Chapter 01

1. Which options do not relate to the importance of critical materials?
   a. Possess unique chemical and physical properties
   b. Are vital important to industries
   c. May be vulnerable to disruptions in their availability
   d. Are never vulnerable to disruptions in their availability

ANSWER:	d
POINTS:	2
DIFFICULTY:	Easy
QUESTION TYPE:	Multiple Choice
HAS VARIABLES:	False
LEARNING OBJECTIVES:	LO1.1 - Explain how critical materials are important to the national and global economies
TOPICS:	A-head: Critical Materials

25. Why is a strong, transparent outer layer important for ITO thin layers in consumer products?
    a. Because ITO layers are brittle and need protection to ensure durability.
    b. Because the outer layer enhances the electrical conductivity of ITO.
    c. Because ITO layers absorb too much light without an outer coating.
    d. Because the outer layer increases the checkerboard pattern's visibility.

47. Gorilla® Glass is a popular material that starts as aluminosilicate glass, like many other types of glass. What makes it resistant to breaking is that it is treated in a second process called ion exchange. What gets exchanged in this process?

    a. Potassium replaces some of the iron in the glass.

    b. Potassium replaces some of the lithium in the glass.

    c. Potassium replaces some of the sodium in the glass.

    d. Potassium replaces some of the carbon in the glass.
