Building Java Programs, 6th Edition

Lab Solutions

Note: Some exercises ask the student to complete something of their own choosing or do not have one specific correct answer. For such problems, the answer will be listed as “(answers vary).”

Chapter 1: Java Basics

1. (answers vary)

```
2. public class MyFirstProgram {
    public static void main(String[] args) {
        System.out.println("Hello, world!");
        System.out.println("I am learning to program in Java.");
        System.out.println("I hope it is a lot of fun!");
        System.out.println();
        System.out.println("I hope I get a good grade!");
        System.out.println();
        System.out.println("Maybe I'll change my major to computer
science.");
    }
}
```

3. (answers vary)

4. Testing, testing,
one two three.

How much output

will there be?

5. Shaq is 7'1

The string "" is an empty message.
\'\"'

```
6. public class MuchBetter {
    public static void main(String[] args) {
        System.out.println("A \"quoted\" String is");
        System.out.println("'much' better if you learn");
        System.out.println("the rules of \"escape sequences.\"");
        System.out.println("Also, \"\" represents an empty String.");
        System.out.println("Don't forget: use \"\" instead of \" !");
        System.out.println("'\" is not the same as \"");
    }
}
```

```
7. public class Spikey {
    public static void main(String[] args) {
        System.out.println("  \\/");
        System.out.println("  \\\\/\\");
        System.out.println("  \\\\/\\\/\\");
        System.out.println("  \\\\/\\\/\\\/\\");
        System.out.println("  \\\\/\\\/\\\/\\\/\\");
        System.out.println("  \\\\/\\\/\\");
        System.out.println("  \\\\/\\");
    }
}
```

```

8. public class Icky {
    public static void main(String[] args) {
        System.out.println("Well-indented programs");
        System.out.println("look much better.");
        System.out.println("Please fix me");
        System.out.println("so I look nicer");
    }
}

9. public class Tricky {
    public static void main(String[] args) {
        System.out.println("Hello world");
        System.out.println("Do you like this program?");
        System.out.println();

        System.out.println("I wrote it myself.");
    }
}

10. (answers vary)

```

Chapter 1: Static Methods

```

1. public class Spikey {
    public static void main(String[] args) {
        System.out.println("  \\/");
        System.out.println("  \\\\/\\");
        System.out.println("  \\\\/\\\/\\");
        System.out.println("  \\\\/\\\/\\\/\\");
        System.out.println("  \\\\/\\\/\\\/\\\/\\");
        System.out.println("  \\\\/\\\/\\\/\\");
        System.out.println("  \\\\/\\");
    }
}

2. // This program prints a pattern of vaguely lantern-like figures.
   // The code uses methods for structure and to remove redundancy.

public class Lanterns {
    public static void main(String[] args) {
        figure1();
        System.out.println();

        lantern1();
        System.out.println();

        lantern2();
        System.out.println();
    }

    public static void figure1() {
        shortLong();
    }

    public static void lantern1() {
        shortLong();
    }
}

```

```

        middle();
        longLine();
        shortLong();
    }

    public static void lantern2() {
        shortLong();
        shortLine();
        middle();
        middle();
        shortLine();
        shortLine();
    }

    public static void shortLong() {
        shortLine();
        System.out.println("    *****");
        longLine();
    }

    public static void shortLine() {
        System.out.println("    *****");
    }

    public static void longLine() {
        System.out.println("*****");
    }

    public static void middle() {
        System.out.println("* | | | | *");
    }
}

```

3. (answers vary)

4. // This program prints a college "fight song" with verses and repetition.
 // The code uses methods for structure and to remove redundancy.

```

public class FightSong {
    public static void main(String[] args) {
        goTeamGo();
        System.out.println();
        bigVerse();
        bigVerse();
        goTeamGo();
    }

    public static void goTeamGo() {
        System.out.println("Go, team, go!");
        System.out.println("You can do it.");
    }

    public static void bigVerse() {
        goTeamGo();
        System.out.println("You're the best,");
    }
}

```

```

        System.out.println("In the West.");
        goTeamGo();
        System.out.println();
    }
}

```

Chapter 2: Expressions and Variables

1.

Expression	Result
12 / 5 + 8 / 4	4
3 * 4 + 15 / 2	19
-(1 + 2 * 3 + (1 + 2) * 3)	-16
42 % 5 + 16 % 3	3
2.5 * 2 + 17 / 4	9.0
4.5 / 3 / 2 + 1	1.75

2.

Expression	Result
2 + 6 + "cs"	"8cs"
"cs 123" + 2 + 6	"cs 12326"
1 + 9 / 2 * 2.0	9.0
46 / 3 / 2.0 / 3 * 4/5	2.0
50 / 9 / 2.0 + 200 / 10 / (5.0 / 2)	10.5

3.

