead rate is based on activity at capacity.
- b. Determine how much overhead would be applied to Job L77S if the predetermined overhead rate is based on activity at capacity.
- c. Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

Managerial Accounting Edition 18 by Garrison

- 53) The management of Michaeli Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work.

Estimated activity for the upcoming year	31,000 machine-hours
Capacity	43,000 machine-hours
Actual activity for the year	32,900 machine-hours
Manufacturing overhead (all fixed)	\$ 799,800 per year

Required: Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

- 54) The management of Michaeli Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work.

Estimated activity for the upcoming year	43,000 machine-hours
Capacity	50,000 machine-hours
Actual activity for the year	45,400 machine-hours
Manufacturing overhead (all fixed)	\$ 989,000 per year

Required: Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

Managerial Accounting Edition 18 by Garrison

55) The management of Schneiter Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 42,000 machine-hours. In addition, capacity is 46,000 machine-hours and the actual activity for the year is 43,000 machine-hours. All of the manufacturing overhead is fixed and is \$734,160 per year.

Required:

- a. Determine the predetermined overhead rate if the predetermined overhead rate is based on activity at capacity.
- b. Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

Managerial Accounting Edition 18 by Garrison

56) Marder Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated jointer. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 24,500
Capacity of the jointer	250 hours

Actual results:

Sales	\$ 71,706
Direct materials	\$ 12,500
Direct labor	\$ 17,900
Actual total fixed manufacturing overhead	\$ 24,500
Selling and administrative expense	\$ 9,700
Actual hours of jointer use	200 hours

Required:

TBEXAM.COM

- Calculate the predetermined overhead rate based on capacity.
- Calculate the manufacturing overhead applied.
- Determine the Gross Margin for the month.
- Calculate the cost of unused capacity.

Managerial Accounting Edition 18 by Garrison

- 57) The management of Bouyer Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work. In this example, the allocation base is machine-hours and the estimated amount of the allocation base for the upcoming year is 34,000 machine-hours. In addition, capacity is 37,000 machine-hours and the actual activity for the year is 34,700 machine-hours. All of the manufacturing overhead is fixed and is \$377,400 per year.
- Required:** Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

- 58) The management of Buelow Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work.

Estimated activity for the upcoming year	76,000 machine-hours
Capacity	94,000 machine-hours
Actual activity for the year	82,800 machine-hours
Manufacturing overhead (all fixed)	\$ 5,572,320 per year

Job Q58A, which required 130 machine-hours, is one of the jobs worked on during the year.

Required:

- Determine the predetermined overhead rate if the predetermined overhead rate is based on the estimated activity for the upcoming year.
- Determine how much overhead would be applied to Job Q58A if the predetermined overhead rate is based on estimated activity for the upcoming year.
- Determine the predetermined overhead rate if the predetermined overhead rate is based on the activity at capacity.
- Determine how much overhead would be applied to Job Q58A if the predetermined overhead rate is based on activity at capacity.
- Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

Managerial Accounting Edition 18 by Garrison

- 59) Knipple Woodworking Corporation produces fine cabinets. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated bandsaw. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 24,288
Capacity of the bandsaw	240 hours

Actual results:

Sales	\$ 71,473
Direct materials	\$ 10,400
Direct labor	\$ 17,300
Actual total fixed manufacturing overhead	\$ 24,288
Selling and administrative expense	\$ 9,100
Actual hours of bandsaw use	230 hours

Required: Prepare an income statement following the Example in Appendix 2B in which any cost of unused capacity is directly recorded on the income statement as a period expense.

Managerial Accounting Edition 18 by Garrison

- 60) The management of Wrights Corporation would like to investigate the possibility of basing its predetermined overhead rate on activity at capacity rather than on the estimated amount of activity for the year. The company's controller has provided an example to illustrate how this new system would work.

