- c. Enabling factors
- d. Beliefs

ANSWER: d

74. Which term refers to a state of complete well-being?

- a. Mind–body awareness
- b. Self-esteem
- c. Health
- d. Holistic spirituality

ANSWER: c

75. What are the eight dimensions of health? How can each dimension be maintained?

ANSWER: The seven dimensions of health and how they can be maintained are as follows:

1. Physical: eat nutritious food, exercise regularly, practice illness and accident prevention, and avoid harmful behaviors and substances.
2. Emotional: develop awareness and acceptance of feelings, express emotions appropriately, function independently, and develop coping mechanisms for stress.
3. Spiritual: identify basic purpose in life; learn how to experience love, joy, peace, and fulfillment; and practice devotion to others' needs.
4. Social: participate and contribute to community, live in harmony with others, develop positive interdependent relationships, and practice healthy sexual behaviors.
5. Intellectual: increase ability to think and learn from life experience, be open to new ideas, and increase capacity to question and evaluate all types of information.
6. Environmental: protect oneself from dangers in the air, water, and soil as well as in products used.
7. Occupational: in college, choose and prepare for a career consistent with your personal values and beliefs; ensure that after you leave college you are contributing your unique talents and skills to work that is rewarding.
8. Financial: the perspective of having a clear understanding of your financial situation, regardless of your income; learn how to manage your money and safeguard your financial well-being.

76. What are the four goals for Healthy People 2030?

- ANSWER:
1. Eliminate preventable disease, disability, injury, and premature death.
 2. Achieve health equity, eliminate disparities, and improve the health of all groups.
 3. Create social and physical environments that promote good health for all.
 4. Promote healthy development and healthy behaviors across every stage of life.

77. Students who engage in risky behavior may not know the dangers. How do college-age men and women differ regarding their risky behaviors?

ANSWER: College-age men are more likely than women to engage in risky behaviors—to use drugs and alcohol, to have unprotected sex, and to drive dangerously. Men are also more likely to be hospitalized for injuries and to die by suicide.

Chapter 01 - Taking Charge of Your Health

78. What factors may contribute to the health and longevity gap between the sexes?

ANSWER:

- **Biological factors.** For example, women have two X chromosomes and men only one, and men and women have different levels of sex hormones (particularly testosterone and estrogen).
- **Social factors.** These include work stress, hostility levels, and social networks and supports.
- **Behavioral factors.** Men and women differ in risky behavior, aggression, violence, smoking, and substance abuse
- **Health habits.** The sexes vary in terms of regular screenings, preventive care, and minimizing symptoms.

79. According to the reading, three types of influences shape behavior. List them and provide examples of each type.

ANSWER: The three types of influences that shape behavior, with examples, are:

1. Predisposing factors: knowledge, attitudes, beliefs, values, and perceptions
2. Enabling factors: skills, resources, accessible facilities, and physical and mental capabilities
3. Reinforcing factors: praise, rewards, encouragement, or recognition for meeting a goal

80. Recognizing reputable online sources and credible media outlets is important as consumers are turning to digital information sites. What are the guidelines for evaluating health information websites?

ANSWER:

- Check the creator. Websites are produced by health agencies, health support groups, school health programs, health product advertisers, health educators, and health education organizations.
- Check the date. If you are looking for the most recent research, check the date the page was created and last updated as well as the links. Several nonworking links signal that the site isn't carefully maintained or updated.
- Check the references. As with other health education materials, website documents should provide the reader with references. Unreferenced suggestions may be scientifically unsound and possibly unsafe.
- Consider the author. Is the author recognized in the field of health education or otherwise qualified to publish a health information website document? Are the author's occupation, experience, and education listed?
- Look for possible bias. Websites may attempt to provide health information to consumers, but they also may attempt to sell a product. Many sites are merely disguised advertisements.