Expression	Result
123 * 456 - 789	55299
3.14 + 1.59 * 2.65	7.3535
2 * 2 * 2 * 2 * 2 * 2 * 2 * 2 * 2 * 2	1024
2 + 2 + "xyz" + 3 + 3	"4xyz33"

4. double grade = 4.0;

5. grade = 4.0;

6. balance = balance + 5;

7. a = 6, b = 9, c = 16

```

8. public class Oops {
    public static void main(String[] args) {
        double x = 0.0;
        System.out.println("x is" + x);

        x = 15.2;          // set x to 15.2
        System.out.println("x is now " + x);

        double y;          // set y to 1 more than x
        y = x + 1;
        System.out.println("x and y are " + x + " and " + y);
    }
}

```

9. `i = 4, j = 2, k = 1`

10. `double y = 12.3*x*x*x*x - 9.1*x*x*x + 19.3*x*x - 4.6*x + 34.2;`

11. (answers vary)

Chapter 2: for Loops

```
1.  for (int i = 10; i > 0; i--) {
    System.out.println(i + " bottles of beer on the wall, " + i + " bottles
of beer");
    System.out.println("Take one down, pass it around, " + (i - 1) + "
bottles of beer on the wall");
    System.out.println();
}
```

```
2.  line  stars
    1      7
    2      5
    3      3
    4      1
```

```
multiplier: -2
shift: 9
```

```
3.      for (int i = 1; i <= 4; i++) {
        System.out.println("2 times " + i + " = " + (2 * i));
    }
```

```
4.  public class SequenceOfNumbers {
    public static void main(String[] args) {
        for (int i = 1; i <= 6; i++) {
            System.out.println(3 * i + 5);
        }
    }
}
```

```
5.  public class SequenceOfStars {
    public static void main(String[] args) {
        for (int i = 1; i <= 6; i++) {
            for (int j = 1; j <= 3 * i + 5; j++) {
                System.out.print("*");
            }
            System.out.println();
        }
    }
}
```

```

12. line  dashes  numbers
    1      5      1
    2      4      3
    3      3      5
    4      2      7
    5      1      9

```

```

dashes: -1 * line + 6
numbers: 2 * line + -1

```

```

13.          line  \   !   /
          1      0  22   0
          2      2  18   2
          3      4  14   4
          4      6  10   6
          5      8   6   8
          6     10   2  10

```

```

multiplier:      2  -4   2
shift:          -2  26  -2

```

```

14.          line  \   !   /
          1      0  14   0
          2      2  10   2
          3      4   6   4
          4      6   2   6

```

```

\ and /:
size 6:  2 * line + -2
size 4:  2 * line + -2
size SIZE: 2 * line + -2

```

```

!:
size 6:  -4 * line + 26
size 4:  -4 * line + 18
size SIZE: -4 * line + (4 * SIZE + 2)

```

```

15. public class SlashFigure2 {
    public static final int SIZE = 4;

    public static void main(String[] args) {
        for (int line = 1; line <= SIZE; line++) {
            for (int i = 1; i <= 2 * line - 2; i++) {
                System.out.print("\\");
            }
            for (int i = 1; i <= -4 * line + (4 * SIZE + 2); i++) {
                System.out.print("!");
            }
            for (int i = 1; i <= 2 * line - 2; i++) {
                System.out.print("/");
            }
            System.out.println();
        }
    }
}

```

Chapter 3: Parameters

1. 15 42
10 25
2. say coke not pepsi or pop
say soda not soda or pepsi
say pepsi not koolaid or pop
say say not pepsi or pepsi
3. three times two = 6
1 times three = 28
1 times 1 = 42
three times 1 = 2
1 times eight = 20
4. to walk the walk is good
to hear the good is bad
to feel the walk is song
to claim the talk is feel
5.
 - line 5: cannot use variable y without declaring and initializing it
 - line 5: cannot declare the type of y in the method call
 - line 6: cannot call printer without the correct number of parameters (2, in this case)
 - line 7: cannot call printer by passing the correct type of parameters (double, in this case)
 - line 8: cannot refer to the variable z: it is in scope inside printer, not main
 - line 11: must provide a type for x
 - line 11: must provide a variable name for the second parameter
 - line 12: must refer to the parameters using the exact same spelling
 - line 13: cannot refer to variables in main that were not passed into printer as a parameter
6.

```
public static void printGrid(int rows, int cols) {  
    for (int i = 1; i <= rows; i++) {  
        System.out.print(i);  
        for (int j = 1; j <= cols - 1; j++) {  
            System.out.print(", " + (i + rows * j));  
        }  
        System.out.println();  
    }  
}
```
7.

```
public static void printSquare(int min, int max) {  
    int range = max - min + 1;  
    for (int i = 0; i < range; i++) {  
        for (int j = 0; j < range; j++) {  
            System.out.print((j + i) % range + min);  
        }  
        System.out.println();  
    }  
}
```