Estimated activity for the upcoming year	15,000 machine-hours
Capacity	18,000 machine-hours
Actual activity for the year	15,800 machine-hours
Manufacturing overhead (all fixed)	\$ 43,200 per year

Required:

- Determine the predetermined overhead rate if the predetermined overhead rate is based on the estimated activity for the upcoming year.
- Determine the cost of unused capacity for the year if the predetermined overhead rate is based on activity at capacity.

- 61) Danaher Woodworking Corporation produces fine furniture. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated lathe. Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 38,800
Capacity of the lathe	400 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 38,800
Actual hours of lathe use	360 hours

Required:

- Calculate the predetermined overhead rate based on capacity.
- Calculate the manufacturing overhead applied.
- Calculate the cost of unused capacity.

Managerial Accounting Edition 18 by Garrison

62) Danaher Woodworking Corporation produces fine furniture. The company uses a job-order costing system in which its predetermined overhead rate is based on capacity. The capacity of the factory is determined by the capacity of its constraint, which is an automated lathe.

Additional information is provided below for the most recent month:

Estimates at the beginning of the month:

Estimated total fixed manufacturing overhead	\$ 22,701
Capacity of the lathe	230 hours

Actual results:

Actual total fixed manufacturing overhead	\$ 22,701
Actual hours of lathe use	210 hours

Required:

- Calculate the predetermined overhead rate based on capacity.
- Calculate the manufacturing overhead applied.
- Calculate the cost of unused capacity.

Answer Key

Test name: Chapter 02B

1) C

2) B

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$20,000 ÷ 400

hours = \$50.00 per hour

Sales			\$ 61,800
--------------	--	--	-----------

Cost of Goods Sold:

Direct materials		\$ 15,400	
-------------------------	--	-----------	--

Direct labor		13,850	
---------------------	--	--------	--

Manufacturing overhead applied		19,000	48,250
---------------------------------------	--	--------	--------

380 hours × \$50.00 per hour			
------------------------------	--	--	--

Gross margin			\$ 13,550
---------------------	--	--	-----------

TBEXAM.COM

3) B

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$14,256 ÷ 240

hours = \$59.40 per hour

Sales			\$ 62,310
--------------	--	--	-----------

Cost of Goods Sold:

Direct materials		\$ 14,100	
-------------------------	--	-----------	--

Direct labor		16,000	
---------------------	--	--------	--

Manufacturing overhead applied		13,068	43,168
---------------------------------------	--	--------	--------

220 hours × \$59.40 per hour			
------------------------------	--	--	--

Gross margin			\$ 19,142
---------------------	--	--	-----------

4) C

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$3,132,800 ÷ 71,200 machine-hours = \$44.00 per machine-hour

Actual manufacturing overhead cost incurred	\$ 3,132,800	
Manufacturing overhead applied to jobs:		
Predetermined overhead rate	\$ 44.00	per machine-hour
Actual hours	56,000	machine-hours
Manufacturing overhead applied to jobs	\$ 2,464,000	
Cost of unused capacity	\$ 668,800	

5) C

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$4,105,500 ÷ 85,000 machine-hours = \$48.30 per machine-hour

Actual manufacturing overhead cost incurred	\$ 4,105,500	
Manufacturing overhead applied to jobs:		
Predetermined overhead rate	\$ 48.30	per machine-hour
Actual hours	69,700	machine-hours
Manufacturing overhead applied to jobs	\$ 3,366,510	
Cost of unused capacity	\$ 738,990	

6) B

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$65,000 ÷ 26,000 machine-hours = \$2.50 per machine-hour

Actual manufacturing overhead cost incurred	\$ 65,000	
Manufacturing overhead applied to jobs:		
Predetermined overhead rate	\$ 2.50 per machine-hour	
Actual hours	13,000 machine-hours	
Manufacturing overhead applied to jobs	\$ 32,500	
Cost of unused capacity		
	\$ 32,500	

7) B

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$12,000 ÷ 12,000 machine-hours = \$1.00 per machine-hour