Chapter 3: Return

```
1. double grade = 2.7;
   Math.round(grade);           // grade = 2.7
   grade = Math.round(grade);   // grade = 3.0

   double min = Math.min(grade, Math.floor(2.9)); // min = 2.0

   double x = Math.pow(2, 4);    // x = 16.0
   x = Math.sqrt(64);           // x = 8.0

   int count = 25;
   Math.sqrt(count);            // count = 25
   count = (int) Math.sqrt(count); // count = 5

   int a = Math.abs(Math.min(-1, -3)); // a = 3

2. public static double area(double radius) {
    double answer = Math.PI * Math.pow(radius, 2);
    return answer;
}

3. public static double pay(double salary, int hours) {
    if (hours < 8) {
        return salary * hours;
    } else {
        double regularPay = salary * 8;
        double overtimePay = (1.5 * salary) * (hours - 8);
        return regularPay + overtimePay;
    }
}
```

Chapter 3: Strings

```
1.
Expression                                     Result
str1.length()                                13
str1.charAt(7)                                'a'
str2.charAt(0)                                'G'
str1.indexOf("o")                             2
str2.toUpperCase()                            "GANDALF THE GRAY"
str1.toLowerCase().indexOf("B")                -1
str1.substring(4)                             "o Baggins"
str2.substring(3, 14)                         "dalf the GR"
str2.replace("a", "oo")                       "Goondoolf the GRAY"
str2.replace("gray", "white")                 "Gandalf the GRAY"
"str1".replace("r", "range")                  "strangel"
```

```

2. public class StringOops {
    public static void main(String[] args) {
        Scanner console = new Scanner(System.in);
        System.out.print("Type your name: ");
        String name = console.next();
        process(name);
    }

    public static void process(String name) {
        if (name.equals("Whitaker")) {
            System.out.println("You must be really awesome.");
        }
        name = name.replace("a", "e");
        name = name.toUpperCase();
        name = name.substring(0, 3);
        System.out.println(name + " has " + name.length() + " letters");
    }
}

3. public static void processName(Scanner input) {
    System.out.print("Please enter your full name: ");
    String first = input.next();
    String last = input.next();
    System.out.print("Your name in reverse order is " + last + ", " + first);
}

```

Chapters 3-4: Scanner and if/else

```

1. public class CollegeAdmit {
    public static void main(String[] args) {
        Scanner console = new Scanner(System.in);
        System.out.println("University admission program");

        System.out.print("What is your GPA? ");
        double gpa = console.nextDouble();
        System.out.print("What is your SAT score? ");
        int sat = console.nextInt();

        if (gpa < 1.8) {
            System.out.println("Your GPA is too low.");
        } else if (sat < 900) {
            System.out.println("Your SAT score is too low.");
        } else {
            System.out.println("You were accepted!");
        }
    }
}

2. public class SumNumbers {
    public static void main(String[] args) {
        Scanner console = new Scanner(System.in);
        System.out.print("low? ");
        int low = console.nextInt();
        System.out.print("high? ");
    }
}

```

```

        int high = console.nextInt();
        int sum = 0;
        for (int i = low; i <= high; i++) {
            sum += i;
        }
        System.out.println("sum = " + sum);
    }
}

3. public static void longestName(Scanner console, int names) {
    System.out.print("name #1? ");
    String longest = console.next();
    int count = 1;
    for (int i = 2; i <= names; i++) {
        System.out.print("name #" + i + "? ");
        String name = console.next();
        if (name.length() == longest.length()) {
            count++;
        }
        if (name.length() > longest.length()) {
            longest = name;
            count = 1;
        }
    }
    String fixedName = longest.substring(0, 1).toUpperCase();
    fixedName = fixedName + longest.substring(1).toLowerCase();
    System.out.println(fixedName + "'s name is longest");
    if (count > 1) {
        System.out.println("(There was a tie!)");
    }
}
}

```

Supplement 3G: Graphics

```

1. import java.awt.*;

public class PrettyPicture {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(220, 150);
        panel.setBackground(Color.YELLOW);

        Graphics g = panel.getGraphics();
        g.setColor(Color.BLUE);
        g.drawRect(50, 25, 10, 10);
        g.setColor(Color.RED);
        g.fillOval(130, 25, 42, 40);
    }
}

2. import java.awt.*;

public class Face1 {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(220, 150);
    }
}

```

```

        Graphics g = panel.getGraphics();

        g.drawOval(10, 30, 100, 100);    // face outline
        g.setColor(Color.BLUE);
        g.fillOval(30, 60, 20, 20);      // eyes
        g.fillOval(70, 60, 20, 20);
        g.setColor(Color.RED);           // mouth
        g.drawLine(40, 100, 80, 100);
    }
}

3. stair      x      y      width  height
1            5      5       10     10
2            5     15       20     10
3            5     25       30     10
4            5     35       40     10
5            5     45       50     10

4. public class Stairs {
    public static void main(String[] args) {