Actual manufacturing overhead cost incurred	\$ 12,000	
Manufacturing overhead applied to jobs:		
Predetermined overhead rate	\$ 1.00 per machine-hour	
Actual hours	9,500 machine-hours	
Manufacturing overhead applied to jobs	\$ 9,500	
Cost of unused capacity		
	\$ 2,500	

8) B

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$1,842,020 ÷ 62,000 machine-hours = \$29.71 per machine-hour

Actual manufacturing overhead cost incurred	\$ 1,842,020	
Manufacturing overhead applied to jobs:		
Predetermined overhead rate	\$ 29.71 per machine-hour	
Actual hours	48,000 machine-hours	
Manufacturing overhead applied to jobs	\$ 1,426,080	
Cost of unused capacity		\$ 415,940

9) B

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$1,803,060 ÷ 63,000 machine-hours = \$28.62 per machine-hour

Actual manufacturing overhead cost incurred	\$ 1,803,060	
Manufacturing overhead applied to jobs:		
Predetermined overhead rate	\$ 28.62 per machine-hour	
Actual hours	49,000 machine-hours	
Manufacturing overhead applied to jobs	\$ 1,402,380	
Cost of unused capacity		\$ 400,680

10) B

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$19,964 ÷ 280 hours = \$71.30 per hour

Manufacturing overhead applied = Predetermined overhead rate × Actual amount of the allocation base = 230 hours × \$71.30 per hour = \$16,399

11) D

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$3,496 ÷ 190 hours = \$18.40 per hour

12) D

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$3,740 ÷ 200 hours = \$18.70 per hour

13) A

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$27,962 ÷ 310 hours = \$90.20 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = (310 hours – 290 hours) × \$90.20 per hour = \$1,804

14) A

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$26,936 ÷ 280 hours = \$96.20 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = (280 hours – 260 hours) × \$96.20 per hour = \$1,924

15) C

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$10,040 ÷ 200 hours = \$50.20 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = (200 hours – 170 hours) × \$50.20 per hour = \$1,506

16) C

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$11,648 ÷ 280 hours = \$41.60 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = (280 hours – 260 hours) × \$41.60 per hour = \$832

17) C

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$11,648 ÷ 280 hours = \$41.60 per hour

Sales			\$ 52,760
Cost of Goods Sold:			
Direct materials		\$ 13,300	
Direct labor		16,000	
Manufacturing overhead applied		10,816	40,116
260 hours × \$41.60 per hour			
Gross margin	TBEXAM.COM		\$ 12,644

18) B

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$33,075 ÷ 270 hours = \$122.50 per hour

19) D

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$66,880 ÷ 380 hours = \$176 per hour

Manufacturing overhead applied = Predetermined overhead rate × Actual amount of the allocation base = 360 hours × \$176 per hour = \$63,360

20) D

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$33,075 ÷ 270 hours = \$122.50 per hour

Manufacturing overhead applied = Predetermined overhead rate × Actual amount of the allocation base = 250 hours × \$122.50 per hour = \$30,625

21) A

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$30,510 ÷ 270 hours = \$113 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = (270 hours – 230 hours) × \$113 per hour = \$4,520

22) A

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$33,075 ÷ 270 hours = \$122.50 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = (270 hours – 250 hours) × \$122.50 per hour = \$2,450

23) A

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$85,950 ÷ 450 hours = \$191 per hour

Sales		\$ 157,000
--------------	--	------------

Cost of Goods Sold:

Direct materials	\$ 11,800	
-------------------------	-----------	--

Direct labor	16,900

---------------------	--	-----------

24) A

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$33,075 ÷ 270 hours = \$122.50 per hour

Sales \$ 79,268

Cost of Goods Sold:

Direct materials \$ 12,200

Direct labor 17,400

Manufacturing overhead applied 30,625 60,225

250 hours × \$122.50 per hour

Gross margin \$ 19,043

25) B

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$10,998 ÷ 180 hours = \$61.10 per hour

26) A

TBEXAM.COM

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$10,998 ÷ 180 hours = \$61.10 per hour

Manufacturing overhead applied = Predetermined overhead rate × Actual amount of the allocation base = 130 hours × \$61.10 per hour = \$7,943

27) A

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$35,910 ÷ 27,000 machine-hours = \$1.33 per machine-hour

28) A

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$11,880 ÷ 9,000 machine-hours = \$1.32 per machine-hour

29) D

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$25,500 ÷ 20,000 machine-hours = \$1.28 per machine-hour

Managerial Accounting Edition 18 by Garrison

30) D

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$11,880 ÷ 12,000 machine-hours = \$0.99 per machine-hour

31) D

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$16,560 ÷ 15,000 machine-hours = \$1.10 per machine-hour

Actual manufacturing overhead cost incurred	\$ 16,560
Manufacturing overhead applied to jobs:	
Predetermined overhead rate	\$ 1.10 per machine-hour
Actual hours	10,700 machine-hours
Manufacturing overhead applied to jobs	\$ 11,770
Cost of unused capacity	<u>\$ 4,790</u>

32) D

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$11,880 ÷ 12,000 machine-hours = \$0.99 per machine-hour

Actual manufacturing overhead cost incurred	\$ 11,880
Manufacturing overhead applied to jobs:	
Predetermined overhead rate	\$ 0.99 per machine-hour
Actual hours	7,700 machine-hours
Manufacturing overhead applied to jobs	\$ 7,623
Cost of unused capacity	<u>\$ 4,257</u>

33) B

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = \$7,452 ÷ 230 hours = \$32.40 per hour

Manufacturing overhead applied = Predetermined overhead rate × Actual amount of the allocation base = 180 hours × \$32.40 per hour = \$5,832

Managerial Accounting Edition 18 by Garrison

34) D

Predetermined overhead rate based on capacity = Estimated total fixed manufacturing overhead cost at capacity ÷ Estimated total amount of the allocation base at capacity = $\$7,452 \div 230 \text{ hours} = \32.40 per hour

Cost of unused capacity = (Amount of the allocation base at capacity – Actual amount of the allocation base) × Predetermined overhead rate = $(230 \text{ hours} - 180 \text{ hours}) \times \$32.40 \text{ per hour} = \$1,620$

35) D

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = $\$5,701,110 \div 87,000 \text{ machine-hours} = \$65.53 \text{ per machine-hour}$

36) D

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = $\$5,700,640 \div 88,000 \text{ machine-hours} = \$64.78 \text{ per machine-hour}$

37) B

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = $\$5,700,640 \div 88,000 \text{ machine-hours} = \$64.78 \text{ per machine-hour}$

Actual manufacturing overhead cost incurred	\$ 5,700,640
Manufacturing overhead applied to jobs:	
Predetermined overhead rate	\$ 64.78 per machine-hour
Actual hours	74,900 machine-hours
Manufacturing overhead applied to jobs	\$ 4,852,022
Cost of unused capacity	\$ 848,618

38) B

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = $\$2,835,560 \div 72,800 \text{ machine-hours} = \$38.95 \text{ per machine-hour}$

39) B

Managerial Accounting Edition 18 by Garrison

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$2,836,500 ÷ 75,000 machine-hours = \$37.82 per machine-hour

40) A

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$2,836,512 ÷ 80,400 machine-hours = \$35.28 per machine-hour

Manufacturing overhead applied to Job

Z77W

Number of hours for the job 450 machine-hours

Predetermined overhead rate \$ 35.28 per machine-hour

Manufacturing overhead applied to the job \$ 15,876.00

41) A

Predetermined overhead rate = Estimated total manufacturing overhead at capacity ÷ Estimated total amount of the allocation base at capacity = \$2,836,500 ÷ 75,000 machine-hours = \$37.82 per machine-hour

Manufacturing overhead applied to Job

Z77W TBEXAM.COM

Number of hours for the job 410 machine-hours
